From: "Larry Menzel"
Subject: FS: Mil-Spec Tube Tester

For sale: MilSpec Tube Tester. This is a mint shape unit. Orignally built
for the military, it is an I177B Dynamic Mutual Conductance tester.
Includes tube book...dated 1950, but updates may be obtained or so I'm told.

This is a true dynamic mutual conductance tester (can measure actual
micromhos or be set to indicate good/replace) that tests for shorts and gas.
Has 6 different test sockets- 4 pin, 5 pin, 6 pin, 7 pin, octal, loctal,
noval,
miniature, and acorn.

I'll send you a jpg upon request. It's in really beautiful shape.

Buyer pays actual shipping cost. This unit weighs about 20 lbs and is very
nicely portable with lid and handle and spring snap closures.

$140 plus actual shipping cost.

Subject: fs: Palomar 40-10 mtr Tube Amp, 7 in=300 out!

Probably deleted because it's a non-type-accepted, commercially (not home) built
amplifier which includes coverage of the 11 meter band.

They are almost paranoid in keeping the government off their backs over there. I
imagine if you had a one-channel high-band scanner and said it was "unblocked"
(it is, right?) E-bay would delete it. (grin)

From: plmills@attglobal.net
Subject: FS CD's with tube data and mil ba books

I have 3 different CD's for sale. Each contains books and manuals
in Adobe .pdf format. There is an installable copy of the Adobe
Reader 4.05 on each CD for anyone who doesn't already have it.

CD #1 -- Tube data. Eimac 1948 and 1975 catalogs with tube specs.
RCA TT-3 and TT-5 air cooled transmitting tube guides.
RCA RC-22 receiving tube manual. GE Essential Characteristics
receiving tube manual.

CD #2 -- Surplus conversion info. Command Sets, Surplus Conversion
Manuals vols 1, 2, and 3. BC-312, BC-342, BC-348 manuals.
Guide to Aircraft Radio Corporation Receivers. Index to
Surplus listing articles in QST, CQ, and 73 magazine.

CD #3 -- Military equipment manuals covering T-195, T-368 (through
E model), BC-610 E thru I, BC-312, BC-342, BC-348, BC-614
speech amp, ME-165G wattmeter, URM-25D signal generator,
R-274 receiver (SX-73), Military tube cross reference, and
BC-1031 panadaptor.

Each CD is $10 which includes first class postage in US. If you
would like any, please e-mail me at plmills@attglobal.net.

thanks,
Phil

OUT of curiosity Tom did you make your selection base purely on printed specs - or in actual, direct, real-life on-air comparisons? After all, individual units DO display performance variations from unit to unit, and it's what they actually do in YOUR specific environment that counts - NOT what shows up in a scope in some obscure distant electronics lab - and THAT was MY point... NOW, if the "ergonomics" and "blue display" was the governing factor, that's another thing...

Subject: Info on the Icom 761

Hi,

I would echo John's comments - I've a 761 and it's a fine rig.
Synthesiser noise is present when tuning, especially on the
higher bands but is not a problem. I spoke to ICOM UK about
it and it appears it's normal. As I say it's not a problem.

I also find the built-in auto tuner works very well. Using
my Carolina Windom which gives pretty high SWR on most
bands the tuner happily copes (better than it's rated 3:1 or
less rated capability).

As John says, the transmitter sounds nice, the receiver does too.

Oh and if it does give problems the Handbook is excellent and
there a list of known problems and cures on the ICOM America
web site !

Cheers de John GW3VVC
Island of Anglesey.

From: "Mike Yetsko"
Subject: ISO Icom IC-2A PTT Switch

All Electronics and places like DigiKey routinely sell those little switches. While I don't know EXACTLY what switch is in the IC-2A, you might be able to kludge something in.

If you do buy generic, be aware that some of those switches DO NOT short, they just go from high resistance to moderate resistance. This is actually ok in most matix applications.

I had to repair a radio in an old Dodge Caravan that had a soft drink splash on it, and it took out about 5 or so of the buttons. They aren't hard to replace, but if you can't get exact, get one that is not as 'TALL' as the original. You can always space it up, you can't always easily cut it down.

I'd have to actually look at my IC-3AT to see what the switch is.

Mike

From: "Derwyn Williams"
Subject: re : cr100 or b28 I THINK

Hi All

Just got myself what looks like a CR100 or B28 with a few small problems.
100hz ripple on CW and SSB. Broken drive-cord on wavechange switch.
Powers up and receives signals. Need schematic, picture to confirm model.
(no name plate).

6 Bands. 60 kHz to 30 MHz
Noise blanker. Bfo. Variable bandwith 100Hz to 6000Hz. 12 tubes. RIS input
blanked off. Hole in panel labelled RIS. Blue front panel white lettering.
Black case. Weighs about 70 - 80Lbs

Any other info or mods appreciated.

Thanks

Thanks very much for the plug!

For beginners I would urge you to not use the ftp URL, but rather go
to the web front page at http://bama.sbc.edu
There are links from the front page to pages for info on downloading,
viewing, printing and scanning as well as the various equipment areas.

Subject: Yaesu FTdx560...about to buy...Comments?

I'm one of those terrible "new" hams (tho have been around amateur radio for many years...just went into the computer field instead of amateur radio) who will soon be upgrading to General. I want a CW rig which is also SSB capable and found an old FTdx560 for sale. Cheap enough, and a good tinkertoy. Price is $150, unit was in use until last month. Finals are good but a bit weak, receiver seems strong. I've already received several pro/con comments, but would appreciate any further comments from those more experienced. I'm experienced in tube gear repair, tho light on recent practice. Any helpful comments?

For the OT's, yes, I DO plan to use CW some, tho not as much as some of my old ham buddies who have years of experience. I find it as interesting as stitching Grade A cotton onto a AirKnocker wing or for that matter, onto a Monocoupe D145 or 110 Special (certain NC hams, esp. oldtimers, will understand). Keeps some of the flavor of WHY amateur radio exists. And, no, I never was a CB'er. Hope to meet many interesting folks <> on the HF bands in the near future.

Hi folks,

I am looking for a range switch and the frequency preselector range indicator for a Drake SPR-4 RX. Can anyone help with locating them?

Thanks in advance

Mark

Didn't those have an 11 meter position on the band switch? Wasn't 11
meters an amateur frequency back when those rigs were made? I don't
know this, just asking!

11 mtrs was cb when they were made...however the 101E had 11mtr on the dial..plus 10a 10b 10c 10d...pulled the xtrals from 10 and 10b then reinstalled ones that would go "below" one and above "23"..thats all I did to install them...more likely the salesman plugged them in at the time...hardly what I would call a tech job...but it could happen...who knows maybe he has a buddy that works at yaesu.....I have to say that I LOVED my 101E one talking fighting machine...in fact I am in the process in getting it restored to 100% working order (nothing wrong with it..just tuning and tweaking abit) then it will once again be on the air!!!

I have a TR-75 TV that is operational and looks real good. If I can borrow a digital camera, I'll try to get some pics - remind me and I'll send them to those that request them. (Be patient!) I also have the earlier TR-75 (no cover, all "surplus" parts). This was my dad's first transmitter and I rebuilt it when I was a Novice in 1974. It has more "character" than the covered-up 'TV version! I would like to find the matching modulator that was available - MD-40, I believe. Any leads? Otherwise , I'll homebrew one.

I gave mine away in '63 when I joined the Navy. Before that, after getting nailed a couple of time by the B+ when changing bands. It had a series tuned link coupled final tank with plug in coils. I converted the output to Pi-network and built a 12AX7 - 12AU7- with a pair of 2E26's as a modulator with a power supply into the space where the PA tuned circuit had been located. It worked quite well.

> 'Doc

Yes Doc they sure did !!!.

Yaesu made FT101E's for various markets around the world and the 27 Mhz band was allocated in Australia as an Amateur band up until some time in the 1970's before it was allocated to CB..

I had an FT101E with the 11 Metre band installed at the factory and the Band Switch position appropriately engraved on the front panel. According to the instruction manual supplied the FT101E covered the range of 26.9 to 27.5 Mhz. and the crystal for this range is listed in the parts list as well.

The Australian Amateur 11 Metre band was 26.96 to 27.23 Mhz.

Perhaps the one that you are enquiring about was an FT101E designed for the Australian market or some other area where Amateurs still had the 11 Metre band allocated to them

Hmmm...dont' know about that one. If I was running Drake I would not resume manufacturing amateur equipment just because a bunch of hams signed a petition. Like it or not, Drake is in business to make a profit, just like any other business. I guess the question is, can Drake compete with such companies as ICOM, Kenwood and the like. I too would like to see them start back into making amateur radio products, but I don't think I would invest my life savings in their stock if they did. That market is not very large and is very competitive right now.

That's just my 2 cents worth.

Hammarlund HQ170.

Condition good, some typical paint scratches on case repairable with
re-spray.
Couple wear marks on front panel.

In good working condition but could use a good alignment.

If interested, email a request for a frontal pix.

$250.00 + shipping

Hi,
I need a HP 8640B junker, or a few parts from same:

The RF oscillator assembly.
The two big RF IC's
The gear and knob on the FM deviation shaft.

Please let me know if you have a junker or these parts!

Willing to pay reasonable $$$.

Thanks,

George

I don't think that I will be signing the
Drake petition.

Please consider Drake's latest attempt
at marketing a Ham Radio: the $600
2-Meter rig. Wonder how much Drake
lost on that one. With this track record,
I would imagine that an HF rig would
retail for about three to four thousand
dollars. The Drake-lovers would sure
have to dig-deep for that one!

How can an American manufacturer
compete with Icom et al? Consider
the 706MKII with DSP being closed
out now for 800-900 dollars.

I think that Drake is smart enough that
the hams could never support their
operation. The SWL's seemed to have
propped up the Company for awhile.
I'm not sure if that is still happening.

Look at Drake's latest SWL offering:
the "repackaged" SW-8 sold by Grundig.
Imagine how betrayed the folks that
shelled out 800 smackers for the SW-8
feel now that Grundig is selling the
same radio for 2-3 hundred dollars less!

I think that before Drake re-enters
the ham arena.....they need to go
back to Marketing-101.

Subject: "FREQUENCY" --- My Old Man

I dragged out my old SB-102 out of the basement last nite and fired
it up. Unkown to me....a great solar flare and ion storm was raging
at the same time.

I was tuning around on 15-Meters when I heard my Old Man's voice
eminating from the 5X7 oval speaker. I was communicating with
my "Dad"....it was him - - - The Old Man!

Talked to Hiram for several minutes before the pile-up ensued and
I went QRT. Anybody else work him?

The Old Man didn't like it when I tail-ended his last QSO. I
took a terrible beating from the Wouff Hong and Rettysnitch that
materialized out of the ether above my 10KW Collins Autotune.
The ingrate also refused to QSL. See if I work him again.

I don't think people were as stupid back then as to debate how many angels could dance on the point of a steel phonograph needle. Most of them had actual lives then also, so that they had better things to do.

Subject: Boatanchor question

I'm thinking about buying a used (there's no other kind of course) boatanchor. I'm getting back into ham radio after being out for about 20 years. When I was a kid I had a Hallicrafters SR-160 and a friend of mine had a Heath HW-100 so I have an idea what it takes to tune and maintain one.

With tubes getting more and more expensive and rare which boat anchors can be recommended for using a majority of available tubes and having inexpensive finals?

Thanks.

I have for sale a very nice Heath/Daystrom HD-11 Q-multiplier.
This one has the two-tone green paint scheme with glossy paint.
The front panel is excellent, with only the slightest hints of
wear, and the paint is mirror-like in its shine. The original
knobs are also excellent. Inside, this is one of the cleanest
pieces of 1950's gear I've ever seen... it literally gleams.
There are some paint chips on the cabinet, and there is an area
on the rear panel that looks as though someone may have spilled
alcohol on it (the paint is intact, just discolored somewhat).
This is not a real common item, and this one is THE nicest of
its kind that I've ever seen. It is untested, although it sure
looks like it ought to fire right up. The power and RF cables

are original and nice. Price? $60.00 -postpaid- in CONUS.

73,
Dean, K5DH

From: Jim/Julia
Subject: HF military radio collector's net!

Hre is a listing from rec.radio.swap. It's a fun group. Please join in.
Thanks. Jim W7LS

For those into military radio gear, there has been an on-the-air
net on the amateur 40 meter band. This net has moved to a
new time:

COVERAGE AREA: US West coast to parts of the Midwest..
TIME: Wednesday evenings at 9:00 PM Pacific Time
FREQ: 7296.00 KHz, Upper Sideband

Anyone reading this in time, may be able to check in to our net
that will be on the air this evening since it is Wednesday .. :-)

Upper sideband is used so that those, having military HF radio
gear that only has USB, can check in without having to modify
their equipment...

This net is hosted by the members of the "armyradios" mailing
list, located at
and consists of about 225 members currently..

For further info, see:

Thanx for reading this ..

Subject: IC 746 VS FT 920?

As a new HAM I considered both radios. There was just something about the
audio of the 920 that sounded better to me. I too often hear from
experienced operators their preference for the 746 with little
underestanding.

How did I solve this dilemma? I bought an Elecraft K2!

From: Steve Fried
Subject: Wouff Hong

For Trade or Sale (prefer trade)

One each only Wouff Hong.

The wouff Hong is restored and working on all bands (does not include WARC frequencies).
Full output. This is one of the earlier models made, thus the sensitivity is fantastic.
It is somewhat heavy as the older models tended to be built better and was not solid state.
I believe this is a 1956 model, but not sure (it has the double horizontal straps).

Due to its age, it is being sold as-is. But it is working and in good order.
I think any owner would be proud to display this as a center piece for their collection.
However it still can be used fully for its original intended purposed.
There is probably more need for a working Wouff Hong now, than any time in Ham Radio.

I have actively used the Wouff Hong and have testimonial letters attributing to its fine results.
(Due to current laws, it is sold only as an "entertainment device" and no claims are made herein)

Will entertain bids over $1000 or take interesting items in trade.
(This is the model made in Newington, Connecticut - before incentive licensing)

Will not sell to unlicensed party. This model was written up in QST in the very early fifties.
I think it was an article by W1IOU, Larsen Wrapp. Please check it out.

Respectfully Submitted,

Steve k2pts

Subject: Wouff Hong

Would anyone know the mod to get this thing going on 160M? I have a '30's version that I would like to put on there. I think it's got something to do with adding extra inductance to it's coils. Also, would 160M coils from a BC-610 work on this model?
I know of a fellow or two that had it done to his '50's vintage model. I have one I currently use on amplitude compandered sideband with a homebrew adapter. I use a B&W product detector I rigged up to it's two IF's. I use it strictly on 75 meter phone (I know it's bandwidth is rather wide)
Old H.P. Maxim really know his stuff when he came out with this thing! It sounds even better than a CE-100V!

From: Randy & Cara Randall
Subject: Yaesu FTdx560...about to buy...Comments?

Watch out for heat damage to the PCB around the audio amplifier tube 6BM8 I think the number is. Mine has a warped PCB in that area and the traces are lifting off of the board There was a problem neutralizing american 6KD6 tubes. There was a service note available from Yaesu on this. I do not have it, but wish I did. I

have two FTDX560's and will have a good working one by this winter when time permits. There was a fan option for this rig and if you do not have it, it would be an excellent idea to hang a 4" muffin fan on the back of the radio behind the PA cage. The thing gets mondo hot without it.

Hi all;

I'm looking for a good condition Ten-Tec mode 405 amplifier. Must be operational, non-smoker. VG to E physical condition too, manual would be a plus.

Please email to NeilR@innermedia.com

or you can call me toll free at (800) 962-2949

Thanks!

Neil, N1DMA

I have a TR-75 TV that is operational and looks real good. If I can borrow a digital camera, I'll try to get some pics - remind me and I'll send them to those that request them. (Be patient!) I also have the earlier TR-75 (no cover, all "surplus" parts). This was my dad's first transmitter and I rebuilt it when I was a Novice in 1974. It has more "character" than the covered-up 'TV version! I would like to find the matching modulator that was available - MD-40, I believe. Any leads? Otherwise , I'll homebrew one.

I gave mine away in '63 when I joined the Navy. Before that, after getting nailed a couple of time by the B+ when changing bands. It had a series tuned link coupled final tank with plug in coils. I converted the output to Pi-network and built a 12AX7 - 12AU7- with a pair of 2E26's as a modulator with a power supply into the space where the PA tuned circuit had been located. It worked quite well.

Just an observation -- I see four non-standard knobs on the 180C....the rx
may work
fine, but the knobs do detract from it from a collector's standpoint.....

Hmmm...dont' know about that one. If I was running Drake I would not resume manufacturing amateur equipment just because a bunch of hams signed a petition. Like it or not, Drake is in business to make a profit, just like any other business. I guess the question is, can Drake compete with such companies as ICOM, Kenwood and the like. I too would like to see them start back into making amateur radio products, but I don't think I would invest my life savings in their stock if they did. That market is not very large and is very competitive right now.

That's just my 2 cents worth.

Sounds like it is a marketting tool to gauge how much interest there is in resuming production. Can't blame them for that! Jim W7LS

Subject: WTB good used 8950 tube for Siltronix 1011- C

Would anyone have a good used 8950 tube for a Siltronix 1011-C for sale?
Also, would anyone know of any substitutes for this tube? Thanks for reading
this and 73.

Hammarlund HQ110.

Condition good, some typical paint scratches on case repairable with
re-spray.
Couple wear marks on front panel.

In good working condition but needs a good alignment.

If interested, email a request for a frontal pix.

$150.00 + shipping

<snip>

Well...have you priced FT-1000D's or
IC-781's recently? (not to mention
Signal One Mil/Spec 1030c's) ;-).
My contention is that a properly marketed
xcvr version of the R-8A (TR-8A?) that
hit a price point close to that of the Omni VI+
and incorporated the same type of feature set:
DSP, multiple IF filter selection, full RS-232
control, full QSK, separate RX ant switching, etc.
could have the potential to be a bigger 'hit' for
them than many might imagine.
I love my TR-7A (and my 'B-line' and my
TR-4Cw/rit etc.) but folks who are serious
about contesting these days are not willing to
forgo computerized rig control.
That being said, the sheer volume of things
showing up on eBay being auctioned off to
'benefit' the Drake ARC (coupled with the
decision to stop servicing the -7 line gear a
while back) does not do a lot to engender
'warm and fuzzy' feelings about R.L. Drake Co.'s
future corporate direction re: the Amateur
Radio Service.

the yeasu ft-101-e 11 meters was an option from the factory. otherwise the band switch was marked AUX,(meaning auxilary position for crystal of your choice from 20 to 30 Mhz.) 10A, 10B, 10C, 10D. read the owner manual.

11 meters was installed as an option, but the transmit was disabled. there
was a wire that had to be removed to recover transmit ability.

My Swan 260 also uses a 6LQ6/ 6JE6, which melted down. The problem is spending
$60 or so to fix up an old mediocre rig. Barry, is your definition of "living on edge"
refer to a not so
robust output stage? The worst part is that I had tons of these horizontal output tubes in
my old
tv repair days.

Collins 51-S1 general coverage, round emblem, Sr#5464 excellent receiver in cabinet. Not mint, but very clean, and just completely overhauled, aligned and calibrated by a qualified radio amateur specializing in Collins 51-S1 repair. Works like new, and ready for another 35 years of service. Located in the Dallas area. $1550 plus shipping.
Thanks...WB5LXZ

1926. Re: Pls explain -- eliminating hum in speech amp?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-09 00:00:00 UTC
From: Bob <balbert@cnmnetwork.com>
Message-ID: <W46S4.69180$MB.1448995@news6.giganews.com>
Source record: 66933

The rationale for that hint is that some tubes have heater-to-cathode leakage that causes hum in the amplifier. Raising the heater potential reverse biases the parasitic diode that the heater and cathode create, and prevents current.

The whole thing is rather worthless actually. If you have hum from that cause, you need to replace the tubes with good ones that don't have heater-cathode leakage.

The amount of potential required is such that, even on the peaks of the heater supply, the diode never gets forward biased. So the value given applies to 6.3 Volt systems.

In general, if you have hum, the way to eliminate it is first to find the cause, then take measures to eliminate it. The scheme above only works if that's the source of the hum.

73, Bob K6DDX

1927. What If .. No xsistors

Sitting around last night, an odd thought popped in my head (fairly normal occurence)-
Where would we be if transistors had never been invented (and therefore none of their progeny (ic, etc.) had ever been developed).

Imagine here we are, in May, 2000 with 40 more years of vacuum tube development under our belts. Would radios be significantly different than they were in 1960? Had tubes hit a plateau in development by that time? Was there anywhere else to go? Seems like we were seeing multiple uses stuffed in one glass envelope, would that have continued and grown, until we had something akin to large scale integration with vacuum tube devices?

Any ideas?

Dave: Interesting question. I don't have a really serous response,
but your message brought to mind a sidebar cartoon in a magazine
article. It claimed that if you tried to build a modern cell phone
with our beloved tubes, the thing would be the size of the Washington
monument. Certainly would cut down on the cell phone car accidents!
REAL CELL PHONES ARE 1000 FEET TALL!!!!!

Have a good response for you... basically Nuvistor development would have continued. During the 60's, there was all sorts of interesting research going on in making smaller and smaller tubes. Those of us around know that many companies made small battery powered AM and FM tube radio sets.

The end of tubes was caused by (1) the fact that transistors could be produced cheaper and faster and (2) they would withstand greater shock than glass or metal tubes.

And so tube development and research stopped and the solid state era began...

Well I am more than happy to tell you it is now... - ENDING - ....

NO that 12AX7 and 6L6 is not coming back into your stereo!!! But very promising research is being done on Nanotube technology. Basically packaged as a solid state device but with this technology you can "potentially" reduce power and increase active device count.

Nanotubes currently act as mini-triodes (some researchers already claim pentode actions) and you can fit hundreds of them in the space of a single P/N junction!!! Building them with current sub-micron technology is pretty simple. Many of the big electronics companies are involved so much of this is HUSH HUSH as the patents go flying out the door to DC but as with anything cool - many scientists have web sites up and running...

Suggest you do a search on "Nanotubes". There are thousands of sites now up.

What was once old is new again.... Who wudva thunk it??? !!!!

At the risk of perpetuating a flame war in an inappropriate newsgroup,
Maxim was a leading-edge kind of guy. If he were around today, I'd like
to think he'd be hacking DSP code and working PSK31 moonbounce, or
something.

If he were still into CW in the year 2000, it'd be a relaxing hobby for
him, not a pathological obsession or a hazing ritual. My guess is, ol'
H. P. wouldn't be into the whole death-knell-of-ham-radio thing.
Someone like that keeps his eyes on the horizon, not the ground.

I beg your pardon OM, were you referring to my followup?

I posted a response in jest (that's amusment to you). May I also
suggest you consult your Webster's for the definition of narrow-minded
and bigoted of which neither word applies to anything discussed. The
original post in this thread was written by WB9GKZ to
elicit amusing responses and nothing else.

I do agree that H.P.M. was a man ahead of his time and a great visionary
as were others in his family.

From: W-A-S-P@exhjinc.net
Subject: ,,~~Advice For New Immigrants~~...

If you are feeling unwelcome in a country they just recently kicked
the door down on, perhaps they could take a few tips to ease their adjustment.

And a few social tips:

1. Understand you are in a foreign country, probably illegally. The
language barrier is of your own making and is not a responsiblity of the
host country.

2. Stop complaining. No one owes you anything, and the freeloader and
whiner rolls are already full. Remember that you would not remain here
unless the situation was much better than at home.

3. Expect that most people you meet will honor your culture, traditions and
laws only to the extent that you honor theirs. Understand too that illegal
immigrants come from the back of the line in their own country and their
presence causes a burden on the social and economic resources of the
communities they settle in. Since many of you are poor and unskilled, you
wind up on the welfare rolls. Those who do pay naturally resent your hands
in their pockets. Many workers, especially in the construction industry,
have been displaced since your arrival.

4. No nation is morally or legally obligated to accept another nation's
underclass. Therefore, since legal immigration is a privilege, it is best
to be grateful. And since illegal immigration is a crime, it is wise to
stop demanding all the time.

Which leads last to point #5;

5. Obey the immigration laws of the country one currently finds oneself.

Of course, compliance with #5 would eliminate the problem altogether since
most of those who are complaining of feeling unwelcome would have to leave.

Only in America!

Subject: Boatanchor question

> If you are going to get boat anchors why not get them for am.

Amplitude Modulation is boat anchor.

SSB is just something any one does.

How about a Viking 1 or Valiant or Ranger and a good boat anchor receiver like a
Hammarlund HQ140 or HQ150?

Hi Scott - How about that, the old SR-160 was my first SSB rig 27 years ago! Great little tri-bander - had a wonderful time and many great memories with her. For example, never EVER try to remove those 6HF5 finals while the rig is powered up! I touched the B+ and it flipped me over a metal chair. I was out for 1/2 a second and when I came to I was on the floor on my back looking up at the ceiling. Radio playing in the corner like normal.

Dad walks in - sees the radio and then sees me on the floor, legs dangling over the chair on my back looking up at the ceiling.

I tell him "I'm just tuning around on twenty meters". He looks at the SR-160 in the corner and me on the floor. He just turns around and walks out - not saying a word but shaking his head.

Ahh what memories! Traded that old SR-160 for a Galaxy III and now I wished I had them both !!!

OK Scott sorry for that... but some of these old rigs bring a tear to my eye. Many of us have given solid state the heave ho. While tubes are not .50 like they used to be in the 50's, they are not that expensive either. Most of the boatanchors from the 60's used TV sweep tubes. Some like the 6LQ6 and the 8950 have gotten pretty expensive if bought new or from eBay. But they are pretty cheap if you go to a local hamfest or ask around. Went to the OKIE City hamfest 4 years ago and bought a few 6LQ6's for only $5 each. I also bought a dead Swan Cygnet (270B) for $50 for parts. Replaced one little resistor and got it working again.

I now operate daily with that Swan Cygnet (with 15 yr old finals) - Halli SR-400 Hurricane and for CW - a Johnson Viking Navigator XMTR and for RCVR a HQ-One Eighty.

so...I recommend you look for a nice SR-160 and a D-104. Put up a 40M dipole and kickback and enjoy it. Relax about those finals.. you can find them for next to nothing if you look. And if you know how to tune a rig and have a good antenna they should give you many years of good service.

Buy a nice emission tube tester for $25 and prepare a list of replacement tubes you can bring to the hamfests to wheel and deal. You can then go looking through old boxes UNDER the tables...

Just like the rest of us!

Subject: Boatanchor question

The Hamurland and Johnson are good rugged choices. Look for rigs with 6146 finals. There are a lot of these tubes around and are still pretty cheap. The 6CL6 oscilator/drivers are still easy to find also. These tubes were used in a lot of the commercial two-way radios so they should be around for quite a while. I would stay away from rigs with TV sweep tubes. Many of the circuits they were used in are pushed to the limits and the tubes are getting hard to find. These tubes were not designed to be HF RF TX tubes. The 6146s were designed specifically for RF application.

Its a Navy shipboard unit. Comes in a 6' rack and runs or 110 60Hz.
Remote coupler to 26-32' whip. Runs a pair of 4CX250b's, as I recall.
The straight model has 1 Khz tuning, whereas the "B" model will give you
finer resolution. I had 2 of them. They worked...but what beasts!!! I
traded an R-390 a for them. Don't know what they're going for now.

A couple of questions:

What frequencies were the URC32s capable of?
What is the approximate vintage?

I think I remember servicing one of these in the late 50's.
I really liked it. I stayed on the air for over two years
of abuse with only one repair (screen bypass cap that
went short). It took me less than 10 minutes to have it
back on the air.. If this is the unit I remember, it really
outperformed the other manufacturers. The secret seemed
to be ventilation and the 4CX250's....

Sorry about the nostalgia.. Bill

2-32 MHz at about 500watts. Someone else was inquiring, also. Maybe
they're coming out of the woodwork now. I was a NAVOCEANO civ. on a
UNITAS cruise on a DE. We had 3 of them. I understand from some ex-sub
sailors that that rig was designed for the sub service, but adopted for
skimmers, too. The 1 kHz channel spacing was not good for ham use. I
had one straight and one with the modified "B" synthesizer. I ditched
(er...found them a good home) mine for $100 each. Maybe I should have
kept one?? (Naaa!) 73

Subject: First-hand account: POW Radio

This was posted on the ham radio history list; thought you folks
might enjoy reading it.
73, Jeff KH6O

Construction of radio equipment in a Japanese POW camp.
By Lieutenant Colonel R. G. Wells
Transcript of a recording by Lieutenant Colonel R GWells, on the
construction of radio equipment whilst in a Japanese Prisoner of War camp
after the fall of Singapoore
It was about the beginning of 1942 when I was aprisoner of war of the
Japanese, when I was ordered to go on a working party which eventually
finished up in the Sankakan in British North Borneo. Two thousand odd of us
were in this work party and it wasn't long before we noticed the absence of
information as to the international situation, what was happening in the
outside world, and the whole camp had a real craving to get news by whatever
means. Escape parties were being organised, but none of these were very
successful. The next thing people turned to was a means of getting some
radio news, and this is where the building of a radio set became an urgent
requirement.
The main thing, of course, was that we didn't have any components and
although we had some contacts outside which later on were helpful in the
building of this receiver, it limited our requirement to a regenerative
receiver as from a superheterodyne receiver and the decision to do that was
borne out by the results.
The high frequency spectrum during that time of the war was fairly quite in
that part of the world and the BBC, we hoped, would be able to be received.
This was aided by the fact that the Japanese in their wisdom called a friend
of mine out one evening to repair their radio set and he took the
opportunity, of course, to switch over to the shortwave bands, with
headphones while doing that, and picked up the BBC successfully. That day
was memorable because it was the day that the BBC broadcast the death of the
Duke of Kent in an aircraft crash. That was the only news we had of the
outside world for something like six months.
The plan was made to begin building the radio, so until we could build
components, there was nothing much we could do. A look at the circuit
diagram of a regenerative receiverindicates a number of capacitors - about
two or three are required -low capacitors to make the oscillating part of
the system work, and infact from memory we needed in the grid circuit at
least one ".01 microfarad" capacitor and there was no chance we could get
this anywhere, or any other components. So we hit upon the idea of taking
some tin foil or aluminum foil from the lining of the tea chest from wich
the Japanese suppled with the rice rations, then by the well known equations
for calculating capacity and the relationship of the surface area and
spacing of the plates, we built a capacitor or, at least, I built a
capacitor which according to calculations should have been about ".01
microfarad."
If I could put an aside here, I built a replica of this capacitor some years
ago, and it went out to Simpson barracks wherewe had some friends in
thetesting laboratory, and with great excitement the Warrant Officer

concerned said, "We will see how good your calculations were"; so he put it on his equipment which was accurate to many decimal points and read on his display unit, ".009 microfarad", so we thought we were pretty good. I said "Touch" to him because he didn't think we could do it. I made two ro three of these, and I still hae one of them that would work if I built the receiver again, which I have been thinking about doing, except there is always something else, like a lot of other projects which one has as one gets older.

The resistors were another problem. We found out that we could use the impurities in some of the tree wood and the bark, particularly cinnamon bark bark which was available by getting through the wire only about 2 feet and we could normally pinch that while the Japanese sentry was moving around. We used a piece of string with the material rubbed on it from the burning of the cinnamon bark with some impurities in it (we didn'thave a chemical analysis); we weren't very fussed because most grid-leak resistors were about a megohm or thereabouts and we had no means or any way we could measure a megohm, so it was largely a trial and error thing to see if it would work. We made a number of these bits of string and tied them round different things to dry them out to get the thing going. Eventually about an inch, three quarters of an inch to an inch, was about the right order of things to get about a megohm resistance. They were the two main things.

Now the things we couldn't provide, couldn't do. We had to make coils; they were largely trial and error, one could calculate the inductance of these if one had access to some means of measuring the wire gauge and the space between them. So that was largely a trial and error business.

The two biggest components, or two biggest requirements, were we needed some headphones and we needed a valve, and I thought that the rest could be made locally with a bit of luck. On the question of the headpiece an outside contact smuggled in one headphone, which was better than no headphone, and a valve - no valve holder but one can't have everything in this life.

The other trouble was the power supply. The Japanese main around the camp which provided the power was 110 volts roughly according to the power station meter which we couldn't help but see, because we delivered the wood there while the power station was running; I switched over when no one was looking and the frequency was about 60 Hz, not 50 Hz as we thought, not that this worried us anyway but to know that it was manageable.

So two problems remained for the power supply. The first one was the A-battery or low voltage supply necessary for the filament of the valve. We started with a couple of dry cells, but these didn't last very long and we had to make something then. Through being friendly with the pharmacist with the party, we got some potassium bichromate and made up a bichromate cell, which is probably well known in the text books but not of very practical use. It's fairly hungry for zinc and it needs some sulphuric acid which one can't throw around or hide easily, but it served for some time and was quite successful but, in the end, had the operation lasted very long, we would have been in trouble for that. Two of these cells provided about 3 volts to 4 volts, and 6 volts was a bit too much because each cell was running at a bit over 2 volts, about 2.2 volts.

The biggest problem was a rectifier to rectify the AC into DC without dropping it to a low voltage, because remember in those days we needed high

voltages for the B supply, or anode supply, but in these days we bring everything down to small DC voltages; we needed to get them up as high as we could. That was a partial failure in that using aluminium foil again and oxidising one piece of it, or length of it folded over, with some weak acid and then using the two electrodes, one of clear aluminium and one of a zinc salt and aluminium, we could make a rectifier. We wouldn't be so audacious as to call it a rectifier now, because it had a reverse voltage of something like 30 or 40 volts, which wasn't exactly ideal, but for DC we had no option. The result was that I made a bridge rectifier but the only problem was that after 15 minutes the electrolyte began to boil, so it was really passing current in both directions but a little bit more one way than the other. So a single cell, an extra rectifier cell, was the only way I could close this down a bit, and some smoothing. This we achieved with part of a fish plate from the railway line which was being used at the aerodrome to move the dirt from one place to another by man-power, about six men on these, and the odd fish plate used to disappear anyway for various reasons. I dropped one off at the power station and asked the Chinese under my breath if he could cut it into three little sections which he did, he didn't want to know why.

Then again using some palm oil and some bee wire which was in fairly plentiful supply, which we stole - it was a bit risky because the Japanese were cultivating a couple of beehives outside the wire and of course this wire used to disappear for various things unrelated to radio - and we put the palm oil along the wire stretched out and rubbed this palm oil on it, thickening it with a little bit of flour and then heating it; the flour bound the palm oil together and formed a fairly good insulation over the wire. Good, but lucky, and with a lot of travelling.

I should come back to the capacitors on that, because we had to insulate the layers of those which we did by putting a layer of newspaper (a few people had newspaper and various things, for other reasons than newspaper of course, but then we had no other toilet requisites in the party) and by soaking this in some coconut oil we could insulate each layer after we wound it, and with a piece of this bee wire - we had something like fifty feet of it - wound round this part of the fish plate, we made a fairly good choke coil. And then a bigger capacitor, which was no trouble, having had success with the small one, to just wrap as much tin foil as we could round another sheet of newspaper which finished up about 18 inches long by about three quarters of an inch in diameter. We didn't even try to measure the capacitance of it, because we couldn't do anything about it anyway, except put more wire on. And that in effect was a fairly good rectifier, a very dangerous one because we had the

110 all right but we had a bit over that by the time we had rectified it, and we don't know because we had no means of measuring it.

Finally, the valve; we joined the valve by winding the clean little bee wire around it and then plugging it with any insulating material we could get to make it stick, - no valve holder, of course. So eventually we produced a receiver of sorts, except it wouldn't oscillate. We tried building more, another choke coil, and this went on for ages; there was no possibility we could get this valve to oscillate. I think it's recommended according to a friend of mine who had an amateur licence, he thought that about 120 volts

was the best we could get and there was no way we could get that by trying to smooth this any more. So the only avenue open was to bribe one Chinese working at the power station who was very much our way, and of course in those days was a nationalist Chinese. The capital of China in those days was Chungking, and I told him we could get him some overseas news from Chungking if he would slowly wind his field coil power up on the generator every night starting at about 9 o'clock bit by bit, and get it up to about 130 on his meter. He understood, and after that I said half an hour to drop it again, very quietly and slowly because it may affect the lights "....and you no speak about that because you get chopped, you know, and we will give you Chungking news...." This was duly done and for about six months we had reliable communication. The first trial on air had too much hum, and we had to modify a few things two or three times in attempts to get it right, and in the end we had a workable situation which was worth exploring.
Capacitors right, choke coils right, one head phone, we had some old rag so we tied it round the head and tied it on, or string, or whatever we could get. With the hope of recording something we took some paper, which wasn't in plentiful supply, but the odd piece of paper we could get. Running notches down the left hand side, about a quarter to a half inch apart down the paper, and bending it over so that these little pieces stuck up in the air, and in the pitch darkness one could then put the headphones over one's head with eyes looking out for possible interruption by the Japanese - we had some lookouts, or cockatoos as the Australians called them, around the place to warn us at the oncoming of the Japanese - and with great trepidation we heard Big Ben chiming one night. Of course only one of us heard it but we were so full of enthusiasm. It was the BBC all right; it was quite a clear signal but it was somebody talking about growing hops in Kent. This broadcast went on for something like three quarters of an hour without any interruption, but ultimately the signal faded out and I was very annoyed. I was asked the next morning by my senior officer what was the news, and I said "we've got good news; I can't talk here, come this way." So he came along and said "what's this news you're talking about." I said I didn't actually hear any news, and he became very annoyed with me and said what the hell did I mean, and I said "if the British primary producing experts are capable and able to spare the time to talk about growing hops in Kent, Britain must still be alive and floating with their thumbs up, and as far as I'm concerned that's the best news I could hear!"
That's the outline and maybe there are some questions I haven't covered properly.
BJ: The first question I would like to ask you is: What did you have in the way of tools, if any, and how did you connect the components of the wireless without, presumably, a soldering iron?
RGW: No soldering iron, no solder of course, and no other system really available but to twist and wrap with some coconut oil paper, or cardboard or something, and very gently lift it. It was on a platen of wood we obtained somewhere; it was about a foot by a foot or something, so we just mounted the components on that. A meat skewer on the capacitor - oh, we had a capacitor too, a capacitor, a valve and a headphone, which were external to camp components we had. We didn't have any tools at all, except someone obtained the use of a sledge hammer - for what purpose I don't know because

one of those would not be needed to escape; other than cutting up the soft iron of the fish plate which was about the only reason we needed anything, the rest were just twisted wires. We just wanted to get one usable because we didn't know whether it might be blown up or captured; we weren't worried, the main thing was initially a short term aim (as well as a long term aim) that it might last. Fortunately, it lasted for over a year - sixteen months until the arrests took place, but that's another story.
BJ: Can I just ask you - the components for the low voltage battery cells that you produced, where did you get all the components from?
RGW: Well, zinc wasn't hard, there was some sheet zinc lying on the aerodrome and we pinched quite a bit of that because that would be eaten away during the use of the cells for the low voltage. I don't know what would have happened if that ran out. I think someone produced two lantern cells which did for a while, but it was mainly on this home-made cell system, which wasn't efficient but nowhere near as inefficient as the rectifier was. We must have been consuming... Ah Ping said he had to turn up a lot of power to keep the lights what they wanted. We were dispersing such an amount of power in this four test tube rectifier for the high tension.
A variable capacitor was another component we had to bring in. We couldn't make a variable capacitor, it was impossible. We had to take two plates off the one we had to get a high enough frequency. Yes, I can't remember why we didn't go up a bit in inductance; it was largely a trial and error business really. Except that in a regenerative receiver you had some idea when you were near a station because the receiver was so sensitive as all regenerative receivers are. It had a piece of meat skewer type wood which I had a hole drilled in by a pen-knife, and we glued this in with some of our glue or something, into the capacitor shaft so that we could tune it by holding a little stick across it, fixing it at about six inches because one couldn't get one's hands any closer to the set because it was in a state of very near oscillation where the maximum sensitivity is, just before it bursts into oscillation. With a fairly clear HF band, it wasn't long before we knew roughly, by putting a couple of marks on the stick, where it was. We knew that the Voice of America was due for a transmission and Idon't think we ever knew the frequencies because the BBC didn't announce frequencies, they just came on the air and broadcast.
BJ: What did you use for an aerial?
RGW: A clothes line. All the huts had a clothes line of some sort so we just took a thin wire from that and wrapped it round the edge, knowing that a normal sentry wouldn't take any notice of it, and we just dragged that across the side of the hut and brought it in, and the people with our permission would put their loin cloths out and hang them over this when they washed them so it looked as if it was being used. The toilet in the sleeping block was a hole in the ground and it was verboten to be used by anybody except to put our radio set in when it wasn't in use; everybody respected our wishes in that regard!
I think the best thrill was, well two or three thrills, which were momentous I suppose and of great excitement, almost excitement of crying with excitement, and the first was I think when we heard a full news bulletin of something like 400 aircraft over Dresden or somewhere, pounding the place to pieces; we were very pleased about all this. But from the land point of

view, from the beginning of '42 I think, I can't remember, but sometime just before the Battle of Alamein, and we heard some of the troop movements in preparation for that. The bulletins in those days were fairly long and gave a lot of detail.
Unfortunately the first lot of rectifiers blew up about 2 days after this so we were out of business for something like 5 or 6 weeks. Of course, the rumours started to flood in as to what was happening, what wasn't happening, the war would be over in 5 minutes and all these mainly optimistic things; but there were a few super-pessimists who said we would never get off the island, and would die there, and that sort of thing. But the thrill, I think, was when reception was restored again and we had to do another little bit of fine tuning because everything you changed seemed to affect something else; the whole thing was very sensitive and wouldn't have stood up to present day quality assurance bump tests!
So back there on the first night we missed the BBC for some reason, and the next thing was the Voice of America which had a headline which ran something like this: "The war is over in North Africa, Rommel is knocked to pieces, he's out of the Middle East and the Middle East is finished, the future for this and that ....." That was the end of the American news in about three sentences! No other detail, so I said we would go back at about 12.30, and hope that Ah Ping hadn't pulled the voltage down too far, to see what we could hear. Again, the BBC was a little low but it suddenly came quite bright and lifted in volume, and Big Ben chimed again and there was a voice in the wilderness calling. It was a lovely sensation to hear Big Ben playing in those days, and every time I hear it now I become excited. The announcement, initially in a most depressing vein, described all about the 8th Army's movements, and it was here that it did this, and this regiment drew up and did that, on and on this went for something like 15 to 20 minutes, and we tried not to follow it because we had our eyes on too many other things, look-outs and so on. But a lovely flow of English and if you had a tracing board you could have traced out exactly where everything was in situ, but of course that wasn't the aim of our exercise which was to get news. At the finish of the news the polite sentence said "It must be considered now that as all resistance in North Africa has been overcome the Allies victory must be "assured" or something like that. And that was all he said, but he took a few minutes to describe everything that happened, so you had a clear picture. But the Americans seemed to be creating for a public that just wanted the headlines, three headlines and that was all; no other interest in anything else. That was one of the happy moments of the system.
We had the problem, of course, of writing the news because naturally a lot of people wanted to know it and a lot of people could be told it without its origin. This is why we used the piece of paper we took with us (Gordon Waite and the other officer who used to share some of the work), and as soon as we heard about 30 bombers over Dresden or something, you just put 30 BD, or B for Berlin, and feel the paper down when you felt it coming to the end, and pick up the next little bit of bend and write along that in the pitch dark, hoping that you've got something in the morning. Surprising how legible it was, just triggered a couple of words like that. Unfortunately, I was in deep custodianship with the Kempitai when the Atom Bombs were dropped and I didn't hear that news on the BBC; it was relayed to me. We didn't keep these

things, of course.
Getting off the technical side now, the radio set didn't betray itself. Some criticism could be levelled at us I suppose. We trusted too many people; we had no intelligence training then, of course, or anything like that and we were inclined to trust every Asian we met who smiled at us and who said he was one of us. Anyway, while this was going on at the aerodrome and once the troops heard, we had to tell the troops the good news of course. We said we had heard from an unknown source that the war is getting better, or something like that - we had to give them a sanitised version. It was probably all they wanted but, naturally, two or three senior officers wanted to know as much as they could because they may be the ones who would have to take some decisions one day about it.
Unknown to us an Indian - I don't like saying this and I'm not being racist, it could have been any nationality - blackmailed a Chinese who was helping us on the aerodrome picking up bits of iron for us and various other things. He blackmailed him but the Chinese wouldn't talk, so the Kempitai arrested the Chinese and put him on a rack; he mentioned in the course of his cries for help - which was not a nice thing to think about but I don't blame him - he mentioned Captain Matthews and a couple of other people; I think I would have done the same thing at that stage.
The Japanese then decided to make a raid on the camp, which they did, and I was then charged and taken away by the Captain; he wanted the receiver and I gave it to him in the end after a lot of leading him round the camp with his soldiers. I could almost laugh at some of the things that happened. He must have told them he was looking for a radio set; a Jap soldier came running up to him with a piece of metal which looked like a piece of horse harness or something; the Captain almost kicked him and told him what to do. So in the end I decided that I couldn't talk to anybody before the rest of the troops on this parade ground, and I felt so conspicuous. He walked back and said "Are you going to tell me because we want the wireless set?", so I said "Yes, I've just thought where it might be". So I went across and told him where the hole was, and they dug the hole up and, of course, there was the transmitter. He said "Ah, you've been sensible at last", so he took the transmitter and they took it away.
>From that day on, I was worried about this because I knew the receiver was OK and the troops would be happy about that; they would still be able to get news. And then he took me up to the platform where he stood and addressed everyone. All he said in English was "You all look at this man, you will never see him again" and led me off. I had a sort of a dying wish, going in on the vehicle to Sandakan to be interrogated, that somehow or other this set could be preserved and, of course unknown to me, it was. They continued using it but not until after about a week or so - their nerves were a bit shaken. But they used it for some months afterwards until the big moves came and it was a successful source of morale lifter.
During the trial, that was when the shock came to me when this transmitter was brought out by the prosecution as evidence that we had been using a receiver, but the Court accepted it. It was never mentioned after that because had it been, I don't think either of us would have been alive, because we had planned to get some crystals from the Philippines and try and fit them in this set then we could call them on CW and give them some news

about ourselves. But we did get some news by other means, via an agent taking a sandalwood vessel across, that the British and Australian authorities knew where we were, and it was proved at the end of the war that they knew exactly where to come for us. They had guerilla parties in behind the lines, but they couldn't contact us and they had to watch some of our people just die virtually, because they were there and there would have been trouble otherwise.
BJ: Could I just take you back and ask you to fill in a few details about the transmitter. You talked a lot about the construction of the receiver and I would be very interested to know where the transmitter fitted in to this; were you developing that alongside?"
RGW: "No, the receiver first; we had that, and then we started the transmitter as a rather low priority of course, but one it would be nice to have. I had finished the two 6L6G's to make a push-pull amplifier that was the RF output to be, and the oscillator, and we had the capacitor but were missing a few more components andthat was about where we were. In other words, in the course of events, had he been an expert with some sort of knowledge of electrical engineering, we would never have got away with two 6L6's sitting up on a block of wood with a few capacitors and things hanging on them, but obviously the Court Martial officers were normal, without disrespect to Infantry Officers, and they had no knowledge of telecommunications.
BJ: Again, the valves you used in the receiver were...?
RGW: Only one, that's all we had, which was brought in by Mr Mabey. He smuggled in a pipe to me, a smoking pipe, with some tobacco. Lovely gentleman. Unfortunately, I never had long with him, he died soon after being arrested. His widow lived at Hove with her sister; the two are deceased now.
End of recording.

I posted that on rec.radio.amateur.homebrew newsgroup a year ago thinking it ought to really spur some interest in bare essentials homebrewing---nobody thought anything of it. It was originally posted at: http://chide.bournemouth.ac.uk/people/r.g.wells.html and was a link from: http://chide.bournemouth.ac.uk/ but they have taken it down.

I am looking for another web site that had the schematic and working model of the canteen radio that was built in a Japanese POW camp in the Philippines. I didn't bookmark it and after doing a search to relocate it I get the feeling that the web site has been removed.

I really would like to learn about the other camp radios and spy sets that were built and used but information seems to be non-existent. I saw some of the radios at the Dayton Air Force Museum back in the late 70's and I am sure more information is available but it is probably tucked away.

There is a military museum, not especially big, in Bayeux, Normandy, with one or two POW camp radios. Nothing in the museum impressed me more than these sets. Also, there was one or two in the military museum in Paris. The descriptions in the museums may have been in French and I didn't understand completely. I remember that one radio had been built mostly of salvaged portions of an aircraft radio.

Well, I don't to inculcate any envy, but tomorrow afternoon I'll be taking the two hour drive to San Luis Obispo for the annual MRCG meet, 5/5 and 5/6. (Military Radio Collectors Group)

Last year one of the members brought (from the Perham? Museum in the Bay Area) some truly fabulous and mint WWII Japanese trench radios.

If you are in the neighborhood, stop at Camp San Luis Obispo.

Yep, you heard Jim correctly. Most US military HF gear is USB, such as
the GRC-106, PRC-74 and PRC-47. Most of it also does not go very
high, such as the PRC-47 above that stops at 12 Mhz, so a 40 Meter USB
net was in order.

Subject: WTB FTdx560 VFO and CW filter

Just got a Yaesu FTdx560 (thanks to those who helped me out with advice!!) and will be putting it on SSB and CW as soon as I get my upgrade (yup, at least ONE "new" ham who will use CW!!). I'd really like a CW filter and a VFO for the 560. Also, if you have any accessories for the rig, please let me know condix. and price (& shipping, if possible, to NC). I'll be at the June 10 Winston Hamfest if you're local.

73 de Andy KG4GSC

(For those who helped me...unit was "fair" on reception, some intermittants. Tore into the unit last night. Most of the unit was great...except for some "repairs." More cold solder joints and over-flexed leads than a first year community college electronics class!! Heated up the iron, replaced half a dozen caps and resoldered 30 or so connections....and it came right up!! Listened to 80m & 40m for a while (love those guys on 3952!!) and will try 10/15/20m's this weekend. Next trick is to borrow a friend's dummy load and test the transmitter. "Tune for minimum smoke," right?? <>)

If all else fails, use the large red and black plug-in/screw-on
terminals like on DC power supplys. Mount on small piece of
plexiglas.

Hello Lou,

I have the following Millen HV connectors. Postage is on you, prices are asking
prices:

p/n 37001 NOS in original box - black. Have two (two pairs, each in original
box) $5 per pair

p/n 37001 used, VGC - black. Have one pair. $4 per pair

p/n 37002? used, VGC - red. Have one pair. $4 per pair

Also have two used male connectors, GC. One black and one dark red. $1 each

Have lots of other parts, too.

73 de Jim, N2EY

Actually the FT-101 series, had 11 meters on the bandswitch from the
factory up until the FT-101F. From that point the 11 meter crystal was
removed and the switch was changed to read "aux".

The 101 E should still have the 11 meter position on the dial. When I
had one, it did.

Subject: 6LQ6 Tubes Wanted

My Swan 260 also uses a 6LQ6/ 6JE6, which melted down. The problem is spending
$60 or so to fix up an old mediocre rig. Barry, is your definition of "living on edge"
refer to a not so
robust output stage? The worst part is that I had tons of these horizontal output tubes in
my old
tv repair days.
Al, N2NKB

From: yardleyite@aol.com (Yardleyite)
Subject: Clegg Venus 6M SSB Station For Sale:

I have a complete Clegg Venus 6M SSB station including the SS-Booster speech
processor, and power supply/speaker combo, and the original Clegg torquoise
hand microphone. Everything is in excellent condition, the radio puts out
around 50 watts from a single 12V version of a 6146B (just replaced).
The original Eddystone dial works great and the receive sensitivity is fine.
This radio uses Nuivistors in it's front end. AM and CW operation are also
good.
The paint is a little faded on top of the radio and power supply. Otherwise
everything is excellent. I have a copy of the manual for the radio and the
SS-Booster. I have all of the interconnecting cables as well.

I'd prefer not to list this on ebay. The last one I saw there fetched over
$500.00 for the radio alone without a power supply or the SS-Booster speech
processor or mike. I'm asking $600.00 plus shipping for the whole station.

If you want to catch some of the terrific E-skip this season on SSB/CW or want to work AM on 50.400 with broadcast quality audio - here's a chance to do it with something other than a Yaecomwoods out of the box radio. It's probably one of the rarest Clegg's made that you can still operate every day.

I recently upgraded my license and prefer to concentrate my operate time on the lower bands.

Thanks for reading this message and 73.
Joe

From: nh6vrdale@aol.com (NH6VRDALE)
Subject: CLEGG Zuess POWER SUPPLY/MODULATOR

This is rare ! I have the Modulator/Power Supply for use with the Clegg Zuess 2 & 6 meter Xmtr. This unit has been in dry clean storage for 10 yrs. It worked when last used. Took RF unit to Dayton and forgot the Power Supply. Sold RF unit without Pwr Supply.
This unit is HEAVY and is located in Akron Ohio . Pick-up would be nice but I can ship via Bus or other way. You pay shipping ...
FIRST $150 gets it ...

Subject: Have you signed it yet?

I don't think that I will be signing the Drake petition.

Please consider Drake's latest attempt at marketing a Ham Radio: the $600 2-Meter rig. Wonder how much Drake lost on that one. With this track record, I would imagine that an HF rig would retail for about three to four thousand dollars. The Drake-lovers would sure have to dig-deep for that one!

How can an American manufacturer compete with Icom et al? Consider the 706MKII with DSP being closed out now for 800-900 dollars.

I think that Drake is smart enough that the hams could never support their

operation. The SWL's seemed to have
propped up the Company for awhile.
I'm not sure if that is still happening.

Look at Drake's latest SWL offering:
the "repackaged" SW-8 sold by Grundig.
Imagine how betrayed the folks that
shelled out 800 smackers for the SW-8
feel now that Grundig is selling the
same radio for 2-3 hundred dollars less!

I think that before Drake re-enters
the ham arena.....they need to go
back to Marketing-101.

> retail for about three to four thousand

Well...have you priced FT-1000D's or
IC-781's recently? (not to mention
Signal One Mil/Spec 1030c's) ;-).
My contention is that a properly marketed
xcvr version of the R-8A (TR-8A?) that
hit a price point close to that of the Omni VI+
and incorporated the same type of feature set:
DSP, multiple IF filter selection, full RS-232
control, full QSK, separate RX ant switching, etc.
could have the potential to be a bigger 'hit' for
them than many might imagine.
I love my TR-7A (and my 'B-line' and my
TR-4Cw/rit etc.) but folks who are serious
about contesting these days are not willing to
forgo computerized rig control.
That being said, the sheer volume of things
showing up on eBay being auctioned off to
'benefit' the Drake ARC (coupled with the
decision to stop servicing the -7 line gear a
while back) does not do a lot to engender
'warm and fuzzy' feelings about R.L. Drake Co.'s
future corporate direction re: the Amateur
Radio Service.

Date: Wed, 10 May 2000 01:16:09 GMT
From: JGinNY
Subject: Pls explain -- eliminating hum in speech amp?

An old ARRL Hints & Kinks book includes a tip on getting rid of
speech-amp hum.

Basically, it involves putting a 10 to 12 volt + bias on the filament
circuit. The bias voltage is obtained by connecting 2 series resistors
(as a voltage divider) between the plate supply and ground. This low +
bias is tapped off the voltage divider at the juction of the 2
resistors, and then goes to the filament supply for the speech amp.

The article advises that this will do away with the hum, *but that the
filament(s) must not be grounded on one side. (Neither should the
center tap of the filament winding be grounded.)

Question is:
If this +10-12 volt bias is placed on the filament supply, how does that
reduce or eliminate hum in a speech amp?
The wave shape of the AC component on the filament remains the same,
does it not? It's just being bumped up by +10 volts throughout its
cycle. How would that alone be effective in getting rid of hum?

And -- isn't one side of a rig's filament supply grounded, typically?
How, then, could one successfully apply the aforementioned scheme?

Finally, one other point: The article recommends using a "filament
bias" value of +10-12 volts, as mentioned above. However, it doesn't
specify whether this is intended for 6.3 or 12 volt filaments. Would it
matter? Would the same value of bias work for either?

many thanks,
N1AEP

Date: Tue, 9 May 2000 22:02:16 -0700
From: "Bob"
Subject: Pls explain -- eliminating hum in speech amp?

The rationale for that hint is that some tubes have heater-to-cathode
leakage that causes hum in the amplifier. Raising the heater potential
reverse biases the parasitic diode that the heater and cathode create, and
prevents current.

The whole thing is rather worthless actually. If you have hum from that
cause, you need to replace the tubes with good ones that don't have
heater-cathode leakage.

The amount of potential required is such that, even on the peaks of the
heater supply, the diode never gets forward biased. So the value given
applies to 6.3 Volt systems.

In general, if you have hum, the way to eliminate it is first to find the
cause, then take measures to eliminate it. The scheme above only works if
that's the source of the hum.

Subject: What If .. No xsistors

Sitting around last night, an odd thought popped in my head (fairly
normal occurence)-
Where would we be if transistors had never been invented (and therefore
none of their progeny (ic, etc.) had ever been developed).

Imagine here we are, in May, 2000 with 40 more years of vacuum tube
development under our belts. Would radios be significantly different
than they were in 1960? Had tubes hit a plateau in development by that
time? Was there anywhere else to go? Seems like we were seeing
multiple uses stuffed in one glass envelope, would that have continued
and grown, until we had something akin to large scale integration with
vacuum tube devices?

Any ideas?

The transistor and later the IC were enabling technologies. The transistor lead to development of the IC which lead to development of the computer which enabled development of things like cellular phones that use spread spectrum modulation. take away the transistor, and you have to take away ICs, computers, software, etc.

Maybe if transistors hadn't been made workable, tubes would have developed into something like ICs - it is obvious that miniaturization was taking place even in tube based equipment. Maybe tubes would have been built in arrays of almost microscopic units similar to field emissive displays.

A classic Heath beginner's station. These pieces have been thoroughly cleaned up, repaired as necessary, weak tubes have been replaced, then aligned and tested. The complete station picture is at:

http://www.accessone.com/~stockb/radios/HRDXsta2.jpg

HR-10 RECEIVER -- This is an AM/CW/SSB ham-bands only receiver (no WARC), with a crystal lattice filter in the IF. It has good sensitivity on all bands. Minor scratches on front panel, plus the usual scuffs scratches on the outer case (an overspray would make it an excellent looking case). The insides are in very good condition, see:

http://www.accessone.com/~stockb/radios/HR10inside2.jpg

DX-60 TRANSMITTER -- The original (and best styled) DX-60. Good power out on all bands. CW plus controlled-carrier AM. Front panel is excellent, case is in same condition as the HR-10's. Inside cosmetics are not bad, but there is tarnish on the chassis, and some rust underchassis. See:

http://www.accessone.com/~stockb/radios/DX60inside.jpg

Available as a package for $160 (check or MO only) plus shipping from Seattle (98144).

Right you are. And this, of course, means CDs (both audio andcomputer) as
well as devices such as digital signal processors which depend upon LSI
and ICs. Hence, whatever else might have happened, LPs might still be
extant (some of us believe they have better bass response than CDs
anyway) and, most certainly, cassettes (and, perhaps still, reel-to-reel
tapes) would be prominent. I'm not sure audio quality would have suffered
much from what it is today -- it might be better -- but certainly we
wouldn't have PCs and the Internet. Whether this would have been good or
bad I leave to others.
>

Now *that* would be interesting. But they would still have been analog
devices. Wonder what sort of logic and processing systems would have
resulted from the ability to have a kazillion analog devices in a tube
socket?

Incidentally, what are "field emissive displays"? My ignorance is
showing.

And while I don't wish this thread to die (I'm a sucker for
"alt.history.what-if"), this thread makes me wonder what the smallest tube
ever made was and what the smallest tube in everyday use ewas? Nuvistors
were pretty small but boy did they run hot!

I'm still using a stereo with a Macintosh amp from 1968 with tube finals
and a nuvistor in the FM receiver. Seems kinda weird to plug a CD changer
into it but that's what I've done.

I have 7 sections of Rohn 25 G Tower for sale (approx 66 ft) in excellent condition, on the ground. This includes the "pointed top section, which has no bushing so it can take up to a 2 inch mast. Also included is the rotor plate, and a nice side arm for mounting an additional antenna onto the side of the tower. No bolts or other hardware included. All or none, I can't part or section it out so it's all gotta go at once. First $250 or best offer gets it. I am in Del Rio, Texas, 150 miles west of San Antonio, 150 miles south of San Angelo, this is the pick up price, I can deliver in the area (outside Del Rio) for a nominal fee.

I bought my FT101-EE (FT101-E without the speech processor)
new-in-the-box in 1975; it already had 11M on the bandswitch
and a crystal in the socket...and sure, I cut the brown wire
to enable 11M transmit. Sold it to a CBer in 1984.

IIRC, when 11M belonged to the hams, you could operate that band
full duplex on 'phone. I made a couple of contacts before it
went CB. 11 was never very popular before SSB and low level mix-
ers as it wasn't harmonically related to any of the other ham
bands and required a special VFO band operating somewhere around
the high end of 6 MHz (or Mc in those days).

I also owned a Yaesu FTDX-100, the forerunner of the FT101 series.
With all circuitry on one board, it was a nightmare to work on and
was never imported into the USA due to alleged patent infringement
and circuit similarities to the SBE SB34.

Duncan,
Out of curiosity are the tubes you're replacing going into an old Yaesu? Are they NEC's? If so, you'll have to use NEC's or you may have touble neutralizing them.
According the source I checked the only substitute is a 6KD6 tube. If you want check out this website:
http://hereford.ampr.org/cgi-bin/tube?index=1

It will give you the tube base and characteristics of just about any tube you can think of.
If you don't have a Yaesu product you're looking to replace the tubes in I'm sure there's something else you can use.
Good luck and 73.

Hmmm ... you'd want a Beta-emitter to simulate a cathode, not an alpha-emitter. Hence, I believe that you couldn't use U-238 (isn't U-238 an Alpha-emitter?). Also, due to the nature of radioactivity, the rate of emission would decrease markedly over time. Close but no cigar!

I've often wondered about that. Don't most beta sources emit electrons
at substantially higher energies (MeV equivalent) than a typical tube
cathode? It might be difficult or impossible to control the flow of
current in a radioactive-cathode tube with a conventional grid
structure.

Anyone know for sure? I'm clearly rusty on the fundamentals... what
exactly _is_ the difference between beta radiation and cathode rays?

Directly heated filaments work better if impregnated with Thorium. Thoriated tungsten filaments are still found in some old types of power tubes..

lack of solid state (use that term, not transistor) would have
led to vacuum integrated circuits - in fact such things a FEDs
are being developed now, so there may actually be a return to
electron transport devices - in particular, in a radiation
environment, a non-solid state device has some advantages
(like much greater total dose and upset immunity). further,
with electron micrography you can create small cathode
structures that dont require heating - the field intensity is
sufficient to drag electrons off the surface directly -
spectrum and other mags have had articles on this - FEDs were
discussed in spectrum within the last year or so.
Also, imagine the IC without solid state - think of a super
compactron.

1967. Pls explain -- eliminating hum in speech amp?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-10 00:00:00 UTC
From: JGinNY <jwg6@cornell.edu>
Message-ID: <3918B94F.A9DE02AA@cornell.edu>
Source record: 66935
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew

An old ARRL Hints & Kinks book includes a tip on getting rid of speech-amp hum.

Basically, it involves putting a 10 to 12 volt + bias on the filament circuit. The bias voltage is obtained by connecting 2 series resistors (as a voltage divider) between the plate supply and ground. This low + bias is tapped off the voltage divider at the juction of the 2 resistors, and then goes to the filament supply for the speech amp.

The article advises that this will do away with the hum, *but that the filament(s) must not be grounded on one side. (Neither should the center tap of the filament winding be grounded.)

Question is:
If this +10-12 volt bias is placed on the filament supply, how does that reduce or eliminate hum in a speech amp?
The wave shape of the AC component on the filament remains the same, does it not? It's just being bumped up by +10 volts throughout its cycle. How would that alone be effective in getting rid of hum?

And -- isn't one side of a rig's filament supply grounded, typically? How, then, could one successfully apply the aforementioned scheme?

Finally, one other point: The article recommends using a "filament bias" value of +10-12 volts, as mentioned above. However, it doesn't specify whether this is intended for 6.3 or 12 volt filaments. Would it matter? Would the same value of bias work for either?

many thanks,
N1AEP

1969. Clegg Venus 6M SSB Station For Sale:

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-10 00:00:00 UTC
From: yardleyite@aol.com
Message-ID: <20000509225011.10724.00002056@ng-fy1.aol.com>
Source record: 66937

I have a complete Clegg Venus 6M SSB station including the SS-Booster speech processor, and power supply/speaker combo, and the original Clegg torquoise hand microphone. Everything is in excellent condition, the radio puts out around 50 watts from a single 12V version of a 6146B (just replaced).
The original Eddystone dial works great and the receive sensitivity is fine. This radio uses Nuivistors in it's front end. AM and CW operation are also good.
The paint is a little faded on top of the radio and power supply. Otherwise everything is excellent. I have a copy of the manual for the radio and the SS-Booster. I have all of the interconnecting cables as well.

I'd prefer not to list this on ebay. The last one I saw there fetched over $500.00 for the radio alone without a power supply or the SS-Booster speech processor or mike. I'm asking $600.00 plus shipping for the whole station.

If you want to catch some of the terrific E-skip this season on SSB/CW or want to work AM on 50.400 with broadcast quality audio - here's a chance to do it with something other than a Yaecomwoods out of the box radio. It's probably one of the rarest Clegg's made that you can still operate every day.

I recently upgraded my license and prefer to concentrate my operate time on the lower bands.

Thanks for reading this message and 73.
Joe

1976. Re: 6JS6A = 6JE6C/6LQ6?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-11 00:00:00 UTC
From: Lionel Sharp <vk4ns599@ozemail.com.au>
Message-ID: <391A2B8D.A42E937A@ozemail.com.au>
Source record: 66744

G'day Duncan,

According to the information that I have I would say no.

The 6JE6C/6LQ6 has a Button 9 pin, E9-99 or E9-76 Base
whereas
The 6JS6A has a Button 12 pin, E12-74 Base
Whilst the tubes appear to be electrically and physically similar the inter electrode capacitance are quite different. (you could have neutralizing problems)

In the Tube Substitution Handbook, Number 21, by Howaard Sams & Co. they do list the 6KD6 as a replacement for the 6JS6 but I don't think that they considered the different inter electrode capacitance's of the 2 tubes. (you could have neutralizing problems)

Regards
Lineal L Sharp, VK4NS

>computers, software, etc.

Not really. The first generations of computers used tubes. ENIAC, the first
full scale general purpose digital electronic computer, used 18,000 of them. By
the mid '50s, the giant SAGE system used 44,000 tubes.

Spread spectrum was invented in the '40s. One of the the coinventors was Hedy
Lamarr (yes, THAT Hedy Lamarr).

One of the best kept secrets of WW2 was the proximity fuse. This was a small
radar set that was installed in the nose of all types of artillery shells, and
would detonate the shell when it neared an aircraft or other large, conductive
target. Each fuse used four subminiature tubes, and had to withstand severe
conditions (months of storage, use in all climates, 20,000 G shock, no
adjustments, and near-zero chance of false detonation). All of these problems
were solved, and the fuses were produced by the millions.
>
>Maybe if transistors hadn't been made workable, tubes would have developed
>into something like ICs - it is obvious that miniaturization was taking place
>even in tube based equipment. Maybe tubes would have been built in arrays of

Perhaps.

Here's another thought:

Could the transistor have been developed without the tube coming first?

Hi,

Jim asked: Could the transistor have been developed without the
tube coming first?

I think so, as an off growth of Crystal Sets on the receiver
side, however on the Transmitter side without Tubes, it would
have stopped with a form of spark gap for transmitting.

I think it would have taken much longer to get where we are
or even were we with the radio science in say WW2.

What do you all think?

Subject: 6JS6A = 6JE6C/6LQ6?

Duncan,
Out of curiosity are the tubes you're replacing going into an old
Yaesu? Are they NEC's? If so, you'll have to use NEC's or you may have touble
neutralizing them.
According the source I checked the only substitute is a 6KD6 tube. If you want
check out this website:
http://hereford.ampr.org/cgi-bin/tube?index=1

It will give you the tube base and characteristics of just about any tube you
can think of.
If you don't have a Yaesu product you're looking to replace the tubes in I'm
sure there's something else you can use.
Good luck and 73.

Subject: FS:Collins 208U-3 2-30Mhz 3 KW RF Amplifiers

I have several Collins 208U-3 3 KW 2-30Mhz RF Amplifiers. These are in good
condition as removed from military service.

This is a military/commercial quality amplifier that uses a single 4CX3000A to
produce 3 KW PEP or average power with only 0.2 watts of input.

These are automatically tuned with a servo system that takes about 10 seconds to
tune-up.

The primary power input is 200-250VAC, 3Ph, 47-60Hz.

The net weight is 975Lbs, size: 32" x 23" x 70" Tall.

If you have 3Ph power and the room one of these superb Amplifiers would

make a great addition to your station.

I am offering these unpacked FOB Somis, CA as follows:

untested less the 4CX3000A Tube $3,000. unpacked.

I have a few NEW Guaranteed 4CX3000A tubes at $1,000. each

Crating by a professional packer is $350.00 additional.

A complete service manual is included at no charge.

There is a photo of this item on our web site

In rec.radio.amateur.boatanchors rooster <rooster@bedford.net> wrote:
> 11 meters was installed as an option, but the transmit was disabled. there
> was a wire that had to be removed to recover transmit ability.

I bought my FT101-EE (FT101-E without the speech processor)
new-in-the-box in 1975; it already had 11M on the bandswitch
and a crystal in the socket...and sure, I cut the brown wire
to enable 11M transmit. Sold it to a CBer in 1984.

IIRC, when 11M belonged to the hams, you could operate that band
full duplex on 'phone. I made a couple of contacts before it
went CB. 11 was never very popular before SSB and low level mix-
ers as it wasn't harmonically related to any of the other ham
bands and required a special VFO band operating somewhere around
the high end of 6 MHz (or Mc in those days).

I also owned a Yaesu FTDX-100, the forerunner of the FT101 series.
With all circuitry on one board, it was a nightmare to work on and
was never imported into the USA due to alleged patent infringement
and circuit similarities to the SBE SB34.

Subject: Goodby Xsistors !!!

Have a good response for you... basically Nuvistor development would have continued. During the 60's, there was all sorts of interesting research going on in making smaller and smaller tubes. Those of us around know that many companies made small battery powered AM and FM tube radio sets.

The end of tubes was caused by (1) the fact that transistors could be produced cheaper and faster and (2) they would withstand greater shock than glass or metal tubes.

And so tube development and research stopped and the solid state era began...

Well I am more than happy to tell you it is now... - ENDING - ....

NO that 12AX7 and 6L6 is not coming back into your stereo!!! But very promising research is being done on Nanotube technology. Basically packaged as a solid state device but with this technology you can "potentially" reduce power and increase active device count.

Nanotubes currently act as mini-triodes (some researchers already claim pentode actions) and you can fit hundreds of them in the space of a single P/N junction!!! Building them with current sub-micron technology is pretty simple. Many of the big electronics companies are involved so much of this is HUSH HUSH as the patents go flying out the door to DC but as with anything cool - many scientists have web sites up and running...

Suggest you do a search on "Nanotubes". There are thousands of sites now up.

What was once old is new again.... Who wudva thunk it??? !!!!

Subject: Heath Station: HR10 Rec. and DX60 Xmtr.

A classic Heath beginner's station. These pieces have been thoroughly cleaned up, repaired as necessary, weak tubes have been replaced, then aligned and tested. The complete station picture is at:

http://www.accessone.com/~stockb/radios/HRDXsta2.jpg

HR-10 RECEIVER -- This is an AM/CW/SSB ham-bands only receiver (no WARC), with a crystal lattice filter in the IF. It has good sensitivity on all bands. Minor scratches on front panel, plus the usual scuffs scratches on the outer case (an overspray would make it an excellent looking case). The insides are in very good condition, see:

http://www.accessone.com/~stockb/radios/HR10inside2.jpg

DX-60 TRANSMITTER -- The original (and best styled) DX-60. Good power out on all bands. CW plus controlled-carrier AM. Front panel is excellent, case is in same condition as the HR-10's. Inside cosmetics are not bad, but there is tarnish on the chassis, and some rust underchassis. See:

http://www.accessone.com/~stockb/radios/DX60inside.jpg

Available as a package for $160 (check or MO only) plus shipping from Seattle (98144).

Right you are. And this, of course, means CDs (both audio andcomputer) as
well as devices such as digital signal processors which depend upon LSI
and ICs. Hence, whatever else might have happened, LPs might still be
extant (some of us believe they have better bass response than CDs
anyway) and, most certainly, cassettes (and, perhaps still, reel-to-reel
tapes) would be prominent. I'm not sure audio quality would have suffered
much from what it is today -- it might be better -- but certainly we
wouldn't have PCs and the Internet. Whether this would have been good or
bad I leave to others.

Now *that* would be interesting. But they would still have been analog
devices. Wonder what sort of logic and processing systems would have

resulted from the ability to have a kazillion analog devices in a tube socket?

Incidentally, what are "field emissive displays"? My ignorance is showing.

And while I don't wish this thread to die (I'm a sucker for "alt.history.what-if"), this thread makes me wonder what the smallest tube ever made was and what the smallest tube in everyday use ewas? Nuvistors were pretty small but boy did they run hot!

I'm still using a stereo with a Macintosh amp from 1968 with tube finals and a nuvistor in the FM receiver. Seems kinda weird to plug a CD changer into it but that's what I've done.

The transistor and later the IC were enabling technologies. The transistor lead to development of the IC which lead to development of the computer which enabled development of things like cellular phones that use spread spectrum modulation. take away the transistor, and you have to take away ICs, computers, software, etc.

Maybe if transistors hadn't been made workable, tubes would have developed into something like ICs - it is obvious that miniaturization was taking place even in tube based equipment. Maybe tubes would have been built in arrays of almost microscopic units similar to field emissive displays.

Hmmm ... you'd want a Beta-emitter to simulate a cathode, not an
alpha-emitter. Hence, I believe that you couldn't use U-238 (isn't U-238
an Alpha-emitter?). Also, due to the nature of radioactivity, the rate of
emission would decrease markedly over time. Close but no cigar!

I've often wondered about that. Don't most beta sources emit electrons
at substantially higher energies (MeV equivalent) than a typical tube
cathode? It might be difficult or impossible to control the flow of
current in a radioactive-cathode tube with a conventional grid
structure.

Anyone know for sure? I'm clearly rusty on the fundamentals... what
exactly _is_ the difference between beta radiation and cathode rays?

Subject: What If .. No xsistors

Directly heated filaments work better if impregnated with Thorium. Thoriated
tungsten filaments are still found in some old types of power tubes..

Subject: What If .. No xsistors

lack of solid state (use that term, not transistor) would have
led to vacuum integrated circuits - in fact such things a FEDs
are being developed now, so there may actually be a return to
electron transport devices - in particular, in a radiation
environment, a non-solid state device has some advantages
(like much greater total dose and upset immunity). further,
with electron micrography you can create small cathode
structures that dont require heating - the field intensity is
sufficient to drag electrons off the surface directly -
spectrum and other mags have had articles on this - FEDs were
discussed in spectrum within the last year or so.
Also, imagine the IC without solid state - think of a super
compactron.

Subject: Wilcox 96D Transmitter for sale

I have a Wilcox 96D transmitter for sale. 1953 built. This is the one
with the works in a drawer slide out cabinet. Tall and narrow.
Has two 250THs in it now but two 450THs can be used. Excellent design
with large Jennings Vac variable. No power supply.
It is in very nice condition. I have JPGs on request.
$600 pick up or you crate from FtLauderdale Florida.

From: yardleyite@aol.com (Yardleyite)
Subject: Clegg Venus 6M SSB/SS-Booster/Power Supply/Speaker Station

I have a complete Clegg Venus 6M SSB station including the SS-Booster speech
processor, and power supply/speaker combo, and the original Clegg torquoise
hand microphone. Everything is in excellent condition, the radio puts out
around 50 watts from a single 12V version of a 6146B (just replaced).
The original Eddystone dial works great and the receive sensitivity is fine.
This radio uses Nuivistors in it's front end. AM and CW operation are also
good.
The paint is a little faded on top of the radio and power supply. Otherwise
everything is excellent. I have a copy of the manual for the radio and the
SS-Booster. I have all of the interconnecting cables as well.

I'd prefer not to list this on ebay. The last one I saw there fetched over
$500.00 for the radio alone without a power supply or the SS-Booster speech
processor or mike. I'm asking $600.00 plus shipping for the whole station.

If you want to catch some of the terrific E-skip this season on SSB/CW or want
to work AM on 50.400 with broadcast quality audio - here's a chance to do it
with something other than a Yaecomwoods out of the box radio. It's probably one
of the rarest Clegg's made that you can still operate every day.

I recently upgraded my license and prefer to concentrate my operate time on the
lower bands.

Thanks for reading this message and 73.
Joe

Subject: Wanted HRO-7 Power Supply, coils

Hello Boatanchor fans,

Looking for a power supply for my HRO-7, which is the National model 697. Now running on a homebrew which works very well but the correct supply would be nice.

I've come a long way with this set since it emerged from eBay, but could use some service literature on the crystal filter though as the factory manual is not real specific about some of the trimmers.

Also looking for the C, E and F coil sets for the same radio. Drop me a note, thanks, and let's talk.....would enjoy hearing from you National fans out there. Respond to or , either one
will work.

thanks,

nvv

Friend of mine was in the AF and one of his better assignments was to examine some of the avionics that were removed from a Mig-25 that was-ahem-misappropriated by a Soviet pilot and flown to Japan. Big international incident. Also revealed that the Soviets were using a lot of steel structural elements rather than titanium, range of this bird at best cruise was only about 800 miles. A good chunk of the avionics suite was vacuum tube stuff, used a lot of power but largely immune to the big EMP that nukewar could bring.
I've also seen the recreated chunk of the Berry-Atanasoff computer in the Iowa Historical Society building in Des Moines-it is about the size of a desk. Lots of triodes. let it be a lesson to folks who have developed something unique to take the time and patent their ideas.
Cheers
Robert

1993. HW-29; need some help

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-11 00:00:00 UTC
From: "M.L. McCauley" <mtech@airmail.net>
Message-ID: <D866644957C40AC9.C1EE8C3603CCFCC2.EC38B9E2E3633605@lp.airnews.net>
Source record: 66761

I picked up an old Heath 6M lunchbox, as much for the fun of reworking an old tube set and getting it on the air as getting on six. I have a few questions about the set that I am sure some of the old hands could answer:

1) The set has a mod in it that appears to be either a Heath option/retrofit or a very clean 3rd party add-on. It is a small bracket with a crystal socket, a 6AK5, a slug adjustable adjustable LC, and a few other parts. A wire from the mod plugs into one side of the original crystal socket through a small silver mica C. The manual that came with the radio is for a HW-29A, and the front panel on this set states that it is a HW-29, so it's not much help..

From the looks of it, I expect that it is an oscillator that runs at the xtal fundamental, thus allowing the original oscillator / tripler to work as a tripler only. Any guesses? Any idea where I could get a schematic and setup info? A non-A HW-29 manual?

2) The radio came with a crystal for 53.72. I can use that rock for testing, but I assume that the best freq to put the radio on is 50.40, yes?

3) Do most AMers use horizontal or vertical polarization?

Thanks in advance!

73,

Mike, WB5MYY

--> Transistors are analog devices, too. It's all in how they're used.
There's no reason you couldn't do digital switching with a tube; you can do
it with any device that can be transitioned quickly from hard conducting to
hard cutoff.

Also take a look at http://www.computer50.org

They have built a replica of the "Small Scale Experimental Machine" which was
the prototype of the Manchester Mk1 computer. The SSEM ran its first stored
program on 21st June 1948, You can download an emulator and try programming
it yourself... 32-bit registers BTW ;-) We are now coming up to the 50th
anniversary of the first computer sold to a private customer (sold in 1951).
I think by now we would have had fairly complex computers, even without
transistors, but they would have filled whole buildings!

Doesn't the emission of the thoriated tungsten filament decrease
markedly over time too? How long? Do Beta particles go through glass?
If so, you could have replaceable radio filaments, just a little 'dent'
in the glass where you clamp a piece of uranium or whatever...then the
tubes would last forever, barring physical damage...

Seems to me years ago I read a Science Fiction story that postulated the development of chemical engineering to a high degree, while electricity had yet to be discovered. They were at the point where they were launching manned rockets, but having a few problems with guidance, etc. Someone was trying to convince them to look again at an experiment they all did in college, where two dissimilar metals were immersed in a mild acid, and when touched together, bubbles formed. "Why does there have to be contact?" But the powers that be were too involved in the direction they were going to listen.

Er, it's not terrribly practical. I suspect all the radium in the world
dosnt put out more than a few milliamps at best.

One curie is
a whopping amount of radiation,
37 billion electrons per second, but that's less than a
micro-micro-micro-amp.

Although the thorium is a radioactive element, it is used for its thermionic emissions properties (much better than pure tungsten), not for its radioactive properties.

BTW, thorium also makes the tungsten wire more ductile, and thus easier to draw and bend, which is why GE was using toriated tungsten to make lightbulbs at the time the guys in the tube works ran out of tungsten wire for filaments and went over to borrow some tungsten wire, only to discover a much better material for filaments (vis '01 vs. '01A triodes).

Donald Borowski
Agilent Technologies, Spokane PGU

Howdy Al.....you might want to clarify whether the rigs you have for sale are HW101 transceivers or Apache transmitters (might stand corrected on the latter)....only thing I'm reasonably sure of is that they're not the same thing.

>Man are you wrong. The computer was first built using "TUBES".
>Don't you ever watch the Discovery channel?....
>
Yup. To make things "perfectly clear", I did not mean to imply that tubes couldn't be used as digital devices. It was my impression, however, that the tube bistate multivibrators which represented the 1's and 0's drove relays in their plate circuits to actually produce the make-or-break connections, if only for isolation purposes. It was also my understanding that there might be less total components used in building solid-state switches. And we must remember that many latterday tube computers used such mechanical devices for memory as magnetic drums, most likely because tube memory would have been so expensive. In our hypothetical example, this would not be a barrier.

Righto! It was always my intention to get a bunch of tube portables going
in case of Armagedon.

Question: if we posit vacuum tube IC'S, what sort of plate and screen
voltages would we be looking at? And would we have developed miniaturized
capacitors and resistors as we have done on the substrates of IC'S?

I have also often owondered as to the practicability of making tubes with
externally-heated cathodes for use, say, in extremely hot
environments. But this is getting off-topic.

I realize given the development of solid-state devices in parllel with the
last days of tubes (idde., the Compactron), that it's difficult to get
into the mind-set of engineers but what lay behind my assertion that
uponbes were analog devices which provoked such a storm was this
question: were tube-designers thinking "digitally"? That is, is it valid,
as some here have speculated, that e we have ended up with tube-like
IC'S? or would the wonderful linearity of tubes running Class A have led
us to some new and interesting ways of using analog devices to accomplish
signal processing?

Also, would tube development have come to the point where low-voltage (3
volts, say) tubes would have been produced with low current-drain
filaments? Without this, such things of satellite development would have
been tough IMHO. (Although Arthur C. Clarke *did* outline in his 1945
"Wireless Age" paper a 10-watt transmitter for satellites using tubes that
he felq practical).

Ain't this fun?

I guess it is possible that micromachining and cold cathode
emitters might have been developed independently of ICs. Optics
might have made progress without semiconductors. However,
we would not have had good computing power without semiconductor
IC's, so all these developments would have been delayed due to
a lack of automated tools.

:
: And so tube development and research stopped and the solid state era
: began...
:

There were a number of reasons that solid state devices overcame tubes,
but that process is still incomplete. The CRT still dominates the
TV and computer video market and we are well into 50 years of solid
state devices.

The early value of transistors was low power. Case in point was the
first general commercial use of transistors: hearing aids.

However, the value of solid state devices soared with the introduction of
monolythic integration (integrated circuits). Our computational
devices were doomed to be slow and stupid regardless of how complex
a transistor or tube circuit could be built. The propogation delays
of discrete components in a circuit that has 25,000 active elements
completely obviates the value of such complexity due to the sluggish
transit of electrons from element to element. Without the development
of the transistor, which largely lead to the developement of the IC,
we would be stuck in our ability to compute. The computers have
been our enabling tools for so many other advances, that the
technological revolution of the past 25 years would have been
just a lazy stroll in the sun.

I have several Collins 208U-3 3 KW 2-30Mhz RF Amplifiers. These are in good condition as removed from military service.

This is a military/commercial quality amplifier that uses a single 4CX3000A to produce 3 KW PEP or average power with only 0.2 watts of input.

These are automatically tuned with a servo system that takes about 10 seconds to tune-up.

The primary power input is 200-250VAC, 3Ph, 47-60Hz.

The net weight is 975Lbs, size: 32" x 23" x 70" Tall.

If you have 3Ph power and the room one of these superb Amplifiers would

make a great addition to your station.

I am offering these unpacked FOB Somis, CA as follows:

untested less the 4CX3000A Tube $3,000. unpacked.

I have a few NEW Guaranteed 4CX3000A tubes at $1,000. each

Crating by a professional packer is $350.00 additional.

A complete service manual is included at no charge.

There is a photo of this item on our web site

http://www.columbiaelectronics.com

I have a World War II vintage Navy/Bendix LM-18 Frequency Meter for
auction. This is in great shape and comes with the original manual.
You can own a piece of WWII history!
It is currently at $0.01 and there is no reserve!

Please visit:

2037. Heathkit SB-200 Testing (please help)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-12 00:00:00 UTC
From: goldenbadger@mindspring.com
Message-ID: <391b78fd.149497267@nntp.mindspring.com>
Source record: 66697

I've recently acquired an old SB-200 from an estate sale, in good condition and with documentation, however when I turn in on and set the meter to indicate the HV, I do not get any reading.

I've checked and high voltage is present in the unit, various restance checks from the manual are ok, and I've checked the continuity of various circuits. The meter even functions when I disconnect it and put an artificial voltage across it.

I've even used a signal tracer and followed an AF signal to the point where in enters the first tube at which point it stops, to continue it would either have to go on inside the tube or go through a 0.02uF capacitor to enter the next tube, and I'd don't know which one it is supposed to do so I can't tell if I have a problem there.

My basic question is could a bad tube cause this problem? My experience with tubes is very limited but growing.

Also if some kind soul with an SB-200 would like to help talk me through this, I'd sure appreciate it. I'm in the Knoxville, TN area.

Thanks
Bill

2039. Spring Swap Meet, this coming Saturday

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-12 00:00:00 UTC
From: Ron <kc4yoy@pop.trellis.net>
Message-ID: <01bfbbcf$cb115b80$4b4996d0@ron>
Source record: 66699

Coming up this weekend,
Saturday, May 13th the CC-AWA will
host the forth annual "Spring Swap Meet"
at the North Carolina Transportation Museum
"SPENCER SHOPS ".
...
This is a really nice museum with an operating Steam
powered train, a working "Round House",
and lots of interesting exhibits.
Bring the entire family.

The Swap Meet starts as soon as the Museum opens at 9am.
It will be in the picnic area under the shelters.

The admission to the museum and the Swap Meet is F R E E !!!!

Everyone is welcome, you do not have to be a member of the CC-AWA
to take part in this or any other CC-AWA sponsored event.

Spencer Shops is located in Spencer NC, just a short distance north
of Salisbury NC, and just off of I-85 at exit 79. Look for the large brown
signs that
will direct you to the North Carolina Transportation Museum,
SPENCER SHOPS.

Remember Spencer Shops doesn't open until 9am, there no need to get
there early.

73,

Ron

2040. Re: What If .. No xsistors

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-12 00:00:00 UTC
From: Cortland Richmond <Cortland.Richmond@usa.alcatel.com>
Message-ID: <391BBD6F.CF83D25D@usa.alcatel.com>
Source record: 66700
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

In the late 70's there was a new class of tubes developed for automotive use
that worked well with 12 volts on the plate.

Subject: FS: Yaesu FT726R VHF/UHF Allmode

Hi and thanks for reading this.

For Sale: Just in time for the upcoming VHF Sweepstakes!

Yaesu FT726R, VHF/UHF transceiver.

The radio has a built in AC supply, will run off 12 volts, and puts out 10W on all bands. Includes SSB, CW and FM. 10 memories, repeater offsets, full duplex, scan functions, IF shift, etc. This radio is in near mint (I would consider it a 9+) condition and includes the following accessories:

6M Module
2M Module
430-440 Module
Satellite Duplexer
CW Filter
Manual
Service Manual

Asking $700.00 or best offer, complete with all accessories. Sorry, I will not break up the until the rig is sold!

Subject: NC183D trade for an AM Transmitter

Hi Bob:

Have seen a few ads for the Viking II. I have one but did nt respond
because I thought you would get a nice offer.

But, if you have not got anything and are desperate - - - I have a Johnson
II CD model. This model was the latest and has at least one extra tube, a
cadmium plated chassis and a CD sticker on it. It worked continuously from
1.8 to 30 mhz. The problem is that the County that had it for CD stored it
carelessly so that the case and front panel is badly scratched. However,
you could have it repainted and silk-screened. I think there is a guy who
does that for something like $200 or so. All the knobs are nice so with the
paint and silkscreen it would be first class.

The NC-183D is a great radio and you will probably get a nice offer to
trade.

I live in Newberg, OR.

I was always going to restore it, but I first restored a Viking I and I love
it. so the 1 will probably be my 100 watt am rig.

If you're easily insulted, please don't go further.

In surfing the net and doing a search for "tube", I came across this web page,
and truthfully I find it hard to believe that any radio afficianado cold do
such as thing, but in 1986 it was reported in the medical journal SURGERY
MAGAZINE that there were 6 instances of people inserting a tube rectally. Now
this is only those who went to hospitals, so I'm sure the incidence is much
higher. Some of these are no doubt weirdos, but what does this suggest about
boatanchor types?

Nothing really. It doesn't suggest anything more about 'Boat Anchor
Types' than the 7 instances of light bulbs in the rectum suggest about
people that use light bulbs or the perfume bottle incident(s) suggest
about people that use perfume / cologne.

Of course! Just trying to get a rise out of these guys, that's all. Sounds pretty dumb to me, but the dumbest thing I found (following the links on that page) was a guy who inserted a frozen fish, but as it thawed, the fins (or something) became loose and prevented its removal.

It takes all kinds...

From: latebird@usa.net (Wikkit)
Subject: U.S. Army Frequency Meter

I've been told this is the approprite place for this sort of thing.

Today I bought a peice of interesting looking equipment bearing this label:

```
+----------------------------------------+
|SIGNAL CORPS U.S. ARMY|
| FREQUENCY METER TS-175/U |
| 85 TO 1000 MEGACYCLES |
| SERIAL NO. 62 ORDER NO. 90-DAY-45 |
| MADE BY |
|THE ALLEN D. CARDWELL MANUFACTURING CORP.|
+----------------------------------------+
```

Mr. Alan Douglas told me that this was used for calibrating radio
transmitters, and it was contracted for in 1945.

Can anyone tell me anything more about it, such as how many were made, if
it has any value, if it would be worth getting running again, or any other
information whatsoever?

Thanks,

Ben Brockert

I have 2 of 4X150A tubes, (Eimac, USA) 1 of 6883, 2 of OC3, 1 of 80 and one
marked 6DQ68/6GW6 which I don't have a clue what it is. Pulls from an old
telephone co. something or another. Don't have the facilities for testing,
but filaments have continuity (on those that have filaments)
Any use for these anybody? (or are they of any use for anything?)
I need some OA1's.
Hamish.

--0506-0856-46-PART-BREAK--

2043. TMC Technical Materiel Corp Website

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-12 00:00:00 UTC
From: denismarlene@sprint.CA
Message-ID: <391C0CE6.F1C1FA9E@sprint.ca>
Source record: 66703

Hi guys. Recent additions to the "manuals" section of the site should be of interest to owners of TMC gear. Also, check out the "pictures and seriel no.'s" section for some fine shots. Remember, Right click the image, then select View Image for better viewing.
More manuals soon, including the MSR-9, and the PAL-500 (and additions to the GPR-90RXD).
Enjoy
Denis

2044. General Electronic TN75 Xmtr

L.EGAL C.A.B.L.E TV DE-S.C.R.A.M.B.L.E.R

Want to watch Sporting Events?--Movies?--Pay-Per-View??

*This is the Famous R-O Shack TV D.e.s.c.r.a.m.b.l.e.r
You can assemble it from R,a,d,i,o S,h,a,c,k parts for about $12 to $15.

We Send You:
1, E-Z To follow Assembly Instructions.
2. E-Z To read Original Drawings.
3. Total Parts List.

**** PLUS SOMETHING NEW YOU MUST HAVE! ****
Something you can't do without.

THE UP-TO-DATE 6 PAGE REPORT:
USING A D-E-S-C-R-A-M-B-L-E-R LEGALLY

Warning: You should not build a T.V D.e.s.c.r.a.m.b.l.e.r
without reading this report first.

Frequently Asked Questions--CABLE TV DESCRAMBLER

Q: Will the d.e.s.c.r.a.m.b.l.e.r work on Fiber, TCI,
Jarrod and satellite systems?
A: The answer is YES. In respect to satellite,
you just get more stuff! There is one exception:
The descrambler will not work with DSS satellite.

Q: Do I need a converter box?
A: This plan works with or without a converter box.
Specific instructions are included in the plans for each!
Q: Can the cable company detect that I have the descrambler?

A: No, the signal descrambles right at the box and does
not move back through the line!

Q: Do I have to alter my existing c-a-b-l-e system,
television or VCR?
A: The answer is no!

Q: Does this work with my remote control?
A: The answer is yes. The descrambler is
manually controlled--but very easy to use!

Q: Can you email me the plans?
A: No the program comes with an easy to follow picture guide.

Q: Does this work everywhere across the country?
A: Yes, everywhere in the USA plus England,
Brazil, Canada and other countries!

Q: Is this deal guaranteed?
A: Yes, if you are unhappy for any reason we will refund your money.

Q: When I order, when will I get my package?
A: We mail out all orders within 24 hours of receiving them.

Q: How much does it cost to get the instruction
plans, the easy to follow diagram, and most
important of all the "Using a D-e-s-c-r-a-m-b-l-e-r LEGALLY Report".
A: You get the complete 6 page report and instruction package all for just--$10.00

Q: How do I order?
A: Fill out form below and send it, along
with your $10.00 payment to:

C-a-b-l-e-F-R-E-E-TV
1342 East Vine Str #218
Kissimmee Fl 34744

(Cash, Check or Money Order.)

(Florida residents include 7% Florida State Sales Tax)

(All orders outside the U.S.A. add $5.00)

From: goldenbadger@mindspring.com
Subject: Heathkit SB-200 Testing (please help)

I've recently acquired an old SB-200 from an estate sale, in good
condition and with documentation, however when I turn in on and set
the meter to indicate the HV, I do not get any reading.

I've checked and high voltage is present in the unit, various restance
checks from the manual are ok, and I've checked the continuity of
various circuits. The meter even functions when I disconnect it and
put an artificial voltage across it.

I've even used a signal tracer and followed an AF signal to the point
where in enters the first tube at which point it stops, to continue it
would either have to go on inside the tube or go through a 0.02uF
capacitor to enter the next tube, and I'd don't know which one it is
supposed to do so I can't tell if I have a problem there.

My basic question is could a bad tube cause this problem? My
experience with tubes is very limited but growing.

Also if some kind soul with an SB-200 would like to help talk me
through this, I'd sure appreciate it. I'm in the Knoxville, TN area.

Thanks
Bill

Subject: HW-29; need some help

I picked up an old Heath 6M lunchbox, as much for the fun of reworking an old tube set and getting it on the air as getting on six. I have a few questions about the set that I am sure some of the old hands could answer:

1) The set has a mod in it that appears to be either a Heath option/retrofit or a very clean 3rd party add-on. It is a small bracket with a crystal socket, a 6AK5, a slug adjustable adjustable LC, and a few other parts. A wire from the mod plugs into one side of the original crystal socket through a small silver mica C. The manual that came with the radio is for a HW-29A, and the front panel on this set states that it is a HW-29, so it's not much help..

Subject: Spring Swap Meet, this coming Saturday

Coming up this weekend,
Saturday, May 13th the CC-AWA will
host the forth annual "Spring Swap Meet"
at the North Carolina Transportation Museum
"SPENCER SHOPS ".
...
This is a really nice museum with an operating Steam
powered train, a working "Round House",
and lots of interesting exhibits.
Bring the entire family.

The Swap Meet starts as soon as the Museum opens at 9am.
It will be in the picnic area under the shelters.

The admission to the museum and the Swap Meet is F R E E !!!!

Everyone is welcome, you do not have to be a member of the CC-AWA
to take part in this or any other CC-AWA sponsored event.

Spencer Shops is located in Spencer NC, just a short distance north
of Salisbury NC, and just off of I-85 at exit 79. Look for the large brown
signs that
will direct you to the North Carolina Transportation Museum,
SPENCER SHOPS.

Remember Spencer Shops doesn't open until 9am, there no need to get
there early.

73,

Ron

Not really. The first generations of computers used tubes. ENIAC, the first
full scale general purpose digital electronic computer, used 18,000 of them. By
the mid '50s, the giant SAGE system used 44,000 tubes.

Spread spectrum was invented in the '40s. One of the the coinventors was Hedy
Lamarr (yes, THAT Hedy Lamarr).

One of the best kept secrets of WW2 was the proximity fuse. This was a small
radar set that was installed in the nose of all types of artillery shells, and
would detonate the shell when it neared an aircraft or other large, conductive
target. Each fuse used four subminiature tubes, and had to withstand severe
conditions (months of storage, use in all climates, 20,000 G shock, no
adjustments, and near-zero chance of false detonation). All of these problems

were solved, and the fuses were produced by the millions.

Perhaps.

Here's another thought:

Could the transistor have been developed without the tube coming first?

Hi,

Jim asked: Could the transistor have been developed without the
tube coming first?

I think so, as an off growth of Crystal Sets on the receiver
side, however on the Transmitter side without Tubes, it would
have stopped with a form of spark gap for transmitting.

I think it would have taken much longer to get where we are
or even were we with the radio science in say WW2.

What do you all think?

Friend of mine was in the AF and one of his better assignments was to
examine some of the avionics that were removed from a Mig-25 that
was-ahem-misappropriated by a Soviet pilot and flown to Japan. Big
international incident. Also revealed that the Soviets were using a lot
of steel structural elements rather than titanium, range of this bird at
best cruise was only about 800 miles. A good chunk of the avionics suite
was vacuum tube stuff, used a lot of power but largely immune to the big
EMP that nukewar could bring.

I've also seen the recreated chunk of the Berry-Atanasoff computer in the Iowa Historical Society building in Des Moines-it is about the size of a desk. Lots of triodes. let it be a lesson to folks who have developed something unique to take the time and patent their ideas.
Cheers
Robert

Er, it's not terrribly practical. I suspect all the radium in the world
dosnt put out more than a few milliamps at best.

One curie is
a whopping amount of radiation,
37 billion electrons per second, but that's less than a
micro-micro-micro-amp.

There's no reason you couldn't do digital switching with a tube; you can do
it with any device that can be transitioned quickly from hard conducting to
hard cutoff.

Also take a look at http://www.computer50.org

They have built a replica of the "Small Scale Experimental Machine" which was
the prototype of the Manchester Mk1 computer. The SSEM ran its first stored
program on 21st June 1948, You can download an emulator and try programming
it yourself... 32-bit registers BTW ;-) We are now coming up to the 50th
anniversary of the first computer sold to a private customer (sold in 1951).
I think by now we would have had fairly complex computers, even without
transistors, but they would have filled whole buildings!

Doesn't the emission of the thoriated tungsten filament decrease
markedly over time too? How long? Do Beta particles go through glass?
If so, you could have replaceable radio filaments, just a little 'dent'
in the glass where you clamp a piece of uranium or whatever...then the
tubes would last forever, barring physical damage...

Seems to me years ago I read a Science Fiction story that postulated the
development of chemical engineering to a high degree, while electricity had yet
to be discovered. They were at the point where they were launching manned
rockets, but having a few problems with guidance, etc. Someone was trying to
convince them to look again at an experiment they all did in college, where two
dissimilar metals were immersed in a mild acid, and when touched together,
bubbles formed. "Why does there have to be contact?" But the powers that be

were too involved in the direction they were going to listen.

Although the thorium is a radioactive element, it is used for its thermionic
emissions properties (much better than pure tungsten), not for its radioactive
properties.

BTW, thorium also makes the tungsten wire more ductile, and thus easier to draw
and bend, which is why GE was using toriated tungsten to make lightbulbs at the
time the guys in the tube works ran out of tungsten wire for filaments and went
over to borrow some tungsten wire, only to discover a much better material for
filaments (vis '01 vs. '01A triodes).

Yup. To make things "perfectly clear", I did not mean to imply that tubes
couldn't be used as digital devices. It was my impression, however, that
the tube bistate multivibrators which represented the 1's and 0's drove
relays in their plate circuits to actually produce the make-or-break
connections, if only for isolation purposes. It was also my understanding
that there might be less total components used in building solid-state
switches. And we must remember that many latterday tube computers used
such mechanical devices for memory as magnetic drums, most likely because
tube memory would have been so expensive. In our hypothetical example,
this would not be a barrier.

Righto! It was always my intention to get a bunch of tube portables going
in case of Armagedon.

Question: if we posit vacuum tube IC'S, what sort of plate and screen
voltages would we be looking at? And would we have developed miniaturized
capacitors and resistors as we have done on the substrates of IC'S?

I have also often owondered as to the practicability of making tubes with
externally-heated cathodes for use, say, in extremely hot
environments. But this is getting off-topic.

I realize given the development of solid-state devices in parllel with the
last days of tubes (idde., the Compactron), that it's difficult to get
into the mind-set of engineers but what lay behind my assertion that
uponbes were analog devices which provoked such a storm was this
question: were tube-designers thinking "digitally"? That is, is it valid,
as some here have speculated, that e we have ended up with tube-like
IC'S? or would the wonderful linearity of tubes running Class A have led
us to some new and interesting ways of using analog devices to accomplish
signal processing?

Also, would tube development have come to the point where low-voltage (3
volts, say) tubes would have been produced with low current-drain
filaments? Without this, such things of satellite development would have
been tough IMHO. (Although Arthur C. Clarke *did* outline in his 1945
"Wireless Age" paper a 10-watt transmitter for satellites using tubes that
he felq practical).

Ain't this fun?

Where did you do your measurements to determine high voltage is present?
Across the capacitor bank, across the tube plates? You said you purchased
it from an estate sale...are the switch contacts clean (I had literally no
power from my HT-37 when I first got it, and after dismantling it and
looking under every rock, it was a very dirty band switch contact that was
the culprit....).
>

>My basic question is could a bad tube cause this problem? My
>experience with tubes is very limited but growing.

BE CAREFULL -- THERE ARE LETHAL VOLTAGES LURKING AROUND IN THERE. It seems
that the signal path is getting to the first tube. I'd check that the
voltages at the tube itself are correct. If they are, then your problem
might be in the metering circuit. If they aren't, then you meter is
probably alright, and you're lost HV somewhere along the line. Start
backwards from the tubes, or forewards from the transformer output, and
measure voltages at various points. Sooner or later you'll find a place
where the voltage is gone. Use the schematics and do it systematically.

I'll try to find my SB-200 manual, but since we just moved into our house
(last Dec), we still have about 50 boxes in the attic. I suspect someone
else on this NG will have a manual handy. BE CAREFULL!!

No, the first computers were fully electronic - no relays, relays are
way too slow for this type of thing! Tommy Flowers who built the
first such device in 1943 built it to replace a machine that was too
slow because it used relays. Relays couldn't keep up with the 25,000
bits per sec of the tubes!

Interesting, I wonder if theres anything on the web, must take a look.
I'm always interested in reading about the early machines, from Collosus
onward - although Collosus wasn't a _real_ computer as we understand it.

I'm currently playing about with an emulator of Cambridge Universitys EDSAC
computer of 1949 (probably the worlds first _practical_ computer) - it plays
a mean game of tic-tac-toe complete with the original graphics ;-)
I wonder if there's an ENIAC emulator anywhere?

Mike they did not use relays to produce the 1/0s. A diode tube will
conduct and not conduct giving you the 1/0 that is needed for the
array..

Er, that was the late 50's, not late 70's.

My father's 58 Edsel had this kind tubes in its radio.

I went to work for IBM as a customer engineer just after their computers
went all solid state, but I used to have some of the plug in modules
from one of the tube type models. Used tons of 12AX7s, but no relays.
Some tube type computers used magnetic core storage.

Ray,

browsing this ng I found the following webpage that gives quite a
reasonable picture of the T-195 front panel:
http://web2.airmail.net/fledda/radio_GRC19.html

Looking at my T-195 manual, the rh meter certainly is scaled in VU.
Can't tell what size it is, but it looks to be identical in style and
type to the left hand one.

If you find one, please let me know where you found it, as I need one
for my T-195 as well!

If you also know where to get plugs/sockets for the internal modules, or
alternatively "board extenders" - I would be glad to hear about those
too. Its virtually impossible to work on the set with power applied and
the modules in place.

For Sale: Hallicrafters HT-33A amplifier, homebrew antenna relays and original manual (manual is in poor condition). I believe this is about 1475 Watts or so input, into a single PL-172A tube with a built-in power supply. Unit is in great shape and will be packed with care tube and relays packed in separate package. I am going to the Dayton Hamvention so buyer could arrange pick-up at the KOA just north of the Hamvention and save on shipping! Or I could ship to you. If shipped, buyer to pay all of shipping and $50 towards packing material. I am asking $350 for this unit and have digital pictures available upon request. As with all electronics, there is no warranty

Thanks for looking

Hi Folks:

I've been licenced for 23 years, currently VE7ZD, and am in graduate school up here near Vancouver, BC.

I'm researching amateur radio and its history. I'm specifically interested in inventions, discoveries, or techniques that were developed within amateur radio and later spread to the electronics industry. Similarly, some of our operating techniques and procedures were later widely adopted by other services.

Hams operate outside of the structured environments within industry, and I think that this freedom has permitted us to invent and discover without being shackled by any policy issues, or possible stigmatism from investigating things that would be considered "too far out in left field" by management and non-ham co-workers.

Examples would be the investigation of wavelengths below 200 meters, with the discovery by hams that such wavelengths were better for propagation than longer waves; packet radio; APRS; propagation studies that were undertaken in the 20s and 30s; facsimile; SSTV; and network operating techniques.

Some of this stuff was regulated, such as the banishment of amateur radio to the "useless" wavelengths < 200 M, but this sort of proves my point. There's been lots of innovation within the hobby, and the general public now benefits from it.

If anyone could provide me with more examples, or good books or articles on this topic, then that'd be great. Of course I'll give appropriate credit to those who assist!

If you could email me as well as posting your reply, thanks. There's lots of traffic in these groups and I don't want to miss any replies.

73,

Kevin VE7ZD

How about if I start you off with a pointer to a piece by the guy who invented SSTV, Copthorne Macdonald, VY2CM, in his own words. SSTV was invented at the University of Kentucky, in Lexington, Kentucky.

http://www.ultranet.com/~sstv/history/

Dave

P.S. Standard Disclaimer: I work for them, but I don't speak for them.

2063. What's the mystery tube?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-12 00:00:00 UTC
From: "Mr. Wires" <NOSPAMwires@bigfoot.com>
Message-ID: <391C53E6.D60F177C@bigfoot.com>
Source record: 66723

Can anyone identify what kind of tube this is & what it was used for?

It's marked "JAN-CIM-15E", & carries the "Eimac" brand. Markings
(ratings?) stamped on one side of the box read:

Ep = 1000 v

Ip = 0.5 ma

Eg = "46" is written in pencil here

"Peak a - 46" is also written in pencil at the top of all these
markings.

I have posted pictures of the tube & box at:

http://members.xoom.com/_XMCM/studio_tech/tube.html

I am guessing that this is some kind of transmitter tube.
I have a number of these NIB. Are these only good for
target practice?!

Thanks,

Mr. Wires (post here or delete "NOSPAM" to e-mail)

>[stuff deleted]

Packet radio already existed. Somebody (I can't remember his position or whether he was a ham) in what was then the Department of Communications here in Canada, with a name like deMercado, had had some experience with Aloha Net in Hawaii. He decided it was time for hams to move forward, and so he changed the rules in Canada to allow packet radio, and introduced the Digital License. That license carried no code test, but what was said to be a more complicated theory test, and was VHF only, maybe restricted to certain bands. I thought there was also a segement or two set aside for packet that only Digital License holders could use. I remember he came and talked to one of the local clubs in 1977 or 78, so long ago that the details are vague.

So it's debatable how much ham radio influenced packet radio. On the other hand, I don't dismiss the value to some individuals, who got it going in ham radio and played with it, and used that experience in the commericial area.

I think the influence of ham radio on technology in recent years has diminished. That's less important than whether it is still affecting the young, getting them interested in electronics and radio at a young age and providing them with a place to play with these things.

But up till a certain point, ham radio was basically synonomous with electronics and or radio. You don't have to go any further than Howard Armstrong, who was a ham first and it could be said his work was nothing more than an extension of ham radio, even if it influenced radio tremendously; regeneration (and regenerative receivers) the superheterodyne receiver, the superregenerative receiver and practical FM. You can't do anything in radio without one or more of those things.

A lot of the oscillator circuits are named after people who happened to be hams.

I thought practical narrow band FM for two way communication came from a ham, something like the guy who started Sonar, but that is based on some remembrance.

Amateur satellites certainly must have helped the field. The first OSCAR went up only a few years after Sputnik and must have cost significantly less. The concept of a piggyback launch came from OSCAR, and certainly others have taken advantage of that. There have in recent years been "OSCAR-type" satellites, ie relativley simple and inexpensive, which have probably been mainly experimental but have either helped provide a training ground for satellite work or helped "third world countries" in some way.

And you can find examples of hams supplying practical experience (gained from the hobby) in some of the important projects of the last century. I can't get to it easily, but I read a book about Benchley Park during World War II where they worked on what the other side was doing, and the author mentions right at the end the importance of hams in the practical experience they brought to the process. I think there was a similar mention in a book about radar development during WWII. People would come out of the universites, and know all the theory, but be lost when it came to practical work, but hams had that down because of building their own equipment. And of course when WWII started up, hams ended up filling various technical roles in the armed services.

I thought the first person to play with radio astronomy was a ham. If it was't someone who followed up was.

The US Army tried moonbounce in the forties or fifties, but they needed big arrays and lots of power. Hams followed, using much simpler equipment. I'm not so certain moonbounce has much practical use for society other than hams, since others can put up satellites while hams are somewhat limited, but the process of advancing the art may be as important as whether the technology actually migrates elsewhere.

A lot of the history has been written. The ARRL had or has some books on the history, including that one about "200 meters and down...". "Empire of the Air" by Tom Lewis (and it was a Ken Burns PBS show some years back) dealt with Armstrong, Sarnoff and DeForest and probably is fairly available. There was a book about Armstrong, I can't find my copy right now, first published in the fifties and then in the sixties by Bantam Paperback, that I've found in used book stores that provides good, though not too technical, coverage of his life.

Since you can now get QST easily on CDROM, it would be worth getting the early years, actually get the whole set if you've got the money, and then you can see the history unfolding as it happened. The other ham magazines may not be as useful, since they came later, and more important they aren't as available so cheaply or conveniently.

Once you have the ham history, then you can start exploring where it fits into the rest of electronic/radio history. Whether it was simply implementing something discovered elsewhere, or had impact on society beyond ham radio.

And you might want to dig up an article by John W. Campbell (yes the legendary editor of Astounding/Analog SF magazine) who was a ham and once upon a time wrote some technical articles for CQ. He once wrote an article about "How to be an Amateur" pointing out some of the benefits hams have to innovate for the simple reason that they aren't bound by corporations. I think it was published in an early issue of 73, and then reprinted once or twice. 1971 comes to mind.

For those not liking Ebay, or auctions, I have a very clean UN-modified HW-12A, with matching HP-23 AC supply and cables, plus original manual - works perfect and looks great! All for $100 + shipping. No music, no cute lil' dolls - just a good buy in a good radio!

Hi Gang,

Well, after recovering from a computer crash of epic proportion I am able to repost the following:

I have for sale several sections of Andrew hardline coax. All used sections were installed and removed by a professional tower crew. All ends have been sealed. All are in good shape. Prices are per linear foot. I will consider discounts if several sections are purchased at once. Get your buddies together and save some money. Here is a list:

60' 1 5/8" $2.00
125' 1 5/8" $3.00
150' 1 5/8" $3.00
215' 1 5/8" $3.00
100' 1 5/8" $2.00
100' 1 5/8" $2.00
100' 1 5/8" $2.00
125' 1 5/8" $2.00
125' 1 5/8" NEW!! $5.00
140' 1 5/8" $2.00
215' 1 5/8" $3.00
45' 7/8" $2.00
35' 1/2" $1.00
40' 1/2" $1.00

All items are pick up in central Iowa. Shipping can be arranged at the buyer's expense. Yellow Freight will ship to almost anywhere. You can reach me at 515-243-5293 or of course email is OK. I apologize to those who may have emailed me and received no response. Thanks and 73,

Alan

correction - the first computer in a modern sense was designed
by charles babbage, his wife, ada agusta countess of lovelace
wrote programs for it - it was mechanical in its entirety.

one could also say that the frieden calculator and other such
things were "computers" hence I think it makes sense to limit
it to "programmable" computers. there were also analog
computers including mechanical differential engines that were
programmable long before there were digital programmable
computers. The norton bombsight is an example of a rather
primitive programmable analog computer that is mechanical.
some early flight simulators were also mechanical

The 15E is a VHF/UHF triode. It was used as a pulsed oscillator (single or push-pull) or amplifier in many World War II IFF systems including the BN. It found application in airborne intercept radar transmitters and jammers.

I thought about FEDs as a possibility, but have rejected it for now. I even thought about micromachines as a possibility without semiconductors. In both cases the physics of semiconductor materials is too important for operation. Perhaps some microfluid designs would have been developed. Another possibility is a vacuum IC. That is, a large number of small components in a vacuum chamber. It is interesting how the success of current optical systems hing on semiconductors right now.

Subject: FS: Hallicrafters HT-33A

For Sale: Hallicrafters HT-33A amplifier, homebrew antenna relays and original manual (manual is in poor condition). I believe this is about 1475 Watts or so input, into a single PL-172A tube with a built-in power supply. Unit is in great shape and will be packed with care tube and relays packed in separate package. I am going to the Dayton Hamvention so buyer could arrange pick-up at the KOA just north of the Hamvention and save on shipping! Or I could ship to you. If shipped, buyer to pay all of shipping and $50 towards packing material. I am asking $350 for

this unit and have digital pictures available upon request. As with all
electronics, there is no warranty

Thanks for looking
73,
Eric

Where did you do your measurements to determine high voltage is present?
Across the capacitor bank, across the tube plates? You said you purchased
it from an estate sale...are the switch contacts clean (I had literally no
power from my HT-37 when I first got it, and after dismantling it and
looking under every rock, it was a very dirty band switch contact that was
the culprit....).

>
>My basic question is could a bad tube cause this problem? My
>experience with tubes is very limited but growing.

BE CAREFULL -- THERE ARE LETHAL VOLTAGES LURKING AROUND IN THERE. It seems
that the signal path is getting to the first tube. I'd check that the
voltages at the tube itself are correct. If they are, then your problem
might be in the metering circuit. If they aren't, then you meter is
probably alright, and you're lost HV somewhere along the line. Start
backwards from the tubes, or forewards from the transformer output, and
measure voltages at various points. Sooner or later you'll find a place
where the voltage is gone. Use the schematics and do it systematically.

I'll try to find my SB-200 manual, but since we just moved into our house
(last Dec), we still have about 50 boxes in the attic. I suspect someone
else on this NG will have a manual handy. BE CAREFULL!!

You are probably getting no replies for two reasons. Firstly you are asking
in the wrong place - its unlikely that a US-based ng will know much about a

piece of UK equipment - try asking in UK groups - particularly the uk vintage radio list (details on request). I can suggest an excellent article in Radio Bygones for instance. You will probably find someone who can supply a copy of the manual - though I don't have one myself.

Secondly, anyone suggesting modifying any classic Rx, such as the CR100, is liable to get ignored, as the days of modifying things like this "to make them better" are for most of us long forgotten. This is a piece of history you have - not a pile of bits to be messed with! You will find that if you return it to its original working state - perfectly feasible - then you will have a reasonably good receiver that will give quite pleasing performance on the lower HF bands. It will not be brilliant on SSB - but then it was never designed to be.

You will also find that a fully restored CR100 has some value - and you can sell it or swop it for something else, should you wish to do so at some future date. Modifications will only reduce its value these days - regardless of how clever they may be, or how much the performance has been improved.

>
> --
> Regards
> Ray

Ray,

browsing this ng I found the following webpage that gives quite a reasonable picture of the T-195 front panel:
http://web2.airmail.net/fledda/radio_GRC19.html

Looking at my T-195 manual, the rh meter certainly is scaled in VU. Can't tell what size it is, but it looks to be identical in style and type to the left hand one.

If you find one, please let me know where you found it, as I need one
for my T-195 as well!

If you also know where to get plugs/sockets for the internal modules, or
alternatively "board extenders" - I would be glad to hear about those
too. Its virtually impossible to work on the set with power applied and
the modules in place.

From: "Mr. Wires"
Subject: What's the mystery tube?

Can anyone identify what kind of tube this is & what it was used for?

It's marked "JAN-CIM-15E", & carries the "Eimac" brand. Markings
(ratings?) stamped on one side of the box read:

Ep = 1000 v

Ip = 0.5 ma

Eg = "46" is written in pencil here

"Peak a - 46" is also written in pencil at the top of all these
markings.

I have posted pictures of the tube & box at:

http://members.xoom.com/_XMCM/studio_tech/tube.html

I am guessing that this is some kind of transmitter tube.
I have a number of these NIB. Are these only good for
target practice?!

Thanks,

Mr. Wires (post here or delete "NOSPAM" to e-mail)

Subject: What's the mystery tube?

The 15E is a VHF/UHF triode. It was used as a pulsed oscillator (single
or push-pull) or amplifier in many World War II IFF systems including the
BN. It found application in airborne intercept radar transmitters and
jammers.

Interesting, I wonder if theres anything on the web, must take a look.
I'm always interested in reading about the early machines, from Collosus
onward - although Collosus wasn't a _real_ computer as we understand it.

I'm currently playing about with an emulator of Cambridge Universitys EDSAC
computer of 1949 (probably the worlds first _practical_ computer) - it plays
a mean game of tic-tac-toe complete with the original graphics ;-)
I wonder if there's an ENIAC emulator anywhere?

No, the first computers were fully electronic - no relays, relays are
way too slow for this type of thing! Tommy Flowers who built the
first such device in 1943 built it to replace a machine that was too
slow because it used relays. Relays couldn't keep up with the 25,000
bits per sec of the tubes!

I went to work for IBM as a customer engineer just after their computers
went all solid state, but I used to have some of the plug in modules
from one of the tube type models. Used tons of 12AX7s, but no relays.
Some tube type computers used magnetic core storage.

From: General Mark Morgan
Subject: What If .. No xsistors

Mike they did not use relays to produce the 1/0s. A diode tube will
conduct and not conduct giving you the 1/0 that is needed for the
array..

correction - the first computer in a modern sense was designed
by charles babbage, his wife, ada agusta countess of lovelace
wrote programs for it - it was mechanical in its entirety.

one could also say that the frieden calculator and other such
things were "computers" hence I think it makes sense to limit
it to "programmable" computers. there were also analog
computers including mechanical differential engines that were
programmable long before there were digital programmable
computers. The norton bombsight is an example of a rather
primitive programmable analog computer that is mechanical.
some early flight simulators were also mechanical

In school, in an analog ckt analysis class, our professor pointed out that the first analog tube computer's results were instantaeous (as he would say "for all practical purposes") compared to today's fastest digital computers. O'scopes were used for viewing the results of an integration or differential by using different types of amplifiers.

He and I were taking a smoke break once and were talking about how things would be different if digital computers never took off like they did.

He pointed out that, just because something is widely used doesn't meant it is the best way...

Maybe most computer designers are like me; hated doing calculus and would rather deal with logic circuits

From: "Nico van Dongen"
Subject: FS: British WWII Spitfire morse key

I have a W.W.II British Air Ministry Morse key for sale.

The key is labeled: AM Type B. Ref No5c/372 Switchbox
Identification. It was used on the Spitfire but also on other planes of those days. It was used to key the Navigation and/or Landing lights for identification purposes when radio was not available or not allowed. The key is made of Bakelite, round, 3.5" in diameter and 1" thick. The key protrudes out of the front just below two lever switches marked Downward and Upward respectively. The switches have three positions: Morse, Off and Steady. The key is in very good condition and I doubt if it is ever been installed. The knob of the key is made of copper or bronze or something like it and the paint came of a bit, but that can be restored in 5 minutes. Should you be interested, I'm asking 75 US$ or 50 UKP, shipping cost from Holland will be 15$ to the US and 7 UKP to the UK.

I have a picture of the Key available that I can Email.

From: "Mike Linger"
Subject: FS: Heavy duty rotor& control

FS: I have a killer hair-monger antenna rotor that resembles the Telex geardrive type. It was built by Wilson and the rotor part is quite heavy. It has the control head and works just fine. It is so powerful that it was found at a car dealership rotating the display car table. The display unit doesn't look that great and would need re-painting. The limit switch on the rotor was obviously disconnected for continuous rotation. I want $100 for it all.......Mike.

Date: 07 May 2000 15:19:48 GMT
From: k9sqg@aol.com (K9SQG)
Subject: FS: insulator or paperweight

For sale, brand new, steatite antenna insulator. Can be used for that monster antenna or as a conversation piece or paperweight. You don't see these very often! White color, about 7.25 inches long, 1 and 5/8 wide, and 1 1/8 thick. Hole in each end about 3/8 inch diameter. Will sell for $3 and whatever the shipping costs will be. I have more than one if you'd like some as gifts. You won't flash this one over no matter how much power you run!

From: "Mark Bell"
Subject: HT-32 Question

Did Hallicrafters make two different variants of the HT-32 Mark I ?

I'm working on an HT-32, and the factory ID card on the back chassis says HT-32 as does the front panel. However, inside it's stamped "B Mark I" with 199828 beneath it.

I purchased a parts radio just recently that is stamped, on the inside "299924 A" with "Mark I" beneath. This chassis is greatly gutted, but the back has two different items of interest. The first is a two prong plug (like the fan plug on the chassis top) labled "AC Outlet 2 Amp Max". The second is a 1/4 Phone type jack labled "FSK". The rear AC outlet is stock, and the FSK label looks original also.

Both are stamped Mark I on the insides!

Any ideas?

Also, I'm not able to download the HT-32 Mark I photos and the HT-32 A photos from the HCA site. Is the front panel of an HT-32A labled HT-32A?

Thanks

Mark K3ZX

Subject: U.S. Army Frequency Meter

On 6-May-2000, latebird@usa.net (Wikkit) wrote:

Here is what my 'master index file' says for TS-175/U
hope it helps you somewhat...

85 to 1000 Mc - battery operated
oscillator fundamental freq. is 85 to 200 Mc
uses 6Vdc and 135Vdc
has audio modulation of 1000 Hz
(it is sort of a VHF BC-221..) Tech. manual is TM 11-5050

An ad from back in the 1960s for this unit said:
"Portable, crystal controlled heterodyne type unit used in field
testing of CW or MCW RF Transmitters and signal generators."

In 1963 Selectronics sold them for $175
In 1963 Columbia Electronics sold them for $135
In 1964 Barry Electronics sold them for $145
In 1963 Thermo sold them for $67.50
In 1964 Slep Electronics sold them for $60

Unfortunately, my 'master library' does not have a copy of TM11-5050.

From: petee100@aol.com (PeteE100)
Subject: Vacuum tubes for sale

I have about 550 vacuum tubes for sale. 90% are RCA, new and unused. The rest
are slightly used and/or other brands. The list below shows the models
available. The digit after the model indicates the quantity available.

Send me email at petee100@aol.com if you have an interest in purchasing these
tubes. I would prefer to sell the whole lot rather than in bits and pieces but
if you're interested in a few specific units let me know and we might be able
to work something. Thanks.

Subject: Wanted: HP23 or similar Power Supply for an old rig

I require an old hp23 heath type power supply or equivilent to run an
old piece of equipment hw12 im working on. I live near ottawa Ont.
It need not even be working ..i could fix one up for my purposes.

Subject: WTB: Lafayette HA-410 10 meter rig

Greetings!

I have aquired a really nice HA-460, 6 meter rig. I get vey good audio
reports on this radio that has not been used in years. I was thinking
about maybe getting on 10 meter AM with a transceiver, just for grins
and would be real interested in the 10 meter version of this rig.
Iffin' ya have one for sale, please e-mail at:

dw73454@alltel.net

Thanks es

2099. WTT HP Dig. scope for TEK

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-13 00:00:00 UTC

I have a virtually NIB condition HP 54600A 2-channel, 100MHz digital scope. This is the one with the all the automatic measurement cursors, etc. It comes with the accessory pouch, probe set, operating and maintenance manual, programming manual, floppy disk, and 2 HP 54658A Measurement/Storage modules that mount on the rear of the unit. I'll even add a serial cable. I'm looking to trade this digital unit for several older analog units (I'm from the old school). I'll accept offers of TEK 465B's and 475A's in trade. Minimum would be 2 465A's and one 475A. Ex-military 465's are not acceptable. Trades must be in similar condition, but don't have to be in cal. As always, I'm open to dialog (hi). I can scan and email the HP catalog page if someone doesn't know the unit, already.

Still looking for the elusive Hallicrafters HT-20 and HT32A/SX-101A combo.
Thanks for the read. de K3HVG

I remember dismantling an old bombsight computer in the late 50s...
We have a very nice old tidal computer near here*, uses pulleys and
string (or rather wire)! It produced tide tables until quite recently.

* Actually at Bidston Observatory on the Wirral Peninsula, across the
river from Liverpool, UK.

> he's out of the Middle East and the Middle East is finished, the future for
> this and that ....." That was the end of the American news in about
> three sentences! No other detail, so I said we would go back at about 12.30,
> and hope that Ah Ping hadn't pulled the voltage down too far, to see what we
> could hear. Again, the BBC was a little low but it suddenly came quite
> bright and lifted in volume, and Big Ben chimed again and there was a voice
> in the wilderness calling. It was a lovely sensation to hear Big Ben playing
> in those days, and every time I hear it now I become excited. The
> announcement, initially in a most depressing vein, described all about the
> 8th Army's movements, and it was here that it did this, and this regiment
> drew up and did that, on and on this went for something like 15 to 20
> minutes, and we tried not to follow it because we had our eyes on too many
> other things, look-outs and so on. But a lovely flow of English and if you
> had a tracing board you could have traced out exactly where everything was
> in situ, but of course that wasn't the aim of our exercise which was to get
> news. At the finish of the news the polite sentence said "It must be
> considered now that as all resistance in North Africa has been overcome the
> Allies victory must be "assured" or something like that. And that was all he
> said, but he took a few minutes to describe everything that happened, so you
> had a clear picture. But the Americans seemed to be creating for a public
> that just wanted the headlines, three headlines and that was all; no other
> interest in anything else. That was one of the happy moments of the system.
> We had the problem, of course, of writing the news because naturally a lot
> of people wanted to know it and a lot of people could be told it without its

> origin. This is why we used the piece of paper we took with us (Gordon Waite
> and the other officer who used to share some of the work), and as soon as we
> heard about 30 bombers over Dresden or something, you just put 30 BD, or B
> for Berlin, and feel the paper down when you felt it coming to the end, and
> pick up the next little bit of bend and write along that in the pitch dark,
> hoping that you've got something in the morning. Surprising how legible it
> was, just triggered a couple of words like that. Unfortunately, I was in
> deep custodianship with the Kempitai when the Atom Bombs were dropped and I
> didn't hear that news on the BBC; it was relayed to me. We didn't keep these
> things, of course.
> Getting off the technical side now, the radio set didn't betray itself. Some
> criticism could be levelled at us I suppose. We trusted too many people; we
> had no intelligence training then, of course, or anything like that and we
> were inclined to trust every Asian we met who smiled at us and who said he
> was one of us. Anyway, while this was going on at the aerodrome and once the
> troops heard, we had to tell the troops the good news of course. We said we
> had heard from an unknown source that the war is getting better, or
> something like that - we had to give them a sanitised version. It was
> probably all they wanted but, naturally, two or three senior officers wanted
> to know as much as they could because they may be the ones who would have to
> take some decisions one day about it.
> Unknown to us an Indian - I don't like saying this and I'm not being racist,
> it could have been any nationality - blackmailed a Chinese who was helping
> us on the aerodrome picking up bits of iron for us and various other things.
> He blackmailed him but the Chinese wouldn't talk, so the Kempitai arrested
> the Chinese and put him on a rack; he mentioned in the course of his cries
> for help - which was not a nice thing to think about but I don't blame him -
> he mentioned Captain Matthews and a couple of other people; I think I would
> have done the same thing at that stage.
> The Japanese then decided to make a raid on the camp, which they did, and I
> was then charged and taken away by the Captain; he wanted the receiver and I
> gave it to him in the end after a lot of leading him round the camp with his
> soldiers. I could almost laugh at some of the things that happened. He must
> have told them he was looking for a radio set; a Jap soldier came running up
> to him with a piece of metal which looked like a piece of horse harness or
> something; the Captain almost kicked him and told him what to do. So in the
> end I decided that I couldn't talk to anybody before the rest of the troops
> on this parade ground, and I felt so conspicuous. He walked back and said
> "Are you going to tell me because we want the wireless set?", so I said
> "Yes, I've just thought where it might be". So I went across and told him
> where the hole was, and they dug the hole up and, of course, there was the
> transmitter. He said "Ah, you've been sensible at last", so he took the
> transmitter and they took it away.
> >From that day on, I was worried about this because I knew the receiver was
> OK and the troops would be happy about that; they would still be able to get
> news. And then he took me up to the platform where he stood and addressed
> everyone. All he said in English was "You all look at this man, you will
> never see him again" and led me off. I had a sort of a dying wish, going in
> on the vehicle to Sandakan to be interrogated, that somehow or other this
> set could be preserved and, of course unknown to me, it was. They continued

> using it but not until after about a week or so - their nerves were a bit
> shaken. But they used it for some months afterwards until the big moves came
> and it was a successful source of morale lifter.
> During the trial, that was when the shock came to me when this transmitter
> was brought out by the prosecution as evidence that we had been using a
> receiver, but the Court accepted it. It was never mentioned after that
> because had it been, I don't think either of us would have been alive,
> because we had planned to get some crystals from the Philippines and try and
> fit them in this set then we could call them on CW and give them some news
> about ourselves. But we did get some news by other means, via an agent
> taking a sandalwood vessel across, that the British and Australian
> authorities knew where we were, and it was proved at the end of the war that
> they knew exactly where to come for us. They had guerilla parties in behind
> the lines, but they couldn't contact us and they had to watch some of our
> people just die virtually, because they were there and there would have been
> trouble otherwise.
> BJ: Could I just take you back and ask you to fill in a few details about
> the transmitter. You talked a lot about the construction of the receiver and
> I would be very interested to know where the transmitter fitted in to this;
> were you developing that alongside?"
> RGW: "No, the receiver first; we had that, and then we started the
> transmitter as a rather low priority of course, but one it would be nice to
> have. I had finished the two 6L6G's to make a push-pull amplifier that was
> the RF output to be, and the oscillator, and we had the capacitor but were
> missing a few more components andthat was about where we were. In other
> words, in the course of events, had he been an expert with some sort of
> knowledge of electrical engineering, we would never have got away with two
> 6L6's sitting up on a block of wood with a few capacitors and things hanging
> on them, but obviously the Court Martial officers were normal, without
> disrespect to Infantry Officers, and they had no knowledge of
> telecommunications.
> BJ: Again, the valves you used in the receiver were...?
> RGW: Only one, that's all we had, which was brought in by Mr Mabey. He
> smuggled in a pipe to me, a smoking pipe, with some tobacco. Lovely
> gentleman. Unfortunately, I never had long with him, he died soon after
> being arrested. His widow lived at Hove with her sister; the two are

Flames directed to me personally...PLEASE...I can handle them. CNN.com has a question posted just for today on their website and I challange everyone to please vote on this issue. It is concerning existing gun laws and if there needs to be more. As you know, CNN tends to lean in one direction. Right now, the balance on this vote seems to be leaning far left. Folks, if they take away our guns...what about our frequencys? Thank you for the bandwidth! John

Source record: 66675

I'm not quite sure if there is a correlation between gun control and taking away our frequencies, aside from the general issue of government control.

I work for a company that manufactures security cameras and survelliance systems. At our company meeting this week, we were presented with some of the reasons the future looked good for the industry.
The first was an increase in crime. No big news there. The second reason was the American public's willingness to give up a lot more privacy for safety. There's a dangerous undercurrent here. Americans are willing to give up their Constitutional right to own guns for a relatively small amount of increased safety, and also willing to give up their privacy for a relatively small amount of increased safety.

As for CNN, I doubt wheather they'd show a favorable pro-gun poll if it came to that. I don't trust the media.

Source record: 66676

I read in Clinton DeSoto's book _200 Meters & Down_ an account of a young man somewhere in West Virginia I believe, who was very poor and completely fabricated a receiver and transmitter from scratch, including making his own tubes. Does anyone know anymore about this, or is it just a good story? I can't imagine how anyone could make their own tubes without the aid of a vacuum pump, and if you were well-off enough to have one of those, why not just buy tubes?

Several months ago I ran this and just came across an interested party reply just a few days ago buried in a filtered email directory. Answered him back, albeit 2 months late, but no reply.
If that person or any other is interested in the older style National speaker with rounded corners and emblem in the center and has the larger Hammarlund "new style" S-200 to trade, please get in contact.
I have two of these speakers and only need one.
Thanks

Hi all;

Looking for both/either Drake MS-4 Speaker and Drake AC-4 power
supply.

Power supply must be operational, cosmetics not very important.

Speaker must have proper Drake decal on front, and not be dented.
Otherwise I'm flexible.

Please contact:

Neil, N1DMA
NeilR@innermedia.com

or call toll free: 800-962-2949

Thanks!!!

Hi Joe,

I've go an SWAN 700CX ....uses 8950 .....too hard to find, 6LB6's are the same tube only 6.3 volt fil, 8950 are 12.6v. (you must rewire the filament connections for the new tubes ..)
I've been using the 6LB6's for years ...there working great ....anyway .....FYI ....73...

Source record: 66688

Would like to buy an HQ-180AC or HQ-180C in excellent cosmetic and electrical condition. I thought I would try here first, before going to EBAY and paying a fortune. If you have one and would like to part with it and don't want to charge an EBAY price please let me know. Pictures would be great, because I bought an HQ-180C here recently (no picture just the seller's description) and was told it was in excellent condition with the original knobs and that was not the case.
73,
Jack

You are probably getting no replies for two reasons. Firstly you are asking in the wrong place - its unlikely that a US-based ng will know much about a piece of UK equipment - try asking in UK groups - particularly the uk vintage radio list (details on request). I can suggest an excellent article in Radio Bygones for instance. You will probably find someone who can supply a copy of the manual - though I don't have one myself.

Secondly, anyone suggesting modifying any classic Rx, such as the CR100, is liable to get ignored, as the days of modifying things like this "to make them better" are for most of us long forgotten. This is a piece of history you have - not a pile of bits to be messed with! You will find that if you return it to its original working state - perfectly feasible - then you will have a reasonably good receiver that will give quite pleasing performance on the lower HF bands. It will not be brilliant on SSB - but then it was never designed to be.

You will also find that a fully restored CR100 has some value - and you can sell it or swop it for something else, should you wish to do so at some future date. Modifications will only reduce its value these days - regardless of how clever they may be, or how much the performance has been improved.

Message-ID: <20000513225254.10702.00002953@ng-fy1.aol.com>
Source record: 66597

National SW-3 using the 32 and 33 tubes....this rig is clean and works well. It does have a few items to note....a "!@#$#@!#$" put a heaphone jack in the lower right corner of the rig (removed). I carefully filled it and texture painted the patch job, which matches the original texture paint very well....The repair job is virtually not visible as pictures show. One of the coil sockets was cracked...just a bit and was repaired. An original National coil set for 80 meters is included with the rig. Also, I believe I have 4 empty coil forms, maybe 6..... made by a fellow in IN....from Delrin...that will go with the set for your winding pleasure. These are very nice quality coil forms. This is really a neat radio. The best regen out there....(my opinion) Unfortunately the doghouse power supply does not come with the set. I used it with a little hombrew power supply that I wish to keep. Selling Price for the above $400 Prefer pickup, but will ship. Shipping is additional. Digital photo can be supplied.

Thanks,
Chris

Source record: 66599

SBE-34....This is a compact travel transciever, solid state, except for the driver and finals. It works, but could use an alignment. The service manual an operating manual come with the rig....The original SBE mic does too...this rig also has a Collins 2.1khz filter in it as originally supplied. The radio is clean and in good condition...it does not appear to have been in a smoking enviroment....I dont smoke...so none of these rigs have been exposed while they have been staying here in the shack :-) This rig is also capable of 12 VDC operation, though I have not tested that feature. Price: $225 Shipping addtional. Digital photo can be supplied.

Thanks,
Chris

2145. Re: Question: Innovation in Amateur Radio

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-14 00:00:00 UTC
From: wd1v@amsat.org
Message-ID: <wd1v-1405000615580001@wdonev.ne.mediaone.net>
Source record: 66607
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc,rec.radio.amateur.digital.misc,rec.radio.amateur.homebrew,rec.radio.amateur.space,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.dx,rec.radio.amateur.antenna

The first amateur was Marconi in the history books but you
might want to check out Braun, Tesla, and a few others.

"Marconi shared his Nobel prize with German physicist Karl Ferdinand Braun, b. June 6,
1850, d.Apr. 20, 1918, in 1909 Nobel Prize for physics with
Guglielmo Marconi for his work in developing the radio.

Braun, who spent his career as a professor of physics at
German universities, increased the range of Marconi's
transmitter, invented the crystal rectifier (a device that
allows current to flow in only one direction, and improves
radio transmission), and later invented the oscilloscope, a
cathode-ray-tube laboratory device that was the forerunner of
today's television and radar tubes."

Source: The New Grolier Multimedia Encyclopedia

Another great innovation that hams brought to the party
was helping people in times of distress - for FREE! Ironic
that a group of people known for "intense thrift" would give away
life saving services at their own costs - sometimes putting their
own lives at great risk too - and expect nothing in return!

Good luck with your thesis - please post it when done so we
can all enjoy it.

73!

I suggest buying a tube tester. Radio shack used to have them, but no more. Every drug store use to have them. Why, I remember... Wow, I'm only 40 and I sound like an old buzzard already. They are pretty cheap and readily available at hamfests (at least near Pittsburgh). I use mine all the time. Good Luck! Reply by direct email by removing nojunk from my address...

Thanks,

Brian

> to know why.
> Then again using some palm oil and some bee wire which was in fairly
> plentiful supply, which we stole - it was a bit risky because the Japanese
> were cultivating a couple of beehives outside the wire and of course this
> wire used to disappear for various things unrelated to radio - and we put
> the palm oil along the wire stretched out and rubbed this palm oil on it,
> thickening it with a little bit of flour and then heating it; the flour
> bound the palm oil together and formed a fairly good insulation over the
> wire. Good, but lucky, and with a lot of travelling.
> I should come back to the capacitors on that, because we had to insulate the
> layers of those which we did by putting a layer of newspaper (a few people
> had newspaper and various things, for other reasons than newspaper of
> course, but then we had no other toilet requisites in the party) and by
> soaking this in some coconut oil we could insulate each layer after we wound
> it, and with a piece of this bee wire - we had something like fifty feet of
> it - wound round this part of the fish plate, we made a fairly good choke
> coil. And then a bigger capacitor, which was no trouble, having had success
> with the small one, to just wrap as much tin foil as we could round another
> sheet of newspaper which finished up about 18 inches long by about three
> quarters of an inch in diameter. We didn't even try to measure the
> capacitance of it, because we couldn't do anything about it anyway, except
> put more wire on. And that in effect was a fairly good rectifier, a very
> dangerous one because we had the
> 110 all right but we had a bit over that by the time we had rectified it,
> and we don't know because we had no means of measuring it.
> Finally, the valve; we joined the valve by winding the clean little bee wire
> around it and then plugging it with any insulating material we could get to
> make it stick, - no valve holder, of course. So eventually we produced a
> receiver of sorts, except it wouldn't oscillate. We tried building more,
> another choke coil, and this went on for ages; there was no possibility we
> could get this valve to oscillate. I think it's recommended according to a
> friend of mine who had an amateur licence, he thought that about 120 volts
> was the best we could get and there was no way we could get that by trying
> to smooth this any more. So the only avenue open was to bribe one Chinese
> working at the power station who was very much our way, and of course in
> those days was a nationalist Chinese. The capital of China in those days was
> Chungking, and I told him we could get him some overseas news from Chungking
> if he would slowly wind his field coil power up on the generator every night
> starting at about 9 o'clock bit by bit, and get it up to about 130 on his
> meter. He understood, and after that I said half an hour to drop it again,

> very quietly and slowly because it may affect the lights "....and you no
> speak about that because you get chopped, you know, and we will give you
> Chungking news...." This was duly done and for about six months we had
> reliable communication. The first trial on air had too much hum, and we had
> to modify a few things two or three times in attempts to get it right, and
> in the end we had a workable situation which was worth exploring.
> Capacitors right, choke coils right, one head phone, we had some old rag so
> we tied it round the head and tied it on, or string, or whatever we could
> get. With the hope of recording something we took some paper, which wasn't
> in plentiful supply, but the odd piece of paper we could get. Running
> notches down the left hand side, about a quarter to a half inch apart down
> the paper, and bending it over so that these little pieces stuck up in the
> air, and in the pitch darkness one could then put the headphones over one's
> head with eyes looking out for possible interruption by the Japanese - we
> had some lookouts, or cockatoos as the Australians called them, around the
> place to warn us at the oncoming of the Japanese - and with great
> trepidation we heard Big Ben chiming one night. Of course only one of us
> heard it but we were so full of enthusiasm. It was the BBC all right; it was
> quite a clear signal but it was somebody talking about growing hops in Kent.
> This broadcast went on for something like three quarters of an hour without
> any interruption, but ultimately the signal faded out and I was very
> annoyed. I was asked the next morning by my senior officer what was the
> news, and I said "we've got good news; I can't talk here, come this way." So
> he came along and said "what's this news you're talking about." I said I
> didn't actually hear any news, and he became very annoyed with me and said
> what the hell did I mean, and I said "if the British primary producing
> experts are capable and able to spare the time to talk about growing hops in
> Kent, Britain must still be alive and floating with their thumbs up, and as
> far as I'm concerned that's the best news I could hear!"
> That's the outline and maybe there are some questions I haven't covered
> properly.
> BJ: The first question I would like to ask you is: What did you have in the
> way of tools, if any, and how did you connect the components of the wireless
> without, presumably, a soldering iron?
> RGW: No soldering iron, no solder of course, and no other system really
> available but to twist and wrap with some coconut oil paper, or cardboard or
> something, and very gently lift it. It was on a platen of wood we obtained
> somewhere; it was about a foot by a foot or something, so we just mounted
> the components on that. A meat skewer on the capacitor - oh, we had a
> capacitor too, a capacitor, a valve and a headphone, which were external to
> camp components we had. We didn't have any tools at all, except someone
> obtained the use of a sledge hammer - for what purpose I don't know because
> one of those would not be needed to escape; other than cutting up the soft
> iron of the fish plate which was about the only reason we needed anything,
> the rest were just twisted wires. We just wanted to get one usable because
> we didn't know whether it might be blown up or captured; we weren't worried,
> the main thing was initially a short term aim (as well as a long term aim)

Subject: First-hand account: POW Radio

I read in Clinton DeSoto's book _200 Meters & Down_ an account of a
young man somewhere in West Virginia I believe, who was very poor and
completely fabricated a receiver and transmitter from scratch, including
making his own tubes. Does anyone know anymore about this, or is it just
a good story? I can't imagine how anyone could make their own tubes
without the aid of a vacuum pump, and if you were well-off enough to
have one of those, why not just buy tubes?

From: tubepwr813@aol.com (TubePwr813)
Subject: FS: National SW-3

National SW-3 using the 32 and 33 tubes....this rig is clean and works well. It does have a few items to note....a "!@#$#@!#$" put a heaphone jack in the lower right corner of the rig (removed). I carefully filled it and texture painted the patch job, which matches the original texture paint very well....The repair job is virtually not visible as pictures show. One of the coil sockets was cracked...just a bit and was repaired. An original National coil set for 80 meters is included with the rig. Also, I believe I have 4

empty coil forms, maybe 6..... made by a fellow in IN....from Delrin...that will go with the set for your winding pleasure. These are very nice quality coil forms. This is really a neat radio. The best regen out there....(my opinion) Unfortunately the doghouse power supply does not come with the set. I used it with a little hombrew power supply that I wish to keep. Selling Price for the above $400 Prefer pickup, but will ship. Shipping is additional. Digital photo can be supplied.

Thanks,
Chris

Bismarck Wichy (wd0hco@ev1.net) wrote:
: Have a good response for you... basically Nuvistor development would have
: continued. During the 60's, there was all sorts of interesting research
: going on in making smaller and smaller tubes. Those of us around know that
: many companies made small battery powered AM and FM tube radio sets.
:
: The end of tubes was caused by (1) the fact that transistors could be
: produced cheaper and faster and (2) they would withstand greater shock than
: glass or metal tubes.
:
: And so tube development and research stopped and the solid state era
: began...
:

There were a number of reasons that solid state devices overcame tubes,
but that process is still incomplete. The CRT still dominates the
TV and computer video market and we are well into 50 years of solid
state devices.

The early value of transistors was low power. Case in point was the
first general commercial use of transistors: hearing aids.

However, the value of solid state devices soared with the introduction of
monolythic integration (integrated circuits). Our computational
devices were doomed to be slow and stupid regardless of how complex
a transistor or tube circuit could be built. The propogation delays
of discrete components in a circuit that has 25,000 active elements
completely obviates the value of such complexity due to the sluggish
transit of electrons from element to element. Without the development
of the transistor, which largely lead to the developement of the IC,
we would be stuck in our ability to compute. The computers have
been our enabling tools for so many other advances, that the
technological revolution of the past 25 years would have been
just a lazy stroll in the sun.

Subject: NCX-500 info Wanted

Hi,

Just got a complete NCX-500 xcvr with its ps at a flea today for the
princely tab of $20. No manual, though. Uses pair of 6JB6 in the PA.

Need info on where to look for a manual, or will go to W7FG for a
copy to make do with. Looks like it'll work. Been in a barn for many
years, dusty, but it's all there, original knobs too.

Can someone point me in the right direction?

I'm not quite sure if there is a correlation between gun control and taking
away our frequencies, aside from the general issue of government control.

I work for a company that manufactures security cameras and survelliance
systems. At our company meeting this week, we were presented with some of
the reasons the future looked good for the industry.
The first was an increase in crime. No big news there. The second reason
was the American public's willingness to give up a lot more privacy for
safety. There's a dangerous undercurrent here. Americans are willing to
give up their Constitutional right to own guns for a relatively small amount
of increased safety, and also willing to give up their privacy for a
relatively small amount of increased safety.

As for CNN, I doubt wheather they'd show a favorable pro-gun poll if it came
to that. I don't trust the media.

Wasn't the American Revolution fought to eliminate the 'King' and Big Government?

Wasn't the Battle of Lexington and Concord fought to prevent the government from seizing colonials' guns?

As a side note: Smith and Wesson is now a British Company and they are still trying to disarm the US.!!

Do we not want to be a free people?

President Kennedy of Blessed Memory is quoted as saying to the effect: "Everytime one law is passed someone loses some freedom!"

Today we want a King and Big Government. Let's revert to the 1775 government system!!

The gun issue is easily solved. A constitutional amendment approved by 37 states will rewrite the 2nd amendment so the the right "...may be infringed..." [we already have 20,000 laws that 'do not infringe' <satirically stated>].

But seriously, if the US wants to restrict gun ownership simply revise the constitution! The Founding Fathers provided a means to do so and these means have been frequently used.

Finally, WHAT HAS THIS TO DO WITH HAM RADIO?????

>Folks, if they take away our guns...what about our frequencys?<

Moot - we lost our ability to protect ourselves with weapons from a tyrranical gov't long ago, or we'd have even better things like the fouders would have thought wise. The only reason people still have any guns, is that they have control of our minds.

Subject: What If .. No xsistors

In school, in an analog ckt analysis class, our professor pointed out that
the first analog tube computer's results were instantaeous (as he would say
"for all practical purposes") compared to today's fastest digital computers.
O'scopes were used for viewing the results of an integration or differential
by using different types of amplifiers.

He and I were taking a smoke break once and were talking about how things
would be different if digital computers never took off like they did.

He pointed out that, just because something is widely used doesn't meant it
is the best way...

Maybe most computer designers are like me; hated doing calculus and would
rather deal with logic circuits
-Dave

I remember dismantling an old bombsight computer in the late 50s...
We have a very nice old tidal computer near here*, uses pulleys and
string (or rather wire)! It produced tide tables until quite recently.

* Actually at Bidston Observatory on the Wirral Peninsula, across the
river from Liverpool, UK.

I thought about FEDs as a possibility, but have rejected it for now. I even
thought about micromachines as a possibility without semiconductors. In
both cases the physics of semiconductor materials is too important for
operation. Perhaps some microfluid designs would have been developed.
Another possibility is a vacuum IC. That is, a large number of small
components in a vacuum chamber. It is interesting how the success of
current optical systems hing on semiconductors right now.

Subject: where can you test a tube these days

I'm returning to the hobby after a 20 year hiatus and need to test
some tubes in my old equipment. Used to - I could go down to the
local RadioShack and they had a tube tester anyone could use.

What is available today?

Thanks

Would like to buy an HQ-180AC or HQ-180C in excellent cosmetic and electrical condition. I thought I would try here first, before going to EBAY and paying a fortune. If you have one and would like to part with it and don't want to charge an EBAY price please let me know. Pictures would be great, because I bought an HQ-180C here recently (no picture just the seller's description) and was told it was in excellent condition with the original knobs and that was not the case.

From: "D. S. Platt" <jeepp@erols.com>
Subject: WTT HP Dig. scope for TEK

I have a virtually NIB condition HP 54600A 2-channel, 100MHz digital scope. This is the one with the all the automatic measurement cursors, etc. It comes with the accessory pouch, probe set, operating and maintenance manual, programming manual, floppy disk, and 2 HP 54658A Measurement/Storage modules that mount on the rear of the unit. I'll even add a serial cable. I'm looking to trade this digital unit for several older analog units (I'm from the old school). I'll accept offers of TEK 465B's and 475A's in trade. Minimum would be 2 465A's and one 475A. Ex-military 465's are not acceptable. Trades must be in similar condition, but don't have to be in cal. As always, I'm open to dialog (hi). I can scan and email the HP catalog page if someone doesn't know the unit, already.

Still looking for the elusive Hallicrafters HT-20 and HT32A/SX-101A combo.

Thanks for the read. de K3HVG

I have a TR-75 TV that is operational and looks real good. If I can borrow a digital camera, I'll try to get some pics - remind me and I'll send them to those that request them. (Be patient!) I also have the earlier TR-75 (no cover, all "surplus" parts). This was my dad's first transmitter and I rebuilt it when I was a Novice in 1974. It has more "character" than the covered-up 'TV version! I would like to find the matching modulator that was available - MD-40, I believe. Any leads? Otherwise , I'll homebrew one.

I gave mine away in '63 when I joined the Navy. Before that, after getting nailed a couple of time by the B+ when changing bands. It had a series tuned link coupled final tank with plug in coils. I converted the output to Pi-network and built a 12AX7 - 12AU7- with a pair of 2E26's as a modulator with a power supply into the space where the PA tuned circuit had been located. It worked quite well.

Hmmm...dont' know about that one. If I was running Drake I would not resume manufacturing amateur equipment just because a bunch of hams signed a petition. Like it or not, Drake is in business to make a profit, just like any other business. I guess the question is, can Drake compete with such companies as ICOM, Kenwood and the like. I too would like to see them start back into making amateur radio products, but I don't think I would invest my life savings in their stock if they did. That market is not very large and is very competitive right now.

That's just my 2 cents worth.

Sounds like it is a marketting tool to gauge how much interest there is in resuming production. Can't blame them for that! Jim W7LS

Kevin:

More Re: Marconi the amateur.

I have in front of me here a hard cover book "The wireless experimenter's manual", by Elmer E. Bucher, Wireless Press, Inc. 1920, LCCN 20-5750, LC Call Number TK9946.B85. In the back of the book is a tear out page which is an application form to join "The National Amateur Wireless Association", the fee for joining is $2.50. The address for the Association is given as 326 Broadway, Room 301, New York.

The head of this Amateur Association is listed as: Gugliemo Marconi, President
There is a National Advisory Board of Vice Presidents listed, which includes: Prof. Arthur E. Kennely, Harvard, Prof. Alfred N. Goldsmith, College of the City of New York, etc...

The text on the application reads... "Join Now" You should be a member of the organization that is doing real things for the advancement of amateur radio. etc.... I could make a xerox copy of the application form and fax it to you if you wish.

In recent years we have such "amateurs" as...

Phil Karn KA9Q...

who almost single handedly introduced the Internet's TCP/IP protocol suite to the modern personal computer [IBM clones as opposed to the Unix based computers] by the release of his "KA9Q" TCP/IP "stack" as free ware. Many professional programmers had said that the base PC with the 8086 microcomputer and 640 K of memory could never support such a complicated communications stack and that only powerful Unix machines could do that! Well... Phil did it anyway and then...

This KA9Q "stack" was picked up and modified by many commercial interests and led to the exponential growth of TCP/IP on the PC platform, and made a very large contribution to the commercial growth of the Internet.

<wd1v@amsat.org> wrote:
>The first amateur was Marconi

I'd think he fall into the "professional" catagory rather than
the "amateur" catagory. He had visions of $$$ in mind all the
while he was perfecting his apparatus. Note that his equipment
contained nothing original -- he utilized ideas and devices of
the legions of inventors who came before him. (For example, in
Blake's HISTORY OF RADIO TELEGRAPHY AND TELEPHONY, an encyclopeadia
of early wireless circuits, Marconi's apparatus isn't presented
until page 100 -- 99 pages of circuits and their descriptions
come before him.) We can thank him for putting all the pieces
together into a workable system.

Next set of cleaning out. The following are pulls, not tested, not boxed.

These are octal based power pentodes:

2 each of 17DQ6
1 each of 12DQ6
1 each of 12BQ6GTB/6CU6
3 each of 6BQ6
2 each of 7591

Make an offer if you want them. Add $5 for me to ship them.

Save them from the dump.

That's the last of the octals to be rid of. :-(

Thanks.

Steve.

2169. FS: Tubes!

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-14 00:00:00 UTC
From: JAMES MCSHANE <jimmcshane@prodigy.net>
Message-ID: <8fni2vrcs1@newssvr04-int.news.prodigy.com>
Source record: 66631

While I deal primarily with audio tubes, from time to time I get some of interest to this group (I hope!). Here's a listing of some:

(1) 2C39 GE JAN original box and packing, $29.50

(3) 2E22 Ken-Rad JAN, very nice tubes in the original JAN boxes $24.50 ea.

(13) new GL-2E24 RCA, GE $5.00 ea., or 2 for $9.50

(3) 2E26 RCA $4.50 ea.

(3) 4-125A/4D21, 2 are Eimac, one is a GE. All appear new. I have no way to test them (I'm not a Ham), but I'll gladly return your money if you aren't satisfied. I also have one new socket for these tubes which I'll toss in. $69.00 ea.

(10) 6AZ8, new US made tubes, $5.00 ea.

(10) 6CL6, good US brands, new tubes, $4.75 ea.

(6) 6JE6C/6LQ6 various US made brands, all new tubes, $36.50 ea. Some excellent used on hand for $18.50 ea.

(6) 17JB6A, NOS GE and other US brands, $7.50 ea.

(2) 811A RCA, original boxes, wrapping, guarantee sheets, these are the original 811 tubes with a top plate cap, not subs for the Svetlana SV811 series. These are hard to find, PRICE CUT! Now $22.50 ea.

(4) 816 RCA, new tubes, white boxes, $15.00 ea.

(1) 866A Nat'l Union, new tube in original box, $14.00

(2) 866AX Amperex, original boxes, new tubes, $14.50 ea.

(2) 5516 Hytron, test/look new, but I can't be 100% sure, $9.75 ea.

(4) 5516 Hytron, used, test very strong, $5.50 ea.

(6) 5763 RCA power pentodes, $7.50 ea. Good used for $3.50 ea.

(2) 5823 RCA gas triodes, $9.50 ea.

(17) 6146B/8298A GE, all but two in their original GE boxes, $22.50 ea., $45.50 per pair while they last.

(2) RCA 6146B, new tubes in white boxes, $25.50 ea.

(2) RCA 6146B, very lightly used or new, can't tell, in white boxes, $19.50 ea.

(2) Sylvania 6146B, branded International in Int'l boxes, new tubes, $21.00 ea.

(2) Sylvania 6146B matched pairs, new in original boxes, $42.50 per pair.

(1) 7061 GE beam power tube, $2.50

(1) 7551 ECG beam power tube, $6.50 (a few good used for $2.75 ea.)

(1) 7695 GE power tube, $3.50

(10) 7984 GE, all new in the original boxes, $9.50 ea.

(6) new 8068 GE beam pentode pass tubes, octal base w/plate cap, 6.3 volt heaters, 35 watt plate dissipation, all new in original boxes, $44.50 ea.

(25) 8106 GE, cool little pentode for mobile radio, $9.75 ea.

Drop me an e-mail if anything looks useful. Thanks much!

If anyone can help, I Have a pair of National air-variable capacitors
that I am trying to identify the values of.

The first one is marked: National Type DX

The 2nd one is marked : National 200D

If anyone can give me a clue on what the values of these might be,
I would greatly appreciate it.

You can email me here or : fjsole@cc.ysu.edu

Thanks,

-Fred Sole WB8LVP

Source record: 66691

Hi,

Just got a complete NCX-500 xcvr with its ps at a flea today for the princely tab of $20. No manual, though. Uses pair of 6JB6 in the PA.

Need info on where to look for a manual, or will go to W7FG for a copy to make do with. Looks like it'll work. Been in a barn for many years, dusty, but it's all there, original knobs too.

Can someone point me in the right direction?

73,

Wasn't the American Revolution fought to eliminate the 'King' and Big Government?

Wasn't the Battle of Lexington and Concord fought to prevent the government from seizing colonials' guns?

As a side note: Smith and Wesson is now a British Company and they are still trying to disarm the US.!!

Do we not want to be a free people?

President Kennedy of Blessed Memory is quoted as saying to the effect: "Everytime one law is passed someone loses some freedom!"

Today we want a King and Big Government. Let's revert to the 1775 government system!!

The gun issue is easily solved. A constitutional amendment approved by 37 states will rewrite the 2nd amendment so the the right "...may be infringed..." [we already have 20,000 laws that 'do not infringe' <satirically stated>].

But seriously, if the US wants to restrict gun ownership simply revise the constitution! The Founding Fathers provided a means to do so and these means have been frequently used.

Finally, WHAT HAS THIS TO DO WITH HAM RADIO?????

Mark Bell wrote:

Subject: 6LQ6 Tubes Wanted

My Swan 260 also uses a 6LQ6/ 6JE6, which melted down. The problem is spending
$60 or so to fix up an old mediocre rig. Barry, is your definition of "living on edge"
refer to a not so
robust output stage? The worst part is that I had tons of these horizontal output tubes in
my old
tv repair days.

From: yardleyite@aol.com (Yardleyite)
Subject: Clegg Venus 6M SSB Station For Sale:

I have a complete Clegg Venus 6M SSB station including the SS-Booster speech
processor, and power supply/speaker combo, and the original Clegg torquoise
hand microphone. Everything is in excellent condition, the radio puts out
around 50 watts from a single 12V version of a 6146B (just replaced).
The original Eddystone dial works great and the receive sensitivity is fine.
This radio uses Nuivistors in it's front end. AM and CW operation are also
good.
The paint is a little faded on top of the radio and power supply. Otherwise
everything is excellent. I have a copy of the manual for the radio and the
SS-Booster. I have all of the interconnecting cables as well.

I'd prefer not to list this on ebay. The last one I saw there fetched over
$500.00 for the radio alone without a power supply or the SS-Booster speech
processor or mike. I'm asking $600.00 plus shipping for the whole station.

If you want to catch some of the terrific E-skip this season on SSB/CW or want to work AM on 50.400 with broadcast quality audio - here's a chance to do it with something other than a Yaecomwoods out of the box radio. It's probably one of the rarest Clegg's made that you can still operate every day.

I recently upgraded my license and prefer to concentrate my operate time on the lower bands.

Thanks for reading this message and 73.
Joe

Subject: Have you signed it yet?

I don't think that I will be signing the Drake petition.

Please consider Drake's latest attempt at marketing a Ham Radio: the $600 2-Meter rig. Wonder how much Drake lost on that one. With this track record, I would imagine that an HF rig would retail for about three to four thousand dollars. The Drake-lovers would sure have to dig-deep for that one!

How can an American manufacturer compete with Icom et al? Consider the 706MKII with DSP being closed out now for 800-900 dollars.

I think that Drake is smart enough that the hams could never support their

operation. The SWL's seemed to have
propped up the Company for awhile.
I'm not sure if that is still happening.

Look at Drake's latest SWL offering:
the "repackaged" SW-8 sold by Grundig.
Imagine how betrayed the folks that
shelled out 800 smackers for the SW-8
feel now that Grundig is selling the
same radio for 2-3 hundred dollars less!

I think that before Drake re-enters
the ham arena.....they need to go
back to Marketing-101.

WB9GKZ wrote:

> I would imagine that an HF rig would
> retail for about three to four thousand

Well...have you priced FT-1000D's or
IC-781's recently? (not to mention
Signal One Mil/Spec 1030c's) ;-).
My contention is that a properly marketed
xcvr version of the R-8A (TR-8A?) that
hit a price point close to that of the Omni VI+
and incorporated the same type of feature set:
DSP, multiple IF filter selection, full RS-232
control, full QSK, separate RX ant switching, etc.
could have the potential to be a bigger 'hit' for
them than many might imagine.
I love my TR-7A (and my 'B-line' and my
TR-4Cw/rit etc.) but folks who are serious
about contesting these days are not willing to
forgo computerized rig control.
That being said, the sheer volume of things
showing up on eBay being auctioned off to
'benefit' the Drake ARC (coupled with the
decision to stop servicing the -7 line gear a
while back) does not do a lot to engender
'warm and fuzzy' feelings about R.L. Drake Co.'s
future corporate direction re: the Amateur
Radio Service.

A petition is not going to do it. You might get them to do it, if you promise to pay more, than Japanese gear, for less features, and older technology.

Date: Wed, 10 May 2000 01:16:09 GMT
From: JGinNY
Subject: Pls explain -- eliminating hum in speech amp?

An old ARRL Hints & Kinks book includes a tip on getting rid of
speech-amp hum.

Basically, it involves putting a 10 to 12 volt + bias on the filament
circuit. The bias voltage is obtained by connecting 2 series resistors
(as a voltage divider) between the plate supply and ground. This low +
bias is tapped off the voltage divider at the juction of the 2
resistors, and then goes to the filament supply for the speech amp.

The article advises that this will do away with the hum, *but that the
filament(s) must not be grounded on one side. (Neither should the
center tap of the filament winding be grounded.)

Question is:
If this +10-12 volt bias is placed on the filament supply, how does that
reduce or eliminate hum in a speech amp?
The wave shape of the AC component on the filament remains the same,
does it not? It's just being bumped up by +10 volts throughout its
cycle. How would that alone be effective in getting rid of hum?

And -- isn't one side of a rig's filament supply grounded, typically?
How, then, could one successfully apply the aforementioned scheme?

Finally, one other point: The article recommends using a "filament
bias" value of +10-12 volts, as mentioned above. However, it doesn't
specify whether this is intended for 6.3 or 12 volt filaments. Would it
matter? Would the same value of bias work for either?

many thanks,
N1AEP

From: "Bob"
Subject: Pls explain -- eliminating hum in speech amp?

The rationale for that hint is that some tubes have heater-to-cathode
leakage that causes hum in the amplifier. Raising the heater potential
reverse biases the parasitic diode that the heater and cathode create, and
prevents current.

The whole thing is rather worthless actually. If you have hum from that
cause, you need to replace the tubes with good ones that don't have
heater-cathode leakage.

The amount of potential required is such that, even on the peaks of the
heater supply, the diode never gets forward biased. So the value given
applies to 6.3 Volt systems.

In general, if you have hum, the way to eliminate it is first to find the
cause, then take measures to eliminate it. The scheme above only works if
that's the source of the hum.

Subject: What If .. No xsistors

Sitting around last night, an odd thought popped in my head (fairly
normal occurence)-
Where would we be if transistors had never been invented (and therefore
none of their progeny (ic, etc.) had ever been developed).

Imagine here we are, in May, 2000 with 40 more years of vacuum tube
development under our belts. Would radios be significantly different
than they were in 1960? Had tubes hit a plateau in development by that
time? Was there anywhere else to go? Seems like we were seeing
multiple uses stuffed in one glass envelope, would that have continued
and grown, until we had something akin to large scale integration with
vacuum tube devices?

Any ideas?

Dave Ragsdale

2178. Identify These Tubes

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-15 00:00:00 UTC
From: flderoos@mmm.com
Message-ID: <3920377E.58CC@mmm.com>
Source record: 66545

Does anyone have the base diagram and specifications of either a 13E1 or an HL10? Both tubes are from the 1960s. The 13E1 is a tetrode and I think the HL10 is a half wave rectifier.

Thanks,

Fred

That might be stretching it. I think MIT's PCIP predated the KA9Q software,
and probably had a larger base of commercial derivatives before CPU speeds
outgrew them.

But look at RFC 1122 for references to the "Karn algorithm" for computing
more accurate round trip time estimates for TCP. I think there is an
ACM SIGCOMM paper referred to in there. I'm pretty sure this came out of
the work with amateur radio TCP/IP (a lot of the really good, fundamental
insights into TCP protocol dynamics in the 1980's came from the experience
of running TCP over the really crappy networks that existed then).

Maybe I can help you on some of this. I have a Heath Sixer and
Twoer.

As you have already noticed, there were two versions of
the Sixer. The HW-29 and the HW-29A. The HW-29 was only produced
for one year, 1960, whereas the HW-29A was produced from 1961
to 1971. The main difference between the two is the type of
crystals that they used. The HW-29 was designed to operate with
50 MHz overtone crystals, but at the time, these were pretty
expensive. So Heath redesigned the oscillator/multiplier section
to operate from the lower cost crystals in the 8.333 - 9.0 MHz
range. To accomplish this I think that they had to add another
stage.

If you in fact have a HW-29, and not a HW-29A, my guess
is that your modification allows for the best of both worlds.
The unit, without the modification, can use 50 MHz crystals
and with the modification, use 8 MHz crystals. It may have
even been a special mod to allow the use of 12 MHz crystals.

I do have the original HW-29 manual and schematic, if you
are interested. I won't sell the manual or schematic but

I will make a copy for you. Use the email address in my
sig below.

> 2) The radio came with a crystal for 53.72. I can use that
> rock for testing, but I assume that the best freq to put
> the radio on is 50.40, yes?
>

I didn't think that they ran AM that low in frequency. I thought
that they were up around 52.0 MHz. But it's been a while since
I have been on 6 meters.

> 3) Do most AMers use horizontal or vertical polarization?
>

I have always use horizontal for 6 and 2 meters but a vertical
would work just as good. A vertical J-Pole is pretty simple
to make.

Hello All,

Visit my page for items for sale. Will be listing the items in the next 7-10 days on E-Bay. I'm building the list and will be adding photos in the next couple of days. You can view the page at: http://www.jones-clan.com/EBay/

Cleaning out the shack and do so spring cleaning. I will consider any serious bids - if I recieved none, will list it on E-Bay. Will use the funds to upgrade the shack and help out with out ATV Repeater with the school club.

Happy Viewing.

2201. Johnson KW Matchbox and Drake MN-2700 Antenna tuners for sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-15 00:00:00 UTC
From: Chris <ck5@ix.netcom.com>
Message-ID: <3920DCBE.6610@ix.netcom.com>
Source record: 66568
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.equipment

I have a Johnson KW Matchbox with the meter and directional coupler in good working condition and currently on the air. Case and edge trim has been repainted in gray and looks very good. It has a small paint chip on front panel but nothing bad. $325 plus shipping
I also have a Drake MN-2700 antenna tuner that matches the TR7 line. This is also a real workhorse and handles legal limit+. It's in very good condition. $325 plus shipping. 73 Chris VE3NGW/W4 Florida

2202. Need HEATHKIT hand mic/swap Kenwood MC-42s mic or...

> Perhaps some microfluid designs would have been developed.

During the brief popularity of fluidics, Dow Corning made "fluidic IC's" using multiple layers of etched glass which were then fused together into a block. They were rather large, compared to a modern IC, but could have been smaller if contamination of the fluid (air in this case) was carefully controlled.

Subject: 6AX4 tubes. Want them?

Still cleaning up. I am 6 of octal 6AX4 1/2 wave
rectifier/damper tubes along with 2 of 12AX4 and 1 of 17AX4. If

you want them send me email. Add shipping of $3.20 for Priority
Mail in the US. These are pulls, unboxed, untested.

Save them from the dumpster.

Thanks,

Steve.

From: Jim Campbell
Subject: Eldico TR 75 TV5

I gave mine away in '63 when I joined the Navy. Before that, after getting
nailed a couple of time by the B+ when changing bands. It had a series tuned
link coupled final tank with plug in coils. I converted the output to
Pi-network and built a 12AX7 - 12AU7- with a pair of 2E26's as a modulator with
a power supply into the space where the PA tuned circuit had been located. It
worked quite well.

Subject: FS: RCA ACR111 RECEIVER

RCA ACR111 receiver from 1937. Covers broadcast & shortwave. 16 tubes, crystal filter, b.f.o., etc. Recently serviced & works very well. The only thing it needs is that some numbers on the dial are worn off and should be repainted. $250 plus s & h from Schenectady, NY.

LIST OF ITEMS FOR SALE: (revised 5/8/00)
http://www.freeyellow.com/members3/sdstudio/page3.html

Date: Sun, 14 May 2000 19:58:37 -0500
From: "JAMES MCSHANE"
Subject: FS: Tubes!

While I deal primarily with audio tubes, from time to time I get some of interest to this group (I hope!). Here's a listing of some:

(1) 2C39 GE JAN original box and packing, $29.50

(3) 2E22 Ken-Rad JAN, very nice tubes in the original JAN boxes $24.50 ea.

(13) new GL-2E24 RCA, GE $5.00 ea., or 2 for $9.50

(3) 2E26 RCA $4.50 ea.

(3) 4-125A/4D21, 2 are Eimac, one is a GE. All appear new. I have no way to test them (I'm not a Ham), but I'll gladly return your money if you aren't satisfied. I also have one new socket for these tubes which I'll toss in. $69.00 ea.

(10) 6AZ8, new US made tubes, $5.00 ea.

(10) 6CL6, good US brands, new tubes, $4.75 ea.

(6) 6JE6C/6LQ6 various US made brands, all new tubes, $36.50 ea. Some excellent used on hand for $18.50 ea.

(6) 17JB6A, NOS GE and other US brands, $7.50 ea.

(2) 811A RCA, original boxes, wrapping, guarantee sheets, these are the original 811 tubes with a top plate cap, not subs for the Svetlana SV811 series. These are hard to find, PRICE CUT! Now $22.50 ea.

(4) 816 RCA, new tubes, white boxes, $15.00 ea.

(1) 866A Nat'l Union, new tube in original box, $14.00

(2) 866AX Amperex, original boxes, new tubes, $14.50 ea.

(2) 5516 Hytron, test/look new, but I can't be 100% sure, $9.75 ea.

(4) 5516 Hytron, used, test very strong, $5.50 ea.

(6) 5763 RCA power pentodes, $7.50 ea. Good used for $3.50 ea.

(2) 5823 RCA gas triodes, $9.50 ea.

(17) 6146B/8298A GE, all but two in their original GE boxes, $22.50 ea., $45.50 per pair while they last.

(2) RCA 6146B, new tubes in white boxes, $25.50 ea.

(2) RCA 6146B, very lightly used or new, can't tell, in white boxes, $19.50 ea.

(2) Sylvania 6146B, branded International in Int'l boxes, new tubes, $21.00 ea.

(2) Sylvania 6146B matched pairs, new in original boxes, $42.50 per pair.

(1) 7061 GE beam power tube, $2.50

(1) 7551 ECG beam power tube, $6.50 (a few good used for $2.75 ea.)

(1) 7695 GE power tube, $3.50

(10) 7984 GE, all new in the original boxes, $9.50 ea.

(6) new 8068 GE beam pentode pass tubes, octal base w/plate cap, 6.3 volt heaters, 35 watt plate dissipation, all new in original boxes, $44.50 ea.

(25) 8106 GE, cool little pentode for mobile radio, $9.75 ea.

Drop me an e-mail if anything looks useful. Thanks much!

From: novatech@eskimo.com (Steven Swift)
Subject: Octal Power Pentodes. Want them?

Next set of cleaning out. The following are pulls, not tested, not boxed.

These are octal based power pentodes:

2 each of 17DQ6
1 each of 12DQ6
1 each of 12BQ6GTB/6CU6
3 each of 6BQ6
2 each of 7591

Make an offer if you want them. Add $5 for me to ship them.

Save them from the dump.

That's the last of the octals to be rid of. :-(

Thanks.

Steve.

Subject: What's the mystery tube?

The 15E is a VHF/UHF triode. It was used as a pulsed oscillator (single or push-pull) or amplifier in many World War II IFF systems including the BN. It found application in airborne intercept radar transmitters and jammers.

I went to work for IBM as a customer engineer just after their computers
went all solid state, but I used to have some of the plug in modules
from one of the tube type models. Used tons of 12AX7s, but no relays.
Some tube type computers used magnetic core storage.

Hi All,
I have a National NC57 for sale. It has been brought up to par and works well on all bands. The speaker has been replaced as the original was full of holes, but the replacement came from another NC57. It has all of its original knobs and even has its bottom plate. The cabinet could stand to be repainted, but is acceptable. I am asking $120.00 for the set as it is right now. The buyer will pay shipping via UPS or USPS. I have a couple of photos that I can send you if interested. Please email me directly with any questions, etc...
rgds,
Mark S.

I bought a spare tube from someone on this NG about a year ago. Cant recall his e-mail address. The tube is same used in some Hospital Patient EKG monitors. Check Deja News for old postings on this subject. Also under IC781 as they both share same tube. Whats wrong with yours? Mine had cold solder joints on the PC board that I fixed easily. Icom wanted $575 for the whole assembly. The spare tube I am keeping for future in case it really goes or gets badly burned in.

It is an OEM module used for the display, they do not purchase the CRT
tube only. The module has all the high voltage, sweep and deflection
circuits. Likely a tube from a fish finder might do.

Need identification help on a wood case radio, sculpted curved asymmetrical front. Missing circular lighted dial that sits inside the speaker, center of the radio,2 bander?
Small metal tag on bottom front says "Golden Bear", paper tag on top of chassis says "5360". Tube compl. 6J7G,6K7,6H6,6F6,6F5,80.
It has a square p.s. filter cap. Bob Eslinger could not find this in ryders.
Perhaps it is a Canadian made radio? Or Crosley?

Subject: ** FLEA at MIT ** Sunday May 21st Cambridge MA
Summary: Buy Sell SWAP Ham Radio Electronics Computers 9AM - 2PM

This coming Sunday...

*** !!!! In our Traditional GARAGE and lot !!!! ****
so come rain or shine or super heat the Flea is on !!!

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday May 21st 2000
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >2000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

G'Day Fred

The 13E1 tubes were manufactured by STC (Standard Telephone & Cable Co.)
specs as follows:-

Filament 13 Volts @ 2.6 Amperes
Anode Volts 150
Screen Volts 150
Grid Volts -14
Anode Current 500 Milli Amperes
Mutual Conductance 35 (Ma/V)

0
H + + H
Anode + + H tap
G2 + + Grid 1
+
K

If my memory serves me correctly they were used in the 1950's in Voltage regulator
or Modulator circuits of the English manufactured Marconi Black & White TV
transmitters.

Equivalents are:-

C1158 5B/900A CV2377 CV6045 CV8061 7972

Nothing on the HL10

Source record: 66576

I'm in the process of my first refurb, and have a Ranger to work on. I think there use to be long screws that connected the case to the front panel but are missing from my unit. I was wondering if there are any substitutes available? Also, besides the knobs and the hex nuts behind them, what else is involved in removing the front panel? It looks like the red jewels have a hex nut behind them.

Thanks,

Tom K3GM

There is a site on the web that has a bunch of schematics, I know it has the S118 because I got it for my friend a few months ago. Trouble is, I can't find the URL. But I'm sure somebody else will know it. If not, email me and I'll find it for you.

This what I did with my Pacemaker... took front panel to hardware store and found some threaded rod. Also found a "cap nut" which goes on the rod but has a Phillips screw head. You could also use a "castle nut" but it doesn't look original but it's does look pretty good.

Then just cut the rod to size. This is pretty common on Rangers as those rods made it a pain to open the cabinet.

Good luck - WD0HCO

2238. DEMIL Project Update

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-16 00:00:00 UTC
From: mc@REMOVE.sover.net
Message-ID: <392126b8.2040646@news2.sover.net>
Source record: 66579

Hello Everyone:

As many of you know last October I was successful in getting the government agency responsible for disposing of excess military and government equipment to re-examine various pieces of equipment regarding its' disposition. Up until that time the general policy was to "demilitarize" radio and electronic equipment by smashing it with a sledge hammer or otherwise shredding it into scrap metal.

Fortunately I was able to get to some people who are in a position to re-evaluate each piece and to change the DEMIL Coding on each item to DEMIL CODE A (No DEMIL Required). Initially I had submitted the National Stock Numbers (NSNs) for the Collins KWM-2A/30L-1 station known as the FRC-93 and the R-390 and R-390A receivers. Last October I received an official letter from the DRMS that these items had successfully been reclassified as DEMIL Coding A. This letter is posted on the AM WINDOW Web site and is available for viewing.

www.thebizlink.com/am/drms/drms.htm

Not one to let such an excellent opportunity pass I decided to set up a special DEMIL task force to research the NSNs of other equipment and submit these to the DRMS for re-examination. Last November I sent then such a list of items. Recently I received a message from my contact stating that several have been successfully reclassified and the remainder are still in the works.

Here is the text of the latest list of equipment that has been recently reclassified:

The following NSNs are currently coded DEMIL A (Non-Munitions List Item, No Demilitarization Required) in the DoD supply system

5820 00 503 2640 T-368 (T-368/URT Transmitter)
6130 00 034 4239 516F-2 (PP-4151/FRC-93)
6110 00 832 4975 --- (CN-1214/G FRC-93) (voltage regulator)
5965 00 034 4249 MM-1 (M-127/FRC-93)
5965 00 043 0897 MM-2 (Microphone Headset)
5820 00 034 4235 CC-2 (CY-6197/GCC-159)
5820 00 075 3161 CC-3 (Case, Electrical Equipment)
4710 00 930 0400 --- (CN-1146/FRC-93) (voltage regulator)
5985 00 909 1873 637T-2 (Antenna,Transportable)
5820 00 034 4243 351D-2 (Mounting, Mobile)
5820 01 054 9106 --- (AN/FRC-93)
5820 01 052 1438 --- (AN/FRC-93)
5820 01 052 1439 --- (AN/FRC-93)

5820 01 053 5535 --- (AN/FRC-93)
5820 01 052 1440 --- (AN/FRC-93)
5820 01 052 1441 --- (AN/FRC-93)
5820 01 052 1442 --- (AN/FRC-93)

DEMIL coding change recommendations have been made to the applicable DoD Item Managers for the following NSNs (the nature of the change is to make them all DEMIL Code A (Non-Munitions List, No Demilitarization Required):

5820 00 034 4234 30S-1 (AM-4783/GRC-159V)
5820 00 177 2887 51S-1 (no MIL nomenclature)
5820 00 034 4233 MP-1 (PP-4765/GRC-159)
5820 00 566 8373 KWM-2 (RT-718/FRC-93)
5820 00 082 4080 KWM-2A (RT-718/FRC-93)
5895 00 960 8526 136-B2 (F-1139/GRC-159) (noise blanker)
6130 00 985 8171 PM-2 (PP-3990/FRC-93)
5820 00 082 4082 312B-4 (C-6118/FRC-93)
5820 00 034 4241 180S-1 (CU-2004/U)
5820 00 702 2216 312B-5 (C-7515/FRC-93)
5820 00 082 4081 30L-1 (AM-3979/FRC-93)

In the interim, pending review by the Item Managers, we are advising our Defense Reutilization and Marketing Offices to manage these items as DEMIL A (no DEMIL required).

It's easy to determine if any of these items have been reported to any of the disposal offices for processing. Access the DRMS web site:

http://www.drms.com

On the home page, you'll see a selection marked "I Am a Private Company or Individual". Click on this selection.

Click on Property Search (far left and five search methods will be shown). There are some restrictions on searching sensitive items but none of the foregoing stock numbers meet that criterion.

Best search method is the first one on the list SEARCH DRMO SITE. The FSC is the first four digits of the NSN and the NIIN is the remaining 9 digits.

The web site provides information about property currently being offered for sale. It is open to the public.

The DRMS customer service number is 1-888-352-9333 should you have questions about the web site, sales offerings, and the like.

Enjoy!

As I remember Phil Karn introduced TCP/IP for amateur radio at one of
long gone Mid-Atlantic Packet Radio Council meetings.... (the one held
in Savage, MD). I can't put a year on it. But at the time the TNC-2 was
rumored but not yet a reality.

It was an amateur radio adaptation of the existing TCP/IP. Just as AX.25
was
an amateur radio utilization of the existing X.25 transfer protocol.

However, I think Phil did a lot of development for TCP/IP in his job
(memory wants to say that he worked for Bell but I may be wrong)

If I root around in the attic I might be able to find the diskette
he gave out that day.

But going on from here....
While packet radio was what we could call a "reverse" development in
amateur radio, meaning something we adapted, it sure did open the door
for commercial development of mobile data services.

Subject: FS: NATIONAL CRM SCOPE

Very rare National model CRM 1 inch oscilloscope from 1937. It was used to measure AM transmitter modulation. It is in mint condition with all original knobs and no modifications - works very well. In collector condition! $150 plus s & h from Schenectady, NY

LIST OF ITEMS FOR SALE: (revised 5/8/00)
http://www.freeyellow.com/members3/sdstudio/page3.html

Date: 14 May 2000 02:52:54 GMT
From: tubepwr813@aol.com (TubePwr813)
Subject: FS: National SW-3

National SW-3 using the 32 and 33 tubes....this rig is clean and works well. It does have a few items to note....a "!@#$#@!#$" put a heaphone jack in the lower right corner of the rig (removed). I carefully filled it and texture painted the patch job, which matches the original texture paint very well....The repair job is virtually not visible as pictures show. One of the coil sockets was cracked...just a bit and was repaired. An original National coil set for 80 meters is included with the rig. Also, I believe I have 4 empty coil forms, maybe 6..... made by a fellow in IN....from Delrin...that will go with the set for your winding pleasure. These are very nice quality coil forms. This is really a neat radio. The best regen out there....(my opinion) Unfortunately the doghouse power supply does not come with the set. I used it with a little hombrew power supply that I wish to keep. Selling Price for the above $400 Prefer pickup, but will ship. Shipping is additional. Digital photo can be supplied.

Thanks,
Chris

Date: 14 May 2000 02:55:33 GMT
From: tubepwr813@aol.com (TubePwr813)
Subject: FS: SBE-34

SBE-34....This is a compact travel transciever, solid state, except for the driver and finals. It works, but could use an alignment. The service manual an operating manual come with the rig....The original SBE mic does too...this rig also has a Collins 2.1khz filter in it as originally supplied. The radio is clean and in good condition...it does not appear to have been in a smoking enviroment....I dont smoke...so none of these rigs have been exposed while they have been staying here in the shack :-) This rig is also capable of 12 VDC operation, though I have not tested that feature. Price: $225 Shipping addtional. Digital photo can be supplied.

Thanks,
Chris

Subject: Goodby Xsistors !!!

Bismarck Wichy (wd0hco@ev1.net) wrote:
: Have a good response for you... basically Nuvistor development would have
: continued. During the 60's, there was all sorts of interesting research
: going on in making smaller and smaller tubes. Those of us around know that
: many companies made small battery powered AM and FM tube radio sets.
:
: The end of tubes was caused by (1) the fact that transistors could be
: produced cheaper and faster and (2) they would withstand greater shock than
: glass or metal tubes.
:
: And so tube development and research stopped and the solid state era
: began...
:

There were a number of reasons that solid state devices overcame tubes,
but that process is still incomplete. The CRT still dominates the
TV and computer video market and we are well into 50 years of solid

state devices.

The early value of transistors was low power. Case in point was the
first general commercial use of transistors: hearing aids.

However, the value of solid state devices soared with the introduction of
monolythic integration (integrated circuits). Our computational
devices were doomed to be slow and stupid regardless of how complex
a transistor or tube circuit could be built. The propogation delays
of discrete components in a circuit that has 25,000 active elements
completely obviates the value of such complexity due to the sluggish
transit of electrons from element to element. Without the development
of the transistor, which largely lead to the developement of the IC,
we would be stuck in our ability to compute. The computers have
been our enabling tools for so many other advances, that the
technological revolution of the past 25 years would have been
just a lazy stroll in the sun.

From: wb9gkz@aol.com (WB9GKZ)
Subject: Have you signed it yet?

I don't think that I will be signing the
Drake petition.

Please consider Drake's latest attempt
at marketing a Ham Radio: the $600
2-Meter rig. Wonder how much Drake
lost on that one. With this track record,
I would imagine that an HF rig would
retail for about three to four thousand
dollars. The Drake-lovers would sure

have to dig-deep for that one!

How can an American manufacturer
compete with Icom et al? Consider
the 706MKII with DSP being closed
out now for 800-900 dollars.

I think that Drake is smart enough that
the hams could never support their
operation. The SWL's seemed to have
propped up the Company for awhile.
I'm not sure if that is still happening.

Look at Drake's latest SWL offering:
the "repackaged" SW-8 sold by Grundig.
Imagine how betrayed the folks that
shelled out 800 smackers for the SW-8
feel now that Grundig is selling the
same radio for 2-3 hundred dollars less!

I think that before Drake re-enters
the ham arena.....they need to go
back to Marketing-101.

Maybe I can help you on some of this. I have a Heath Sixer and
Twoer.

As you have already noticed, there were two versions of
the Sixer. The HW-29 and the HW-29A. The HW-29 was only produced
for one year, 1960, whereas the HW-29A was produced from 1961
to 1971. The main difference between the two is the type of
crystals that they used. The HW-29 was designed to operate with
50 MHz overtone crystals, but at the time, these were pretty
expensive. So Heath redesigned the oscillator/multiplier section
to operate from the lower cost crystals in the 8.333 - 9.0 MHz
range. To accomplish this I think that they had to add another
stage.

If you in fact have a HW-29, and not a HW-29A, my guess
is that your modification allows for the best of both worlds.
The unit, without the modification, can use 50 MHz crystals
and with the modification, use 8 MHz crystals. It may have
even been a special mod to allow the use of 12 MHz crystals.

I do have the original HW-29 manual and schematic, if you
are interested. I won't sell the manual or schematic but
I will make a copy for you. Use the email address in my
sig below.

> 2) The radio came with a crystal for 53.72. I can use that
> rock for testing, but I assume that the best freq to put
> the radio on is 50.40, yes?
>

I didn't think that they ran AM that low in frequency. I thought
that they were up around 52.0 MHz. But it's been a while since
I have been on 6 meters.

> 3) Do most AMers use horizontal or vertical polarization?
>

I have always use horizontal for 6 and 2 meters but a vertical
would work just as good. A vertical J-Pole is pretty simple
to make.

Subject: Identify These Tubes

Does anyone have the base diagram and specifications of either a 13E1 or
an HL10? Both tubes are from the 1960s. The 13E1 is a tetrode and I
think the HL10 is a half wave rectifier.

Thanks,

Fred

From: Lionel Sharp
Subject: Identify These Tubes

G'Day Fred

The 13E1 tubes were manufactured by STC (Standard Telephone & Cable Co.)
specs as follows:-

Filament 13 Volts @ 2.6 Amperes
Anode Volts 150
Screen Volts 150
Grid Volts -14
Anode Current 500 Milli Amperes
Mutual Conductance 35 (Ma/V)

0
H + + H
Anode + + H tap
G2 + + Grid 1
+
K

If my memory serves me correctly they were used in the 1950's in Voltage regulator
or Modulator circuits of the English manufactured Marconi Black & White TV
transmitters.

Equivalents are:-

C1158 5B/900A CV2377 CV6045 CV8061 7972

Nothing on the HL10

Subject: NCX-500 info Wanted

Hi,

Just got a complete NCX-500 xcvr with its ps at a flea today for the princely tab of $20. No manual, though. Uses pair of 6JB6 in the PA.

Need info on where to look for a manual, or will go to W7FG for a copy to make do with. Looks like it'll work. Been in a barn for many years, dusty, but it's all there, original knobs too.

Can someone point me in the right direction?

Moot - we lost our ability to protect ourselves with weapons from a tyrranical gov't long ago, or we'd have even better things like the fouders would have thought wise. The only reason people still have any guns, is that they have control of our minds.

Date: Tue, 9 May 2000 22:02:16 -0700
From: "Bob"
Subject: Pls explain -- eliminating hum in speech amp?

The rationale for that hint is that some tubes have heater-to-cathode leakage that causes hum in the amplifier. Raising the heater potential reverse biases the parasitic diode that the heater and cathode create, and prevents current.

The whole thing is rather worthless actually. If you have hum from that cause, you need to replace the tubes with good ones that don't have heater-cathode leakage.

The amount of potential required is such that, even on the peaks of the heater supply, the diode never gets forward biased. So the value given applies to 6.3 Volt systems.

In general, if you have hum, the way to eliminate it is first to find the cause, then take measures to eliminate it. The scheme above only works if that's the source of the hum.

From: "Bismarck Wichy"
Subject: Ranger I case screw rod substitute

This what I did with my Pacemaker... took front panel to hardware store and found some threaded rod. Also found a "cap nut" which goes on the rod but has a Phillips screw head. You could also use a "castle nut" but it doesn't look original but it's does look pretty good.

Then just cut the rod to size. This is pretty common on Rangers as those rods made it a pain to open the cabinet.

Good luck - WD0HCO

Subject: What If .. No xsistors

> Perhaps some microfluid designs would have been developed.

During the brief popularity of fluidics, Dow Corning made "fluidic IC's" using multiple layers of etched glass which were then fused together into a block. They were rather large, compared to a modern IC, but could have been smaller if contamination of the fluid (air in this case) was carefully controlled.

Subject: What If .. No xsistors

In school, in an analog ckt analysis class, our professor pointed out that the first analog tube computer's results were instantaeous (as he would say "for all practical purposes") compared to today's fastest digital computers. O'scopes were used for viewing the results of an integration or differential by using different types of amplifiers.

He and I were taking a smoke break once and were talking about how things would be different if digital computers never took off like they did.

He pointed out that, just because something is widely used doesn't meant it is the best way...

Maybe most computer designers are like me; hated doing calculus and would rather deal with logic circuits

David Ragsdale (dragsdal@calpoly.edu) wrote:
: Sitting around last night, an odd thought popped in my head (fairly
: normal occurence)-
: Where would we be if transistors had never been invented (and therefore
: none of their progeny (ic, etc.) had ever been developed).
:
: Imagine here we are, in May, 2000 with 40 more years of vacuum tube
: development under our belts. Would radios be significantly different
: than they were in 1960? Had tubes hit a plateau in development by that
: time? Was there anywhere else to go? Seems like we were seeing

: multiple uses stuffed in one glass envelope, would that have continued
: and grown, until we had something akin to large scale integration with
: vacuum tube devices?

I guess it is possible that micromachining and cold cathode
emitters might have been developed independently of ICs. Optics
might have made progress without semiconductors. However,
we would not have had good computing power without semiconductor
IC's, so all these developments would have been delayed due to
a lack of automated tools.

Subject: WTB good used 8950 tube for Siltronix 1011- C

Hi Joe,

I've go an SWAN 700CX ....uses 8950 .....too hard to find, 6LB6's are the
same tube only 6.3 volt fil, 8950 are 12.6v. (you must rewire the filament
connections for the new tubes ..)

I've been using the 6LB6's for years ...there working great ....anyway .....FYI ....73...

From: "D. S. Platt"
Subject: WTT HP Dig. scope for TEK

I have a virtually NIB condition HP 54600A 2-channel, 100MHz digital scope. This is the one with the all the automatic measurement cursors, etc. It comes with the accessory pouch, probe set, operating and maintenance manual, programming manual, floppy disk, and 2 HP 54658A Measurement/Storage modules that mount on the rear of the unit. I'll even add a serial cable. I'm looking to trade this digital unit for several older analog units (I'm from the old school). I'll accept offers of TEK 465B's and 475A's in trade. Minimum would be 2 465A's and one 475A. Ex-military 465's are not acceptable. Trades must be in similar condition, but don't have to be in cal. As always, I'm open to dialog (hi). I can scan and email the HP catalog page if someone doesn't know the unit, already.

Still looking for the elusive Hallicrafters HT-20 and HT32A/SX-101A combo.
Thanks for the read. de K3HVG

Duncan,
Out of curiosity are the tubes you're replacing going into an old
Yaesu? Are they NEC's? If so, you'll have to use NEC's or you may have touble
neutralizing them.
According the source I checked the only substitute is a 6KD6 tube. If you want
check out this website:
http://hereford.ampr.org/cgi-bin/tube?index=1

It will give you the tube base and characteristics of just about any tube you
can think of.
If you don't have a Yaesu product you're looking to replace the tubes in I'm
sure there's something else you can use.
Good luck and 73.

From: Lionel Sharp <vk4ns599@ozemail.com.au>
Subject: 6JS6A = 6JE6C/6LQ6?

G'day Duncan,

According to the information that I have I would say no.

The 6JE6C/6LQ6 has a Button 9 pin, E9-99 or E9-76 Base
whereas
The 6JS6A has a Button 12 pin, E12-74 Base
Whilst the tubes appear to be electrically and physically similar the
inter electrode capacitance are quite different. (you could have
neutralizing problems)

In the Tube Substitution Handbook, Number 21, by Howaard Sams & Co. they
do list the 6KD6 as a replacement for the 6JS6 but I don't think that
they considered the different inter electrode capacitance's of the 2
tubes. (you could have neutralizing problems)

Regards
Lineal L Sharp, VK4NS

Subject: FS:Collins 208U-3 2-30Mhz 3 KW RF Amplifiers

I have several Collins 208U-3 3 KW 2-30Mhz RF Amplifiers. These are in good
condition as removed from military service.

This is a military/commercial quality amplifier that uses a single 4CX3000A to
produce 3 KW PEP or average power with only 0.2 watts of input.

These are automatically tuned with a servo system that takes about 10 seconds to
tune-up.

The primary power input is 200-250VAC, 3Ph, 47-60Hz.

The net weight is 975Lbs, size: 32" x 23" x 70" Tall.

If you have 3Ph power and the room one of these superb Amplifiers would

make a great addition to your station.

I am offering these unpacked FOB Somis, CA as follows:

untested less the 4CX3000A Tube $3,000. unpacked.

I have a few NEW Guaranteed 4CX3000A tubes at $1,000. each

Crating by a professional packer is $350.00 additional.

A complete service manual is included at no charge.

There is a photo of this item on our web site

In rec.radio.amateur.boatanchors rooster <rooster@bedford.net> wrote:
> 11 meters was installed as an option, but the transmit was disabled. there
> was a wire that had to be removed to recover transmit ability.

I bought my FT101-EE (FT101-E without the speech processor)
new-in-the-box in 1975; it already had 11M on the bandswitch
and a crystal in the socket...and sure, I cut the brown wire
to enable 11M transmit. Sold it to a CBer in 1984.

IIRC, when 11M belonged to the hams, you could operate that band
full duplex on 'phone. I made a couple of contacts before it
went CB. 11 was never very popular before SSB and low level mix-
ers as it wasn't harmonically related to any of the other ham
bands and required a special VFO band operating somewhere around
the high end of 6 MHz (or Mc in those days).

I also owned a Yaesu FTDX-100, the forerunner of the FT101 series.
With all circuitry on one board, it was a nightmare to work on and
was never imported into the USA due to alleged patent infringement
and circuit similarities to the SBE SB34.

Subject: Goodby Xsistors !!!

Have a good response for you... basically Nuvistor development would have continued. During the 60's, there was all sorts of interesting research going on in making smaller and smaller tubes. Those of us around know that many companies made small battery powered AM and FM tube radio sets.

The end of tubes was caused by (1) the fact that transistors could be produced cheaper and faster and (2) they would withstand greater shock than glass or metal tubes.

And so tube development and research stopped and the solid state era began...

Well I am more than happy to tell you it is now... - ENDING - ....

NO that 12AX7 and 6L6 is not coming back into your stereo!!! But very promising research is being done on Nanotube technology. Basically packaged as a solid state device but with this technology you can "potentially" reduce power and increase active device count.

Nanotubes currently act as mini-triodes (some researchers already claim pentode actions) and you can fit hundreds of them in the space of a single P/N junction!!! Building them with current sub-micron technology is pretty simple. Many of the big electronics companies are involved so much of this is HUSH HUSH as the patents go flying out the door to DC but as with anything cool - many scientists have web sites up and running...

Suggest you do a search on "Nanotubes". There are thousands of sites now up.

What was once old is new again.... Who wudva thunk it??? !!!!

From: Bruce E Stock <stockb@accessone.com>
Subject: Heath Station: HR10 Rec. and DX60 Xmtr.

A classic Heath beginner's station. These pieces have been thoroughly cleaned up, repaired as necessary, weak tubes have been replaced, then aligned and tested. The complete station picture is at:

http://www.accessone.com/~stockb/radios/HRDXsta2.jpg

HR-10 RECEIVER -- This is an AM/CW/SSB ham-bands only receiver (no WARC), with a crystal lattice filter in the IF. It has good sensitivity on all bands. Minor scratches on front panel, plus the usual scuffs scratches on the outer case (an overspray would make it an excellent looking case). The insides are in very good condition, see:

http://www.accessone.com/~stockb/radios/HR10inside2.jpg

DX-60 TRANSMITTER -- The original (and best styled) DX-60. Good power out on all bands. CW plus controlled-carrier AM. Front panel is excellent, case is in same condition as the HR-10's. Inside cosmetics are not bad, but there is tarnish on the chassis, and some rust underchassis. See:

http://www.accessone.com/~stockb/radios/DX60inside.jpg

Available as a package for $160 (check or MO only) plus shipping from Seattle (98144).

Right you are. And this, of course, means CDs (both audio andcomputer) as
well as devices such as digital signal processors which depend upon LSI
and ICs. Hence, whatever else might have happened, LPs might still be
extant (some of us believe they have better bass response than CDs
anyway) and, most certainly, cassettes (and, perhaps still, reel-to-reel
tapes) would be prominent. I'm not sure audio quality would have suffered
much from what it is today -- it might be better -- but certainly we
wouldn't have PCs and the Internet. Whether this would have been good or
bad I leave to others.

Now *that* would be interesting. But they would still have been analog
devices. Wonder what sort of logic and processing systems would have

resulted from the ability to have a kazillion analog devices in a tube socket?

Incidentally, what are "field emissive displays"? My ignorance is showing.

And while I don't wish this thread to die (I'm a sucker for "alt.history.what-if"), this thread makes me wonder what the smallest tube ever made was and what the smallest tube in everyday use ewas? Nuvistors were pretty small but boy did they run hot!

I'm still using a stereo with a Macintosh amp from 1968 with tube finals and a nuvistor in the FM receiver. Seems kinda weird to plug a CD changer into it but that's what I've done.

The transistor and later the IC were enabling technologies. The transistor lead to development of the IC which lead to development of the computer which enabled development of things like cellular phones that use spread spectrum modulation. take away the transistor, and you have to take away ICs, computers, software, etc.

Maybe if transistors hadn't been made workable, tubes would have developed into something like ICs - it is obvious that miniaturization was taking place even in tube based equipment. Maybe tubes would have been built in arrays of almost microscopic units similar to field emissive displays.

What if the tube design had evolved into using uranium cathodes,
so instead of thermionic emission, we had radioactive emission?

Hmmm ... you'd want a Beta-emitter to simulate a cathode, not an
alpha-emitter. Hence, I believe that you couldn't use U-238 (isn't U-238
an Alpha-emitter?). Also, due to the nature of radioactivity, the rate of
emission would decrease markedly over time. Close but no cigar!

I've often wondered about that. Don't most beta sources emit electrons
at substantially higher energies (MeV equivalent) than a typical tube
cathode? It might be difficult or impossible to control the flow of
current in a radioactive-cathode tube with a conventional grid
structure.

Anyone know for sure? I'm clearly rusty on the fundamentals... what
exactly _is_ the difference between beta radiation and cathode rays?

Directly heated filaments work better if impregnated with Thorium. Thoriated
tungsten filaments are still found in some old types of power tubes..

lack of solid state (use that term, not transistor) would have
led to vacuum integrated circuits - in fact such things a FEDs
are being developed now, so there may actually be a return to
electron transport devices - in particular, in a radiation
environment, a non-solid state device has some advantages
(like much greater total dose and upset immunity). further,
with electron micrography you can create small cathode
structures that dont require heating - the field intensity is
sufficient to drag electrons off the surface directly -
spectrum and other mags have had articles on this - FEDs were
discussed in spectrum within the last year or so.
Also, imagine the IC without solid state - think of a super
compactron.

Hello to all,

This is a bit off-topic for the hams, but...
If you have any interest in vintage CB radio, please drop by
my Raytheon CB web site at this address:

http://www.qsl.net/k5dh/raytheon.html

It's a "work in progress", but there are specifications and
pictures for most of the Raytheon models I can identify. I
am looking for radios for my collection, along with any kind
of advertising, magazine articles, sales literature, manuals,
and so forth. I'm especially looking for scans of magazine
ads that I can post on the site. Please check it out! :)

Not be "modified-" Sorry!
There aren't that many of these in original condition left.
You can still find single TX and single RX mounts with
a little "beating the bushes." Which models of
transmitter and receiver do you want to use?
The AN/ARC-5, ATA/ARA and SCR-274N families of
Command Sets use differing racks.

738 Magazines ..trade for old AM or Vintage SSB Gear.

QST's from 1947 to 1994 heavy into 50's and 60's issues 222 in all.
CQ's from 1947 to 2000 again heavy in 50's and 60's issues 233 in all.
73 Magazine 118 issues heavy on the 60's.
Ham radio 100 issues 1970 to 1989 good technical articles.

Bonus: July, August 1995 Electric Radio
Radio-Electronics Dec 1968
Popular Electronics Dec 94 to Dec 96 and Popular Communications Jan 96 to Dec 97 and Jan to June 2000
65 bonus issues.

The 738 issues are worth at least $700 and all are readable and in good condition. Many are complete years!

Trade for 50 and 60's gear (Hammarlund, National, Swan, SBE, Harvey Wells, Heath, Johnson) or what have you..Must be worth $200 to $300.

Hopefully within a few hours of Atlanta but will consider all offers. Will arrange shipping or delivery.

A Wonderful way to jump start your library with "real magazines"!

First thing to do is lube the tuning cap and pulleys. That will very
often fix a slipping dial string. If that doesn't do it, you can try
applying
some rosin or "dial cord dressing" that is available from Bill Turner
over on rec.antiques.radio-phono. Finally option: you can replace
the string. I have found that high test fishing line works well (not
monofilament stuff). When you replace the cord, if the original cord
was wrapped around the drive shaft 3 times, wrap it 4 or 5 times with
the new string. That will absolutely fix any problem you have with a
slipping dial cord.

2254. LAST DAY! FA: WWII Navy/Bendix LM-18 Frequency Meter

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-17 00:00:00 UTC
From: radiotek@pacbell.net
Message-ID: <3922d5b7.12224112@news.nvbell.net>
Source record: 66445

This is a really nice and clean collector's item from the World War 2
era! This is a WWII Navy/Bendix LM-18 Frequency Meter for auction.
It is in great to excellent shape! I even have the original matching
manual for it. This is the last day and there is no reserve!

Please visit:

Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

Jeff:
Maybe I don't understand the question, but why can't you just purchase a relay with the coil voltage appropriate for the output of the 850 and then key the Collins rig from that?

Subject: 6AR6 pulls

Have a good quantity at $27/pr.

They're beam pentoads that look just like a 5881 but have larger
cathode for Mil pulse-modruater use.

Each pair come with ckt. xerox showing their use in a 1947 20W all-triode
hi-fi amp. Catch this, called 'golden ear 2.'

Subject: 6JS6A = 6JE6C/6LQ6?

Duncan,
Out of curiosity are the tubes you're replacing going into an old
Yaesu? Are they NEC's? If so, you'll have to use NEC's or you may have touble
neutralizing them.
According the source I checked the only substitute is a 6KD6 tube. If you want
check out this website:
http://hereford.ampr.org/cgi-bin/tube?index=1

It will give you the tube base and characteristics of just about any tube you
can think of.
If you don't have a Yaesu product you're looking to replace the tubes in I'm

sure there's something else you can use.
Good luck and 73.

From: <thompson@mindspring.com>
Subject: 738 Magazines for Trade

738 Magazines ..trade for old AM or Vintage SSB Gear.

QST's from 1947 to 1994 heavy into 50's and 60's issues 222 in all.
CQ's from 1947 to 2000 again heavy in 50's and 60's issues 233 in all.
73 Magazine 118 issues heavy on the 60's.
Ham radio 100 issues 1970 to 1989 good technical articles.

Bonus: July, August 1995 Electric Radio
Radio-Electronics Dec 1968
Popular Electronics Dec 94 to Dec 96 and Popular Communications Jan 96 to Dec 97 and Jan to June 2000
65 bonus issues.

The 738 issues are worth at least $700 and all are readable and in good condition. Many are complete years!

Trade for 50 and 60's gear (Hammarlund, National, Swan, SBE, Harvey Wells, Heath, Johnson) or what have you..Must be worth $200 to $300.

Hopefully within a few hours of Atlanta but will consider all offers. Will arrange shipping or delivery.

A Wonderful way to jump start your library with "real magazines"!

Reply via e-mail.

All depends on it's condition.

By the way, be careful cleaning out the mouse droppings. There are deadly diseases you can catch from some types of it. Wear a particle mask and clean it out with a water hose to keep particles from becoming airborne.

Let me know if you have specific questions.

Subject: For Sale: National NC57......

Hi All,
I have a National NC57 for sale. It has been brought up to par and works well on all bands. The speaker has been replaced as the original was full of holes, but the replacement came from another NC57. It has all of its original knobs and even has its bottom plate. The cabinet could stand to be repainted, but is acceptable. I am asking $120.00 for the set as it is right now. The buyer will pay shipping via UPS or USPS. I have a couple of photos that I can send you if interested. Please email me directly with any questions, etc...
rgds,
Mark S.

From: anchor@coastalnet.COM (Al Parker)
Subject: FS: Drake TR-4/MS-4/AC-3, or with RV-3

I need to reduce the "inventory" around here. Too many new things to enjoy have come in lately. These units are all operating fine, and have been used by me off & on for several months, or more.
TR-4 - s/n 32358, nice panel, no scratches, case has been resprayed, looks very good. Has good finals, full output on all bands. Recently fully aligned. Inside has been cleaned, but some black spotting. A previous owner has put 3 or 4 small red dots on the 10m portion of the dial, I guess to indicate his limits.
MS-4 - case has been resprayed, looks very good. Missing the MS-4 logo, but it is an MS-4 (11-5/8" lg). Has a replacement speaker in it.
AC-3 - good, in use.
RV-3 - nice panel & case, no scratches. Not sure if switch knob is original, it's slighly bigger than the one on my RV-4 (which is my replacement for the RV-3).
Prices--
TR-4 w/MS-4/AC-3 and manual copy $275
TR-4 w/RV-3/AC-3 and manual copy $325
RV-3 only, if TR-4 is sold first, $85
all prices plus shipping

73,

Al, W8UT

Subject: FS: WWII German and British Morse keys

I have for sale a WWII German army CW key and a British Air Ministry Morse key.

The Germany key is a type T1SBF and it has the German eagle stamped in the base plate.

The British key is labeled: AM Type B. Ref No5c/372 Switchbox Identification. It was used on the Spitfire but also on other planes of the day. It was used to key the Navigation and/or Landing lights for identification purposes, when radio communication was not available or not allowed. The key is made of Bakelite, round, 3.5" in diameter and 1" thick. The key protrudes out of the front just below two lever switches marked Downward and Upward respectively. The switches have three positions: Morse, Off and Steady.

Both key's are in good condition and I have pictures of them I can Email

Should you be interested, I'm asking 75$ per key. Shipping from Holland Will be 20$ when sent together or 15$ per key when sent separate.

If you have a TRC-77 available then I'm interested in a swap

Subject: Need Command Rig Dual mount

Not be "modified-" Sorry!
There aren't that many of these in original condition left.
You can still find single TX and single RX mounts with
a little "beating the bushes." Which models of
transmitter and receiver do you want to use?
The AN/ARC-5, ATA/ARA and SCR-274N families of
Command Sets use differing racks.

> Any ideas where to locate one?
>
> --
> Regards
> Ray

Ray,

browsing this ng I found the following webpage that gives quite a reasonable picture of the T-195 front panel:
http://web2.airmail.net/fledda/radio_GRC19.html

Looking at my T-195 manual, the rh meter certainly is scaled in VU. Can't tell what size it is, but it looks to be identical in style and type to the left hand one.

If you find one, please let me know where you found it, as I need one for my T-195 as well!

If you also know where to get plugs/sockets for the internal modules, or alternatively "board extenders" - I would be glad to hear about those too. Its virtually impossible to work on the set with power applied and the modules in place.

From: rich a <rckchp@home.com>
Subject: tuning dial string

Greetings,

I have an old radio (Century 21), not exactly a "boat anchor" on which
the string/cord which wraps around the variable tuning capacitor and the
tuning dial seems to have streched causing the dial to slip, rendering
it usless for correct freq. readout. Short of replacing the string, does
anyone know of a remedy , such as some substance which could be applied
to the string causing it to slightly shrink (or get "sticky") and regain
it's grip ? Thanks in advance for any/all replies.

Regards,

Rich / KB2CPE

Date: Wed, 17 May 2000 03:20:08 -0500
From: jm_lekostaj@ibm000.net (Joe LeKostaj)
Subject: tuning dial string

Rich,

Depends on just how loose it has become. Many years ago I read in QST that
putting powdered alum on a dial string can help. Tried it once, but didn't
work for me. I'd suggest this: if your string is knotted at the ends, as
opposed to having a metal crimp, try loosening the knot only slightly with
a toothpick but don't undo the knot altogether. Then use a needle-nose
pliers to pull some of the slack thru the knot, then pull it tight again.
I've restrung a couple of broadcast radios lately, and it isn't really as
hard as it seems at first. Good luck!

Subject: What If .. No xsistors

Although the thorium is a radioactive element, it is used for its thermionic
emissions properties (much better than pure tungsten), not for its radioactive
properties.

BTW, thorium also makes the tungsten wire more ductile, and thus easier to draw
and bend, which is why GE was using toriated tungsten to make lightbulbs at the
time the guys in the tube works ran out of tungsten wire for filaments and went
over to borrow some tungsten wire, only to discover a much better material for
filaments (vis '01 vs. '01A triodes).

2259. Heathkit DX-40 filament circuit question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-17 00:00:00 UTC
From: k5dh@raytheon.com
Message-ID: <H_BU4.48$CH5.10216@bos-service2.ext.raytheon.com>
Source record: 66450

In the Heathkit DX-40 transmitter, the 6CL6 buffer amp tube (V2) is on a separate, isolated power transformer filament winding, while all of the other tubes and the terminal on the accessory socket are powered off of another filament winding. Why was it done this way? I have a DX-40 which is missing its power transformer, and I'm looking for some kind of substitute unit. What would it hurt to add V2 to the regular filament string, in the event I can't find a transformer with two 6.3 VAC windings?

From: Tom <hmm@bzz.com>
Message-ID: <F%BU4.1009$L82.1407@client>
Source record: 66451

Despite the many warnings I received concerning this delicate part, last night while removing the front panel, I broke it cleanly in two. Now I'm looking for a suitable replacement, or was wondering if I can home brew something out of glass epoxy circuit board material. Is flexibility of the coupling an issue here, or is it merely insulation of the VFO shaft? This is my first foray in restoring an old piece of gear, so everything is a new experience. Frustrated, but having fun.....Tom K3GM

Your in luck, the FCC just relax one of the requirements.

There is two "beginner licenses", Novice and Technician

Technician is very popular, it allows someone full privileges in the the VHF, UHF and microwave amateur bands. It consist of a test of general radio and other theory, operating practices, and rules and regulations.

Novice, allows restricted privileges in the Short-wave band, 1 VHF band and 1 microwave band. It consist of a test of basic radio and other theory, operating practices, and rules and regulations. There is a 5 WPM Morse code test.

While no longer noted on your license, if a person holds a Technician license and passes the Morse code test, you obtain privileges for both novice and technician license.

General, allows full privileges on most of the portion of the 5 main short wave bands, plus the 3 added in 1979, and the one medium wave band inaddition to and the VHF/UHF/and microwave bands. I consist of Novice/Technician test, plus a couple of extra questions, same Morse code test.

Extra, full privileges. Very comprehensive test on all modes of operation, same code test

Contact the American Radio Relay League (ARRL) and www.arrl.org. They should be able to point you a club in your area.

Best of luck.

Dennis

I would not recommended it. The reason this was probally done was the transformer could not supply enough current for the final and all the other tubes. This was placed on it's own transformer. If you can find a replacement transformer with a higher current rating, this should work, if not, you will need to locate a second transformer. Check all the tube specs and check the filiment ratings and add them up. You should not go over 50-70% of the transformers rating.

If you know of a ham radio club in your area (sometimes listed in the yellow pages) you can start by attending a meeting. If you don't, most Radio Shacks have books and other documentation regarding obtaining an amateur radio license. From your description of the radio it sounds like you will need at least a General Class license unless you want to limit your activity to 10-meters. I would worry more about the FCC than irritating other hams. Good luck to you.

If you operate without a license I don't think you will "irritate a
lot of HAMS" but you might piss off the FCC and find yourself in
jail and paying a hefty fine. Go to WWW.ARRL.ORG on the WEB and
learn what is necessary to get a ham license.

The TV-7 military jobs are great for small signal tubes. It might take
a
special piece of equipment for testing final amp tubes.

If that's a Ten-Tec Century 21 it's most likely not the "string". If the symptom is that the pointer will not return all the way to the left it's the elastic bun gee cord inside. If the pointer moves, then stops, then moves again and the frequency does not run up/down and the tuning is jerky then it's in need of a PTO rebuild. I just replaced the bun gee on both my 540 Triton IV and Argonaut 509 plus did the PTO rebuild on the 509. Plays like a new radio now and tracks great. Ten-Tec sells the rebuild kits for $20 to do your own or rebuilds them at the factory for +/- $100.

I'd phone Ten-Tec Service Department and speak to Garland Jenkins. He'll help you and he's forgot more about these vintage Ten-Tecs then anyone else knows.

One other thing, Rich.
Before you try anything, draw a clear diagram of exactly how the string runs from start to finish, including the spring and all of the pulleys.

2277. FS: GRC-109 (3) piece set

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-17 00:00:00 UTC
From: tubepwr813@aol.com
Message-ID: <20000517193828.24287.00003630@ng-cd1.aol.com>
Source record: 66468

Military Spy Radio...GRC-109.....I have the 3 pieces, Transmitter T-784 (w/built in CW key), Reciever R-1004 and Power Supply PS-2685. This rig works well. The reciever was aligned and is quite accurate. A manual comes with the unit. Selling price $335 Unit is heavy, but shippable. A digital pic can be sent on request.

Thanks,
Chris

2278. FS: SBE-34 (reduced price)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-17 00:00:00 UTC
From: tubepwr813@aol.com
Message-ID: <20000517194149.24287.00003632@ng-cd1.aol.com>
Source record: 66469

SBE-34....This is a compact travel transciever, solid state, except for the driver and final PA. It works, but could use an alignment. The service manual an operating manual come with the rig....The original SBE mic does too...this rig also has a Collins 2.1khz filter in it, as originally supplied. The radio is clean and in good condition.

This rig is also capable of 12 VDC operation, though I have not tested that feature. Price: $200 Shipping is additional.

Thanks,
Chris

Tom,

I had the brittle phenolic break in one of the Rangers I restored. I took the metal hardware and drilled out the rivets. Then I cut a piece of heavy gauge but flexible plastic about 1" square. Using number 4 screws and nuts, I connected the coupling hardware to the plastic and reassembled it. It worked better than the original. The key function is to insulate the shaft but flexibility is important for smooth dial drive.

Rob K6RB

Yeah, my little Leica IIIf, red dial, that I bought for about $98 used
is now worth 5 or 6 times that amount.

What's amazing, if you used to buy LPs when you were a kid, is what
they are worth nowadays... I've got crapola LPs from the 60s that are
worth a fortune nowadays...

Damn, wished I'd a-bought that Beatles album with the butchered pigs
on the cover... I saw it in the store right after release... $3.98...
passed on it...

2285. FS: Drake TR-4/MS-4/AC-3, or with RV-3

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-17 00:00:00 UTC
From: anchor@coastalnet.COM
Message-ID: <3.0.6.32.20000516202113.008fe740@mail2.coastalnet.com>
Source record: 66510

I need to reduce the "inventory" around here. Too many new things to enjoy have come in lately. These units are all operating fine, and have been used by me off & on for several months, or more.
TR-4 - s/n 32358, nice panel, no scratches, case has been resprayed, looks very good. Has good finals, full output on all bands. Recently fully aligned. Inside has been cleaned, but some black spotting. A previous owner has put 3 or 4 small red dots on the 10m portion of the dial, I guess to indicate his limits.
MS-4 - case has been resprayed, looks very good. Missing the MS-4 logo, but it is an MS-4 (11-5/8" lg). Has a replacement speaker in it.
AC-3 - good, in use.
RV-3 - nice panel & case, no scratches. Not sure if switch knob is original, it's slighly bigger than the one on my RV-4 (which is my replacement for the RV-3).
Prices--
TR-4 w/MS-4/AC-3 and manual copy $275
TR-4 w/RV-3/AC-3 and manual copy $325
RV-3 only, if TR-4 is sold first, $85
all prices plus shipping

2294. tuning dial string

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-17 00:00:00 UTC
From: rich a <rckchp@home.com>
Message-ID: <39220DEB.E72D911F@home.com>
Source record: 66519

Greetings,

I have an old radio (Century 21), not exactly a "boat anchor" on which the string/cord which wraps around the variable tuning capacitor and the tuning dial seems to have streched causing the dial to slip, rendering it usless for correct freq. readout. Short of replacing the string, does anyone know of a remedy , such as some substance which could be applied to the string causing it to slightly shrink (or get "sticky") and regain it's grip ? Thanks in advance for any/all replies.

Regards,

Rich / KB2CPE

All depends on it's condition.

By the way, be careful cleaning out the mouse droppings. There are deadly diseases you can catch from some types of it. Wear a particle mask and clean it out with a water hose to keep particles from becoming airborne.

Let me know if you have specific questions.

Rich,

Depends on just how loose it has become. Many years ago I read in QST that putting powdered alum on a dial string can help. Tried it once, but didn't work for me. I'd suggest this: if your string is knotted at the ends, as opposed to having a metal crimp, try loosening the knot only slightly with a toothpick but don't undo the knot altogether. Then use a needle-nose pliers to pull some of the slack thru the knot, then pull it tight again. I've restrung a couple of broadcast radios lately, and it isn't really as hard as it seems at first. Good luck!

Source record: 66531

Hi there,

Does anyone know of a crystal manufacturer in the USA willing to cut
crystals in only ones or twos below 1 MHz?

I require one or two HC6 or HC48 990 kHz fundamental parallel
resonance 30 pF load capacity.

UK manufactures are outrageously expensive at these frequencies for
one-offs!

Thanks,

Ian

2307. FS: WWII German and British Morse keys

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-17 00:00:00 UTC
From: Nico van Dongen <nico.vandongen@compaq.com>
Message-ID: <8ftu8p$dc3$1@mailint03.im.hou.compaq.com>
Source record: 66532

I have for sale a WWII German army CW key and a British Air Ministry Morse key.

The Germany key is a type T1SBF and it has the German eagle stamped in the base plate.

The British key is labeled: AM Type B. Ref No5c/372 Switchbox Identification. It was used on the Spitfire but also on other planes of the day. It was used to key the Navigation and/or Landing lights for identification purposes, when radio communication was not available or not allowed. The key is made of Bakelite, round, 3.5" in diameter and 1" thick. The key protrudes out of the front just below two lever switches marked Downward and Upward respectively. The switches have three positions: Morse, Off and Steady.

Both key's are in good condition and I have pictures of them I can Email

Should you be interested, I'm asking 75$ per key. Shipping from Holland Will be 20$ when sent together or 15$ per key when sent separate.

If you have a TRC-77 available then I'm interested in a swap

Even in OEM quantities the price of crystals in that range is 3 to 10X the price of crystals at 10+ MHz. In large quantities the low frequency parts are contoured in pipes. Done one at a time instead of in pipes the cost is even higher.

You might do better to find some on the surplus market rather than from a manufacturer. Another option depending on the equipment would be to replace the crystal with a 990 KHz packaged oscillator of one sort or another.

HEATHKIT PARTS NEEDED:

For DX-40 transmitter:
- Power transformer (or a suitable substitute).
- Plate current meter.

For VF-1 vfo:
- Frequency dial scale, in good shape with all markings intact.

For AC-1 antenna coupler:
- Front panel, in good shape with all paint and markings intact,
and with no extra holes or modifications.

For MT-1 transmitter:
- One medium-size satin finish knob.
- Glass window that goes in front of the VFO dial drum.
- Cabinet, rust-free with no extra holes drilled in it.
- Operator's manual with alignment and troubleshooting
information (a good photocopy would be fine). I have
the schematic, so don't need that.

L.EGAL C.A.B.L.E TV DE-S.C.R.A.M.B.L.E.R

Want to watch Sporting Events?--Movies?--Pay-Per-View??

*This is the Famous R-O Shack TV D.e.s.c.r.a.m.b.l.e.r
You can assemble it from R,a,d,i,o S,h,a,c,k parts for about $12 to $15.

We Send You:
1, E-Z To follow Assembly Instructions.
2. E-Z To read Original Drawings.
3. Total Parts List.

**** PLUS SOMETHING NEW YOU MUST HAVE! ****
Something you can't do without.

THE UP-TO-DATE 6 PAGE REPORT:
USING A D-E-S-C-R-A-M-B-L-E-R LEGALLY

Warning: You should not build a T.V D.e.s.c.r.a.m.b.l.e.r
without reading this report first.

Frequently Asked Questions--CABLE TV DESCRAMBLER

Q: Will the d.e.s.c.r.a.m.b.l.e.r work on Fiber, TCI,
Jarrod and satellite systems?
A: The answer is YES. In respect to satellite,
you just get more stuff! There is one exception:
The descrambler will not work with DSS satellite.

Q: Do I need a converter box?
A: This plan works with or without a converter box.
Specific instructions are included in the plans for each!
Q: Can the cable company detect that I have the descrambler?

A: No, the signal descrambles right at the box and does
not move back through the line!

Q: Do I have to alter my existing c-a-b-l-e system,
television or VCR?
A: The answer is no!

Q: Does this work with my remote control?
A: The answer is yes. The descrambler is
manually controlled--but very easy to use!

Q: Can you email me the plans?
A: No the program comes with an easy to follow picture guide.

Q: Does this work everywhere across the country?
A: Yes, everywhere in the USA plus England,
Brazil, Canada and other countries!

Q: Is this deal guaranteed?
A: Yes, if you are unhappy for any reason we will refund your money.

Q: When I order, when will I get my package?
A: We mail out all orders within 24 hours of receiving them.

Q: How much does it cost to get the instruction
plans, the easy to follow diagram, and most
important of all the "Using a D-e-s-c-r-a-m-b-l-e-r LEGALLY Report".
A: You get the complete 6 page report and instruction package all for just--$10.00

Q: How do I order?
A: Fill out form below and send it, along
with your $10.00 payment to:

C-a-b-l-e-F-R-E-E-TV
1342 East Vine Str #218
Kissimmee Fl 34744

(Cash, Check or Money Order.)

(Florida residents include 7% Florida State Sales Tax)

(All orders outside the U.S.A. add $5.00)

From: goldenbadger@mindspring.com
Subject: Heathkit SB-200 Testing (please help)

I've recently acquired an old SB-200 from an estate sale, in good condition and with documentation, however when I turn in on and set the meter to indicate the HV, I do not get any reading.

I've checked and high voltage is present in the unit, various restance checks from the manual are ok, and I've checked the continuity of various circuits. The meter even functions when I disconnect it and put an artificial voltage across it.

I've even used a signal tracer and followed an AF signal to the point where in enters the first tube at which point it stops, to continue it would either have to go on inside the tube or go through a 0.02uF capacitor to enter the next tube, and I'd don't know which one it is supposed to do so I can't tell if I have a problem there.

My basic question is could a bad tube cause this problem? My
experience with tubes is very limited but growing.

Also if some kind soul with an SB-200 would like to help talk me
through this, I'd sure appreciate it. I'm in the Knoxville, TN area.

Thanks
Bill

Subject: HW-29; need some help

I picked up an old Heath 6M lunchbox, as much for the fun of reworking
an old tube set and getting it on the air as getting on six. I have a
few questions about the set that I am sure some of the old hands could
answer:

1) The set has a mod in it that appears to be either a Heath
option/retrofit or a very clean 3rd party add-on. It is a small
bracket with a crystal socket, a 6AK5, a slug adjustable adjustable
LC, and a few other parts. A wire from the mod plugs into one side of
the original crystal socket through a small silver mica C. The manual
that came with the radio is for a HW-29A, and the front panel on this
set states that it is a HW-29, so it's not much help..

Subject: Spring Swap Meet, this coming Saturday

Coming up this weekend,
Saturday, May 13th the CC-AWA will
host the forth annual "Spring Swap Meet"
at the North Carolina Transportation Museum
"SPENCER SHOPS ".
...
This is a really nice museum with an operating Steam
powered train, a working "Round House",
and lots of interesting exhibits.
Bring the entire family.

The Swap Meet starts as soon as the Museum opens at 9am.
It will be in the picnic area under the shelters.

The admission to the museum and the Swap Meet is F R E E !!!!

Everyone is welcome, you do not have to be a member of the CC-AWA
to take part in this or any other CC-AWA sponsored event.

Spencer Shops is located in Spencer NC, just a short distance north
of Salisbury NC, and just off of I-85 at exit 79. Look for the large brown
signs that
will direct you to the North Carolina Transportation Museum,
SPENCER SHOPS.

Remember Spencer Shops doesn't open until 9am, there no need to get
there early.

>computers, software, etc.

Not really. The first generations of computers used tubes. ENIAC, the first
full scale general purpose digital electronic computer, used 18,000 of them. By
the mid '50s, the giant SAGE system used 44,000 tubes.

Spread spectrum was invented in the '40s. One of the the coinventors was Hedy
Lamarr (yes, THAT Hedy Lamarr).

One of the best kept secrets of WW2 was the proximity fuse. This was a small radar set that was installed in the nose of all types of artillery shells, and would detonate the shell when it neared an aircraft or other large, conductive target. Each fuse used four subminiature tubes, and had to withstand severe conditions (months of storage, use in all climates, 20,000 G shock, no adjustments, and near-zero chance of false detonation). All of these problems were solved, and the fuses were produced by the millions.
>
>Maybe if transistors hadn't been made workable, tubes would have developed
>into something like ICs - it is obvious that miniaturization was taking place

Perhaps.

Here's another thought:

Could the transistor have been developed without the tube coming first?

73 de Jim, N2EY
>

Date: Thu, 11 May 2000 06:16:17 -0700
From: fb <fb030663NOfbSPAM@rocketmail.com.invalid>
Subject: What If .. No xsistors

Hi,

Jim asked: Could the transistor have been developed without the
tube coming first?

I think so, as an off growth of Crystal Sets on the receiver
side, however on the Transmitter side without Tubes, it would
have stopped with a form of spark gap for transmitting.

I think it would have taken much longer to get where we are
or even were we with the radio science in say WW2.

What do you all think?

Friend of mine was in the AF and one of his better assignments was to
examine some of the avionics that were removed from a Mig-25 that
was-ahem-misappropriated by a Soviet pilot and flown to Japan. Big

international incident. Also revealed that the Soviets were using a lot
of steel structural elements rather than titanium, range of this bird at
best cruise was only about 800 miles. A good chunk of the avionics suite
was vacuum tube stuff, used a lot of power but largely immune to the big
EMP that nukewar could bring.
I've also seen the recreated chunk of the Berry-Atanasoff computer in
the Iowa Historical Society building in Des Moines-it is about the size
of a desk. Lots of triodes. let it be a lesson to folks who have
developed something unique to take the time and patent their ideas.
Cheers
Robert

Er, it's not terrribly practical. I suspect all the radium in the world
dosnt put out more than a few milliamps at best.

One curie is
a whopping amount of radiation,
37 billion electrons per second, but that's less than a
micro-micro-micro-amp.

--> Transistors are analog devices, too. It's all in how they're used.
There's no reason you couldn't do digital switching with a tube; you can do
it with any device that can be transitioned quickly from hard conducting to
hard cutoff.

Also take a look at http://www.computer50.org

They have built a replica of the "Small Scale Experimental Machine" which was
the prototype of the Manchester Mk1 computer. The SSEM ran its first stored
program on 21st June 1948, You can download an emulator and try programming

it yourself... 32-bit registers BTW ;-) We are now coming up to the 50th
anniversary of the first computer sold to a private customer (sold in 1951).
I think by now we would have had fairly complex computers, even without
transistors, but they would have filled whole buildings!

Doesn't the emission of the thoriated tungsten filament decrease
markedly over time too? How long? Do Beta particles go through glass?
If so, you could have replaceable radio filaments, just a little 'dent'
in the glass where you clamp a piece of uranium or whatever...then the
tubes would last forever, barring physical damage...

Seems to me years ago I read a Science Fiction story that postulated the
development of chemical engineering to a high degree, while electricity had yet
to be discovered. They were at the point where they were launching manned

rockets, but having a few problems with guidance, etc. Someone was trying to convince them to look again at an experiment they all did in college, where two dissimilar metals were immersed in a mild acid, and when touched together, bubbles formed. "Why does there have to be contact?" But the powers that be were too involved in the direction they were going to listen.

Subject: What If .. No xsistors

Although the thorium is a radioactive element, it is used for its thermionic emissions properties (much better than pure tungsten), not for its radioactive properties.

BTW, thorium also makes the tungsten wire more ductile, and thus easier to draw and bend, which is why GE was using toriated tungsten to make lightbulbs at the time the guys in the tube works ran out of tungsten wire for filaments and went over to borrow some tungsten wire, only to discover a much better material for

filaments (vis '01 vs. '01A triodes).

ENIAC was fully operational in 1946. Parts of it were returned to the Moore
School of the University of Pennsylvania, and it was made partially operational
in 1996, for its 50th birthday.

Yup. To make things "perfectly clear", I did not mean to imply that tubes
couldn't be used as digital devices. It was my impression, however, that
the tube bistate multivibrators which represented the 1's and 0's drove
relays in their plate circuits to actually produce the make-or-break
connections, if only for isolation purposes. It was also my understanding
that there might be less total components used in building solid-state
switches. And we must remember that many latterday tube computers used
such mechanical devices for memory as magnetic drums, most likely because
tube memory would have been so expensive. In our hypothetical example,
this would not be a barrier.

Righto! It was always my intention to get a bunch of tube portables going
in case of Armagedon.

Question: if we posit vacuum tube IC'S, what sort of plate and screen
voltages would we be looking at? And would we have developed miniaturized
capacitors and resistors as we have done on the substrates of IC'S?

I have also often owondered as to the practicability of making tubes with
externally-heated cathodes for use, say, in extremely hot
environments. But this is getting off-topic.

I realize given the development of solid-state devices in parllel with the
last days of tubes (idde., the Compactron), that it's difficult to get
into the mind-set of engineers but what lay behind my assertion that
uponbes were analog devices which provoked such a storm was this
question: were tube-designers thinking "digitally"? That is, is it valid,
as some here have speculated, that e we have ended up with tube-like
IC'S? or would the wonderful linearity of tubes running Class A have led
us to some new and interesting ways of using analog devices to accomplish
signal processing?

Also, would tube development have come to the point where low-voltage (3
volts, say) tubes would have been produced with low current-drain
filaments? Without this, such things of satellite development would have
been tough IMHO. (Although Arthur C. Clarke *did* outline in his 1945
"Wireless Age" paper a 10-watt transmitter for satellites using tubes that
he felq practical).

Ain't this fun?

In the late 70's there was a new class of tubes developed for automotive use
that worked well with 12 volts on the plate.

I'm not saying don't buy old stuff. If that's what you like
and it brings you pleasure, or status or whatever it is that
is conferred to you by the purchase, then do it. Just don't
kid yourself into thinking that you're making an investment
of a financial nature. That would be as silly as calling a
diamond ring purchased at a shopping mall jewelry store
an investment.

When you buy old junk, you are spending, not investing.
Once in a while you might get lucky and find that a market
has developed for something you own, but it would be
pretty ridiculous to pull your money out of stocks, bonds,
and what have you to buy a bunch of old junk.

Yeah, my little Leica IIIf, red dial, that I bought for about $98 used
is now worth 5 or 6 times that amount.

What's amazing, if you used to buy LPs when you were a kid, is what
they are worth nowadays... I've got crapola LPs from the 60s that are
worth a fortune nowadays...

Damn, wished I'd a-bought that Beatles album with the butchered pigs
on the cover... I saw it in the store right after release... $3.98...
passed on it...

Ah missed opportunities Bob -- I was in the Navy in Memphis in the early 50's and car salesman practically gave me a Tucker - I passed. My Father-in-law was offered Mel Fisher stock before Mel found the Atocha. My Mom turned down an offer to buy IBM stock in 1949!!! Ah well maybe I'll buy a HQ-180

Subject: HAM Licensing

Hello all -

I recently bought a sailboat that is equipped with an ICOM HAM/SSB. Needless to say, I want to learn to use this equipment properly and legally. Is there anyone online who would care to help me through the licensing requirements before I go on the air and make a fool of muyself (and irritate

a lot of HAMS) ?

Thanks,

M

Date: Wed, 17 May 2000 20:27:25 GMT
From: Dick Hughes
Subject: HAM Licensing

If you know of a ham radio club in your area (sometimes listed in the yellow pages) you can start by attending a meeting. If you don't, most Radio Shacks have books and other documentation regarding obtaining an amateur radio license. From your description of the radio it sounds like you will need at least a General Class license unless you want to limit your activity to 10-meters. I would worry more about the FCC than irritating other hams. Good luck to you.

From: WB3KUM/9
Subject: HAM Licensing

Your in luck, the FCC just relax one of the requirements.

There is two "beginner licenses", Novice and Technician

Technician is very popular, it allows someone full privileges in the the VHF, UHF and microwave amateur bands. It consist of a test of general radio and other theory, operating practices, and rules and regulations.

Novice, allows restricted privileges in the Short-wave band, 1 VHF band and 1 microwave band. It consist of a test of basic radio and other theory, operating practices, and rules and regulations. There is a 5 WPM Morse code test.

While no longer noted on your license, if a person holds a Technician license and passes the Morse code test, you obtain privileges for both novice and technician license.

General, allows full privileges on most of the portion of the 5 main short wave bands, plus the 3 added in 1979, and the one medium wave band inaddition to and the VHF/UHF/and microwave bands. I consist of Novice/Technician test, plus a couple of extra questions, same Morse code test.

Extra, full privileges. Very comprehensive test on all modes of operation, same code test

Contact the American Radio Relay League (ARRL) and www.arrl.org. They should be able to point you a club in your area.

Best of luck.

Dennis

From: General Mark Morgan
Subject: HAM Licensing

If you operate without a license I don't think you will "irritate a lot of HAMS" but you might piss off the FCC and find yourself in jail and paying a hefty fine. Go to WWW.ARRL.ORG on the WEB and learn what is necessary to get a ham license.

From: k5dh@raytheon.com (Dean Hemphill, K5DH)
Subject: Heathkit DX-40 filament circuit question

In the Heathkit DX-40 transmitter, the 6CL6 buffer amp tube (V2) is on a separate, isolated power transformer filament winding, while all of the other tubes and the terminal on the accessory socket are powered off of another filament winding. Why was it done this way? I have a DX-40 which is missing its power transformer, and I'm looking for some

kind of substitute unit. What would it hurt to add V2 to
the regular filament string, in the event I can't find a
transformer with two 6.3 VAC windings?

73,
Dean, K5DH
Visit my amateur radio web site at http://www.qsl.net/k5dh

Date: Wed, 17 May 2000 20:18:21 GMT
From: WB3KUM/9
Subject: Heathkit DX-40 filament circuit question

I would not recommended it. The reason this was probally done was the
transformer could not supply enough current for the final and all the
other tubes. This was placed on it's own transformer. If you can find
a replacement transformer with a higher current rating, this should
work, if not, you will need to locate a second transformer. Check all
the tube specs and check the filiment ratings and add them up. You
should not go over 50-70% of the transformers rating.

Date: Wed, 17 May 2000 13:06:24 GMT
From: k5dh@raytheon.com (Dean Hemphill, K5DH)
Subject: Heathkit parts needed

HEATHKIT PARTS NEEDED:

For DX-40 transmitter:
- Power transformer (or a suitable substitute).
- Plate current meter.

For VF-1 vfo:
- Frequency dial scale, in good shape with all markings intact.

For AC-1 antenna coupler:
- Front panel, in good shape with all paint and markings intact,
and with no extra holes or modifications.

For MT-1 transmitter:
- One medium-size satin finish knob.
- Glass window that goes in front of the VFO dial drum.
- Cabinet, rust-free with no extra holes drilled in it.
- Operator's manual with alignment and troubleshooting
information (a good photocopy would be fine). I have
the schematic, so don't need that.

From: "Bob Camp"
Subject: qurtz crystal suppliers in the USA

Even in OEM quantities the price of crystals in that range is 3 to 10X
the price of crystals at 10+ MHz. In large quantities the low
frequency parts are contoured in pipes. Done one at a time instead of
in pipes the cost is even higher.

You might do better to find some on the surplus market rather than
from a manufacturer. Another option depending on the equipment would
be to replace the crystal with a 990 KHz packaged oscillator of one
sort or another.

From: "Gary - KJ6Q"
Subject: Ranger I case screw rod substitute

You can also make your own out of properly sized all-thread, available
at most better equipped hardware stores - you cut the proper length,
get the proper round-head bolt for the outside, and splice both pieces

inside the case with the splice-nuts the also sell with the
all-thread... When finished, they look and work as good as the
originals...

The TV-7 military jobs are great for small signal tubes. It might take
a
special piece of equipment for testing final amp tubes.

The TV-7 does test low-power transmitting tubes like the 807 and 6146,
but it doesn't have the "guts" to test them at full output. Still, it
will identify ones that have really gone flat.

From: "Tom"
Subject: Suitable replacement for Ranger insulated VFO coupling

Despite the many warnings I received concerning this delicate part, last
night while removing the front panel, I broke it cleanly in two. Now I'm
looking for a suitable replacement, or was wondering if I can home brew
something out of glass epoxy circuit board material. Is flexibility of the
coupling an issue here, or is it merely insulation of the VFO shaft? This
is my first foray in restoring an old piece of gear, so everything is a new
experience. Frustrated, but having fun.....Tom K3GM

Date: 17 May 2000 16:36:31 -0700
From: K6RB
Subject: Suitable replacement for Ranger insulated VFO coupling

Tom,

I had the brittle phenolic break in one of the Rangers I restored. I took the
metal hardware and drilled out the rivets. Then I cut a piece of heavy gauge but
flexible plastic about 1" square. Using number 4 screws and nuts, I connected
the coupling hardware to the plastic and reassembled it. It worked better than
the original. The key function is to insulate the shaft but flexibility is
important for smooth dial drive.

Subject: Tubes for SB200?

Hi and thanks for reading this.

I'm about to replace the 572B's in my Heath SB200. Does anyone have
any experience or recommendations as to tube manufacturer? RF parts

lists tubes from Taylor, Cetron and Svetlana. I was initially going to buy the Svetlana, but wonder why the Cetrons are more expensive? Any better.

Any suggestions are appreciated.

Thanks,

Jim, WA1ZUH

Easiest way is to tighten the spring that holds tension on the string.

First thing to do is lube the tuning cap and pulleys. That will very
often fix a slipping dial string. If that doesn't do it, you can try
applying
some rosin or "dial cord dressing" that is available from Bill Turner
over on rec.antiques.radio-phono. Finally option: you can replace
the string. I have found that high test fishing line works well (not

monofilament stuff). When you replace the cord, if the original cord was wrapped around the drive shaft 3 times, wrap it 4 or 5 times with the new string. That will absolutely fix any problem you have with a slipping dial cord.

If that's a Ten-Tec Century 21 it's most likely not the "string". If the symptom is that the pointer will not return all the way to the left it's the elastic bun gee cord inside. If the pointer moves, then stops, then moves again and the frequency does not run up/down and the tuning is jerky then it's in need of a PTO rebuild. I just replaced the bun gee on both my 540 Triton IV and Argonaut 509 plus did the PTO rebuild on the 509. Plays like a new radio now and tracks great. Ten-Tec sells the rebuild kits for $20 to

do your own or rebuilds them at the factory for +/- $100.

I'd phone Ten-Tec Service Department and speak to Garland Jenkins. He'll
help you and he's forgot more about these vintage Ten-Tecs then anyone else
knows.

One other thing, Rich.
Before you try anything, draw a clear diagram of exactly how the string runs from start to
finish, including the spring and all of the pulleys.

Not really. The first generations of computers used tubes. ENIAC, the first
full scale general purpose digital electronic computer, used 18,000 of them. By
the mid '50s, the giant SAGE system used 44,000 tubes.

Spread spectrum was invented in the '40s. One of the the coinventors was Hedy
Lamarr (yes, THAT Hedy Lamarr).

One of the best kept secrets of WW2 was the proximity fuse. This was a small
radar set that was installed in the nose of all types of artillery shells, and
would detonate the shell when it neared an aircraft or other large, conductive
target. Each fuse used four subminiature tubes, and had to withstand severe
conditions (months of storage, use in all climates, 20,000 G shock, no
adjustments, and near-zero chance of false detonation). All of these problems
were solved, and the fuses were produced by the millions.
>

Perhaps.

Here's another thought:

Could the transistor have been developed without the tube coming first?

From: emoore@windemullerelectric.COM (Eric Moore)
Subject: FS: Hallicrafters HT-33A

For Sale: Hallicrafters HT-33A amplifier, homebrew antenna relays and original manual (manual is in poor condition). I believe this is about 1475 Watts or so input, into a single PL-172A tube with a built-in power supply. Unit is in great shape and will be packed with care tube and

relays packed in separate package. I am going to the Dayton Hamvention
so buyer could arrange pick-up at the KOA just north of the Hamvention
and save on shipping! Or I could ship to you. If shipped, buyer to pay
all of shipping and $50 towards packing material. I am asking $350 for
this unit and have digital pictures available upon request. As with all
electronics, there is no warranty

Thanks for looking
73,
Eric

Where did you do your measurements to determine high voltage is present?
Across the capacitor bank, across the tube plates? You said you purchased
it from an estate sale...are the switch contacts clean (I had literally no
power from my HT-37 when I first got it, and after dismantling it and
looking under every rock, it was a very dirty band switch contact that was
the culprit....).

>supposed to do so I can't tell if I have a problem there.
>
>My basic question is could a bad tube cause this problem? My
>experience with tubes is very limited but growing.

BE CAREFULL -- THERE ARE LETHAL VOLTAGES LURKING AROUND IN THERE. It seems
that the signal path is getting to the first tube. I'd check that the
voltages at the tube itself are correct. If they are, then your problem
might be in the metering circuit. If they aren't, then you meter is
probably alright, and you're lost HV somewhere along the line. Start
backwards from the tubes, or forewards from the transformer output, and

measure voltages at various points. Sooner or later you'll find a place
where the voltage is gone. Use the schematics and do it systematically.

I'll try to find my SB-200 manual, but since we just moved into our house
(last Dec), we still have about 50 boxes in the attic. I suspect someone
else on this NG will have a manual handy. BE CAREFULL!!

You are probably getting no replies for two reasons. Firstly you are asking in the wrong place - its unlikely that a US-based ng will know much about a piece of UK equipment - try asking in UK groups - particularly the uk vintage radio list (details on request). I can suggest an excellent article in Radio Bygones for instance. You will probably find someone who can supply a copy of the manual - though I don't have one myself.

Secondly, anyone suggesting modifying any classic Rx, such as the CR100, is liable to get ignored, as the days of modifying things like this "to make them better" are for most of us long forgotten. This is a piece of history you have - not a pile of bits to be messed with! You will find that if you return it to its original working state - perfectly feasible - then you will have a reasonably good receiver that will give quite pleasing performance on the lower HF bands. It will not be brilliant on SSB - but then it was never designed to be.

You will also find that a fully restored CR100 has some value - and you can sell it or swop it for something else, should you wish to do so at some future date. Modifications will only reduce its value these days - regardless of how clever they may be, or how much the performance has been improved.

>
> --
> Regards
> Ray

Ray,

browsing this ng I found the following webpage that gives quite a reasonable picture of the T-195 front panel:
http://web2.airmail.net/fledda/radio_GRC19.html

Looking at my T-195 manual, the rh meter certainly is scaled in VU.
Can't tell what size it is, but it looks to be identical in style and
type to the left hand one.

If you find one, please let me know where you found it, as I need one
for my T-195 as well!

If you also know where to get plugs/sockets for the internal modules, or
alternatively "board extenders" - I would be glad to hear about those
too. Its virtually impossible to work on the set with power applied and
the modules in place.

From: "Mr. Wires"
Subject: What's the mystery tube?

Can anyone identify what kind of tube this is & what it was used for?

It's marked "JAN-CIM-15E", & carries the "Eimac" brand. Markings
(ratings?) stamped on one side of the box read:

Ep = 1000 v

Ip = 0.5 ma

Eg = "46" is written in pencil here

"Peak a - 46" is also written in pencil at the top of all these
markings.

I have posted pictures of the tube & box at:

http://members.xoom.com/_XMCM/studio_tech/tube.html

I am guessing that this is some kind of transmitter tube.
I have a number of these NIB. Are these only good for
target practice?!

Thanks,

Mr. Wires (post here or delete "NOSPAM" to e-mail)

From: j.m.franke@larc.nasa.gov (John M. Franke)
Subject: What's the mystery tube?

The 15E is a VHF/UHF triode. It was used as a pulsed oscillator (single
or push-pull) or amplifier in many World War II IFF systems including the
BN. It found application in airborne intercept radar transmitters and
jammers.

Interesting, I wonder if theres anything on the web, must take a look.
I'm always interested in reading about the early machines, from Collosus
onward - although Collosus wasn't a _real_ computer as we understand it.

I'm currently playing about with an emulator of Cambridge Universitys EDSAC
computer of 1949 (probably the worlds first _practical_ computer) - it plays
a mean game of tic-tac-toe complete with the original graphics ;-)
I wonder if there's an ENIAC emulator anywhere?

No, the first computers were fully electronic - no relays, relays are
way too slow for this type of thing! Tommy Flowers who built the
first such device in 1943 built it to replace a machine that was too
slow because it used relays. Relays couldn't keep up with the 25,000
bits per sec of the tubes!

Er, that was the late 50's, not late 70's.

My father's 58 Edsel had this kind tubes in its radio.

I went to work for IBM as a customer engineer just after their computers
went all solid state, but I used to have some of the plug in modules
from one of the tube type models. Used tons of 12AX7s, but no relays.
Some tube type computers used magnetic core storage.

Mike they did not use relays to produce the 1/0s. A diode tube will
conduct and not conduct giving you the 1/0 that is needed for the
array..

correction - the first computer in a modern sense was designed
by charles babbage, his wife, ada agusta countess of lovelace
wrote programs for it - it was mechanical in its entirety.

one could also say that the frieden calculator and other such
things were "computers" hence I think it makes sense to limit
it to "programmable" computers. there were also analog
computers including mechanical differential engines that were

programmable long before there were digital programmable
computers. The norton bombsight is an example of a rather
primitive programmable analog computer that is mechanical.
some early flight simulators were also mechanical

Yes, I found this out by trial and error while replacing the
power transformer in my DX-35. From my notes on the
project:

When I first fired it up, only the driver tube lit up, and
after a while it glowed brightly so I shut it off. I found
that I needed a jumper from one side of the 6.3V TB to a
common point on the aux power socket. But I also discovered
that the driver looked like it was wired wrong. The
cathode, suppressor, one side of the filaments, and filament
supply were all connected together and to a resistor which
went to the grid and also to the HV from the osc. I
separated the cathode, suppressor, one side of filaments and
fil supply and low side of the grid leak, and took them all
to ground. (The filament ckt needed a ground side
somewhere.) I moved that HV lead to the HV coming to the
driver's plate/screen ckts; figuring it was a continuation
to the osc. When I powered it again, the driver's plate got
red hot after 20 sec or so. Something's still wrong for
sure. I was also surprised that the driver's plate was
connected directly to the 600 VDC supply with no dropping
resistor.

10/18/97

I put out a plea for a schematic on the net (newsgroup) and
got one from Edward Zeranski, plus most of the manual. This
shed light on things. There actually were no wiring errors.
The oscillator tube and buffer (driver) are connected in
series, so they each receive about 300 VDC. Because of
this, the buffer requires a separate filament supply, so it

doesn't short out the plate supply arrangement. I added a 12 volt transformer to the top of the chassis and rewired the 12BY7 buffer for 12.6 V filament voltage. First, I tested the transformer with 400 VDC pri to sec and sec to ground to make sure it could handle being connected to the cathode at about 300 VDC. It was OK.

Apparently my error didn't destroy that tube.

Watch out for the sharks!
I'll bet you've already had a dozen guys offer to buy it
for a few bucks.... Tell them "no thanks."

You have a very valuable set used by Airborne Pathfinder troops
during WW-II. It was part of the system known as the
Rebecca-Eureka navigation set. The Pathfinders went in
first to the drop zones and set up these "Eureka" sets.
The "Rebecca" radar set in the aircraft carrying the
main body of airborne troops then sent
a pulse to interrogate the PPN-1. The PPN-1 responded with
a pulse and the "Rebecca" set in the aircraft displayed
bearing and distance on a CRT. I have the CRT,
but have never been so fortuante as to find a PPN-1.

Outstanding find! I sure wish I could afford one for
my collection. The last one I saw on Ebay was in
excellent/complete condition and sold for over $1000.

Jealous but kind regards,
Dave Stinson AB5S

The TV-7 does test low-power transmitting tubes like the 807 and 6146,
but it doesn't have the "guts" to test them at full output. Still, it
will identify ones that have really gone flat.

Hi and thanks for reading this.

I'm about to replace the 572B's in my Heath SB200. Does anyone have any experience or recommendations as to tube manufacturer? RF parts lists tubes from Taylor, Cetron and Svetlana. I was initially going to buy the Svetlana, but wonder why the Cetrons are more expensive? Any better.

Any suggestions are appreciated.

Thanks,

Jim, WA1ZUH

>(V2) is on a separate, isolated power transformer filament
>winding, while all of the other tubes and the terminal on
>the accessory socket are powered off of another filament
>winding. Why was it done this way?

The DX-40 RF section has three stages: xtal osc, buffer/multiplier and final. For some reason the designers set up the oscillator and buffer HV to work in series. Look carefully at the schematic - you'll see that the plate circuit of the buffer stage has full B+ on it, and the cathode of the buffer stage goes to the plate circuit of the xtal oscillator! This techniques works if the stages draw about the same plate current. The only real problem with this idea is that the cathode of one stage is hundreds of volts above ground, and most tubes don't have enough heater-cathode insulation to stand the strain. In the DX-40, the separate isolated heater winding takes care of this problem because it is not grounded.

This was probably done so that a single rectifier tube and B+ could be used, for economy. The screen modulator runs off a a tap on the bleeder string, which is OK for a few mills. The special power transformer was no problem for Heath 40 years ago. They were such a big customer that they would simply write up a transformer or choke specification and their supplier (Stancor, usually) would tool up to make them at a very low price.

> I have a DX-40 which
>is missing its power transformer, and I'm looking for some
>kind of substitute unit. What would it hurt to add V2 to
>the regular filament string, in the event I can't find a
>transformer with two 6.3 VAC windings?

The buffer 6CL6 would probably not last too long because of the excessive heater-cathode voltage (at least half of the high B+) that it would be subjected to.

Here are some ideas:

1) Hunt around for a junker DX-40 or maybe a DX-35 that has a good transformer.

2) Use a replacement with one heater winding, and install a separate small 6.3 volt filament transformer for the buffer stage.

3) Revamp the power supply to use a common transformer and an "economy (bridge) rectifier. The "economy" circuit gives two B+ voltages, the low one being about half the high one. (The DX-40 gets about 600 volts out of its power supply by

using a 1420 VCT transformer, 5U4GB fullwave rectifier, and a choke input filter. A replacement may not be easy to find!). Then revamp the oscillator/buffer circuits to run in parallel on 300 volts. This change is not too complicated, and is easily reversed if the right transformer ever shows up. I can give more details on how to do it if you decide to go this way.

If you decide on 3), you'll probably need to use silicon rectifiers and add another filter choke and some electrolytics for the low B+.

What do you expect these days....all that stuff is classic gear and if its mint..guys will pay the price.

I just bought a like new hallicrafters SX100 for $375 and I thought I got a deal.

I bought a 1965 corvette sting ray about 15 years ago and at that time I paid $ 17,000 and now its worth $30,000 with the new paint job.

Look at it this way...its like money in the bank when it comes to classic items.

You may want to try "Antique Electronic Supply" at
"http://www.tubesandmore.com/". I was able to find
the 11-Pin power supply plug that Heath used on
a lot of their equipment. You may have to give them
a phone call, their on line catalog is a little
hard to search.

I think it is a case of too much money laying around. If I really wanted something I would spring for it, but I think some of those prices are hit or miss. You may just catch the collector (rich) that wants something and goes for it may go for years as the baby boomers and I am one, start to retire and have the time to work on and operate some of this older gear.

Thanks for the inputs. I see also that Hammarlund refers to the speaker for the HQ-150 as the "8 inch PM speaker". I will keep my eye open for one of those. This is my first 'boatanchor', unless I count the Hallis I had as a kid.

Hello folks!!
Just wanted to let everyone know that there has been major improvements to
the world wide voice & Text chat system for hams!! There is now the
provision for private chat rooms. The idea is that you wait for someone to
arrive in the main chat then go to a private chat with them if you wish. The
audio in the system rivals that of anything currently available and also
supports a text chat on the same screen. Use the system to set up skeds,
check the muf on a freq, meet new hams, have meetings or just plain ragchew.
Go to the url here to directly enter the chat
http://home.earthlink.net/~mitbr/AmateurRadioChat.htm
If no ones there when you arrive simply hang around for awhile while you
surf the net some one will come along!! Spread the word folks .
Tim Breckon-- --

Message-ID: <01bfc1fb$5e344860$9811460c@default>
Source record: 66412

Your radio might not be a ham transceiver but a marine transceiver !! If that's the case, go to your local marina or marine supply house and the folks there ought to be able to guide you to getting an operators permit for a marine radio. I'm no expert, but getting a license to operate radio gear in aircraft is about as simple as filling out a form and I imaging that the process for marine gear is probably about the same.

Getting a ham license is another matter. Because of the license class restructuring that took place in April, the new study material for these new license classes wont' be available until June. The test for a Technician license is fairly easy if you study but you probably won't be able to just walk in, take it and pass. Radio Shack and the ARRL produce some good study guides just be sure that what you buy applies to the new testing pool. The FCC has de-emphasised some of the more technical stuff and put more emphasis on operating parameters, rules & regs, etc.

Hope this helps. Have fun with your new boat....and radio !!!

2360. combat radio set

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-19 00:00:00 UTC
From: jb <w9npi@arrl.net>
Message-ID: <39249B5B.72F22D3D@arrl.net>
Source record: 66413

Wonder if you might have an idea about a radio set that I have. It is in a water-tight knapsack, with 6-foot tall folding antenna (looks as if it
were cut for 220 mhz) that has a foothold for quick planting in the ground. There are two units--the first is a small vibrator power supply, PPIIA/PPN-1 CFJ that works on 6VDC. The other is a 4ï¿½ x 7 ï¿½ï¿½ x 2 ï¿½ï¿½ transceiver with a watertight headphone jack, a rubber-sealed toggle switch for "test", and a covered button labeled "CW". There are two rotary switches with 5 channels each for the transmitter and receiver. There is a cylinder running through the middle of the chassis, terminated by a red screw top in the back, marked "dest"--possibly for a destructive charge to stymie whoever captured it. Its plate identifies it as: * RT44/PPN-1A, 3483 CFJ, 2141-MPD-44.

Tube lineup: Rcvr: 9002 9002 9001 6AK5 9002
Xmtr: 9002 6AK5 9001 9002 9001

From the tube types, it may be that this was built for the Korean War, rather than WW IIï¿½even though the old construction techniques and jungle-proof shellac are used.

Any info on this set would be appreciated.

As far as I can tell, they are error autoposts from an NNTP, (network news transfer protocol) server, in other words a newsgroup server which is having fits...you see, These Usenet newsgroups on the internet are not on one main server, it is made up of a network of thousands of different providers, one or any of which is having a problem posting a certain message or messages.

It is the same 'robot message' you may get when you try to send mail to a bad Email address. You could if you wish, notify the provider listed in the message of the offending server that there is a problem.

I just ignore it and move on to the next message. ;o)

Subject: $1000+ for an HQ-180!

I think it is a case of too much money laying around. If I really wanted
something I would spring for it, but I think some of those prices are hit or
miss. You may just catch the collector (rich) that wants something and goes
for it may go for years as the baby boomers and I am one, start to retire
and have the time to work on and operate some of this older gear.

From: k8bvj@webtv.net (Jack Bucchieri)
Subject: $1000+ for an HQ-180!

What do you expect these days....all that stuff is classic gear and if
its mint..guys will pay the price.

I just bought a like new hallicrafters SX100 for $375 and I thought I
got a deal.

I bought a 1965 corvette sting ray about 15 years ago and at that time I
paid $ 17,000 and now its worth $30,000 with the new paint job.

Look at it this way...its like money in the bank when it comes to
classic items.

Jack

> Mel Fisher stock before Mel found the Atocha. My Mom turned down an offer to buy
> IBM stock in 1949!!! Ah well maybe I'll buy a HQ-180

Anything that has tubes, tires, or floats is NOT an investment. At best it is
speculation.

It's all junk.

I'm not saying don't buy old stuff. If that's what you like
and it brings you pleasure, or status or whatever it is that
is conferred to you by the purchase, then do it. Just don't
kid yourself into thinking that you're making an investment
of a financial nature. That would be as silly as calling a
diamond ring purchased at a shopping mall jewelry store
an investment.

When you buy old junk, you are spending, not investing.
Once in a while you might get lucky and find that a market
has developed for something you own, but it would be
pretty ridiculous to pull your money out of stocks, bonds,
and what have you to buy a bunch of old junk.

Subject: combat radio set

Wonder if you might have an idea about a radio set that I have. It is in a water-tight knapsack, with 6-foot tall folding antenna (looks as if it
were cut for 220 mhz) that has a foothold for quick planting in the ground. There are two units--the first is a small vibrator power supply, PPIIA/PPN-1 CFJ that works on 6VDC. The other is a 4 x 7 x 2 transceiver with a watertight headphone jack, a rubber-sealed toggle switch for "test", and a covered button labeled "CW". There are two rotary switches with 5 channels each for the transmitter and receiver. There is a cylinder running through the middle of the chassis, terminated by a red screw top in the back, marked "dest"--possibly for a destructive charge to stymie whoever captured it. Its plate identifies it as: * RT44/PPN-1A, 3483 CFJ, 2141-MPD-44.

From: "Ron Ostman"
Subject: Eldico TR 75 TV5

I have a TR-75 TV that is operational and looks real good. If I can borrow a digital camera, I'll try to get some pics - remind me and I'll send them to those that request them. (Be patient!) I also have the earlier TR-75 (no cover, all "surplus" parts). This was my dad's first transmitter and I rebuilt it when I was a Novice in 1974. It has more "character" than the covered-up 'TV version! I would like to find the matching modulator that was available - MD-40, I believe. Any leads? Otherwise , I'll homebrew one.

73,

Ron, W&#65533;NYQ

From: "Bill Fairbanks"
Subject: HAM Licensing

Your radio might not be a ham transceiver but a marine transceiver !! If that's the case, go to your local marina or marine supply house and the folks there ought to be able to guide you to getting an operators permit for a marine radio. I'm no expert, but getting a license to operate radio gear in aircraft is about as simple as filling out a form and I imaging that the process for marine gear is probably about the same.

Getting a ham license is another matter. Because of the license class restructuring that took place in April, the new study material for these new license classes wont' be available until June. The test for a Technician license is fairly easy if you study but you probably won't be able to just walk in, take it and pass. Radio Shack and the ARRL produce some good study guides just be sure that what you buy applies to the new

testing pool. The FCC has de-emphasised some of the more technical stuff
and put more emphasis on operating parameters, rules & regs, etc.

Hope this helps. Have fun with your new boat....and radio !!!

>Mark W4UDX - Proud owner of a Drake B-line
>Drake fan for life......

Hmmm...dont' know about that one. If I was running Drake I would not resume
manufacturing amateur equipment just because a bunch of hams signed a petition.
Like it or not, Drake is in business to make a profit, just like any other
business. I guess the question is, can Drake compete with such companies as
ICOM, Kenwood and the like. I too would like to see them start back into making

amateur radio products, but I don't think I would invest my life savings in
their stock if they did. That market is not very large and is very competitive
right now.

That's just my 2 cents worth.

Subject: Heathkit DX-40 filament circuit question

In article ,
k5dh@raytheon.com (Dean Hemphill, K5DH) writes:

>In the Heathkit DX-40 transmitter, the 6CL6 buffer amp tube
>(V2) is on a separate, isolated power transformer filament
>winding, while all of the other tubes and the terminal on
>the accessory socket are powered off of another filament
>winding. Why was it done this way?

The DX-40 RF section has three stages: xtal osc, buffer/multiplier and final.
For some reason the designers set up the oscillator and buffer HV to work in
series. Look carefully at the schematic - you'll see that the plate circuit of
the buffer stage has full B+ on it, and the cathode of the buffer stage goes to
the plate circuit of the xtal oscillator! This techniques works if the stages
draw about the same plate current. The only real problem with this idea is that
the cathode of one stage is hundreds of volts above ground, and most tubes
don't have enough heater-cathode insulation to stand the strain. In the DX-40,
the separate isolated heater winding takes care of this problem because it is
not grounded.

This was probably done so that a single rectifier tube and B+ could be used,
for economy. The screen modulator runs off a a tap on the bleeder string, which
is OK for a few mills. The special power transformer was no problem for Heath
40 years ago. They were such a big customer that they would simply write up a
transformer or choke specification and their supplier (Stancor, usually) would
tool up to make them at a very low price.

> I have a DX-40 which
>is missing its power transformer, and I'm looking for some
>kind of substitute unit. What would it hurt to add V2 to
>the regular filament string, in the event I can't find a
>transformer with two 6.3 VAC windings?

The buffer 6CL6 would probably not last too long because of the excessive heater-cathode voltage (at least half of the high B+) that it would be subjected to.

Here are some ideas:

1) Hunt around for a junker DX-40 or maybe a DX-35 that has a good transformer.

2) Use a replacement with one heater winding, and install a separate small 6.3 volt filament transformer for the buffer stage.

3) Revamp the power supply to use a common transformer and an "economy (bridge) rectifier. The "economy" circuit gives two B+ voltages, the low one being about half the high one. (The DX-40 gets about 600 volts out of its power supply by using a 1420 VCT transformer, 5U4GB fullwave rectifier, and a choke input filter. A replacement may not be easy to find!). Then revamp the oscillator/buffer circuits to run in parallel on 300 volts. This change is not too complicated, and is easily reversed if the right transformer ever shows up. I can give more details on how to do it if you decide to go this way.

If you decide on 3), you'll probably need to use silicon rectifiers and add another filter choke and some electrolytics for the low B+.

Yes, I found this out by trial and error while replacing the power transformer in my DX-35. From my notes on the project:

When I first fired it up, only the driver tube lit up, and after a while it glowed brightly so I shut it off. I found that I needed a jumper from one side of the 6.3V TB to a common point on the aux power socket. But I also discovered that the driver looked like it was wired wrong. The cathode, suppressor, one side of the filaments, and filament supply were all connected together and to a resistor which

went to the grid and also to the HV from the osc. I separated the cathode, suppressor, one side of filaments and fil supply and low side of the grid leak, and took them all to ground. (The filament ckt needed a ground side somewhere.) I moved that HV lead to the HV coming to the driver's plate/screen ckts; figuring it was a continuation to the osc. When I powered it again, the driver's plate got red hot after 20 sec or so. Something's still wrong for sure. I was also surprised that the driver's plate was connected directly to the 600 VDC supply with no dropping resistor.

10/18/97

I put out a plea for a schematic on the net (newsgroup) and got one from Edward Zeranski, plus most of the manual. This shed light on things. There actually were no wiring errors. The oscillator tube and buffer (driver) are connected in series, so they each receive about 300 VDC. Because of this, the buffer requires a separate filament supply, so it doesn't short out the plate supply arrangement. I added a 12 volt transformer to the top of the chassis and rewired the 12BY7 buffer for 12.6 V filament voltage. First, I tested the transformer with 400 VDC pri to sec and sec to ground to make sure it could handle being connected to the cathode at about 300 VDC. It was OK.

Apparently my error didn't destroy that tube.

You may want to try "Antique Electronic Supply" at
"http://www.tubesandmore.com/". I was able to find
the 11-Pin power supply plug that Heath used on
a lot of their equipment. You may have to give them
a phone call, their on line catalog is a little
hard to search.

Also take a look at http://www.computer50.org

They have built a replica of the "Small Scale Experimental Machine" which was
the prototype of the Manchester Mk1 computer. The SSEM ran its first stored
program on 21st June 1948, You can download an emulator and try programming
it yourself... 32-bit registers BTW ;-) We are now coming up to the 50th
anniversary of the first computer sold to a private customer (sold in 1951).
I think by now we would have had fairly complex computers, even without
transistors, but they would have filled whole buildings!

As far as I can tell, they are error autoposts from an NNTP, (network news
transfer protocol) server, in other words a newsgroup server which is having

fits...you see, These Usenet newsgroups on the internet are not on one main server, it is made up of a network of thousands of different providers, one or any of which is having a problem posting a certain message or messages.

It is the same 'robot message' you may get when you try to send mail to a bad Email address. You could if you wish, notify the provider listed in the message of the offending server that there is a problem.

I just ignore it and move on to the next message. ;o)

Subject: WTB Knobs Heath SB220

Hi,

I am looking for original knobs for my SB220. I need at least one large knob and two small knobs.

Subject: First-hand account: POW Radio

I read in Clinton DeSoto's book _200 Meters & Down_ an account of a
young man somewhere in West Virginia I believe, who was very poor and
completely fabricated a receiver and transmitter from scratch, including
making his own tubes. Does anyone know anymore about this, or is it just
a good story? I can't imagine how anyone could make their own tubes
without the aid of a vacuum pump, and if you were well-off enough to
have one of those, why not just buy tubes?

From: tubepwr813@aol.com (TubePwr813)
Subject: FS: National SW-3

National SW-3 using the 32 and 33 tubes....this rig is clean and works well. It does have a few items to note....a "!@#$#@!#$" put a heaphone jack in the lower right corner of the rig (removed). I carefully filled it and texture painted the patch job, which matches the original texture paint very well....The repair job is virtually not visible as pictures show. One of the coil sockets was cracked...just a bit and was repaired. An original National coil set for 80 meters is included with the rig. Also, I believe I have 4

empty coil forms, maybe 6..... made by a fellow in IN....from Delrin...that will go with the set for your winding pleasure. These are very nice quality coil forms. This is really a neat radio. The best regen out there....(my opinion) Unfortunately the doghouse power supply does not come with the set. I used it with a little hombrew power supply that I wish to keep. Selling Price for the above $400 Prefer pickup, but will ship. Shipping is additional. Digital photo can be supplied.

Thanks,
Chris

Subject: Goodby Xsistors !!!

Bismarck Wichy (wd0hco@ev1.net) wrote:
: Have a good response for you... basically Nuvistor development would have
: continued. During the 60's, there was all sorts of interesting research
: going on in making smaller and smaller tubes. Those of us around know that
: many companies made small battery powered AM and FM tube radio sets.
:
: The end of tubes was caused by (1) the fact that transistors could be
: produced cheaper and faster and (2) they would withstand greater shock than
: glass or metal tubes.
:
: And so tube development and research stopped and the solid state era
: began...
:

There were a number of reasons that solid state devices overcame tubes,
but that process is still incomplete. The CRT still dominates the
TV and computer video market and we are well into 50 years of solid
state devices.

The early value of transistors was low power. Case in point was the
first general commercial use of transistors: hearing aids.

However, the value of solid state devices soared with the introduction of
monolythic integration (integrated circuits). Our computational
devices were doomed to be slow and stupid regardless of how complex
a transistor or tube circuit could be built. The propogation delays
of discrete components in a circuit that has 25,000 active elements
completely obviates the value of such complexity due to the sluggish
transit of electrons from element to element. Without the development
of the transistor, which largely lead to the developement of the IC,
we would be stuck in our ability to compute. The computers have
been our enabling tools for so many other advances, that the
technological revolution of the past 25 years would have been
just a lazy stroll in the sun.

Subject: NCX-500 info Wanted

Hi,

Just got a complete NCX-500 xcvr with its ps at a flea today for the
princely tab of $20. No manual, though. Uses pair of 6JB6 in the PA.

Need info on where to look for a manual, or will go to W7FG for a
copy to make do with. Looks like it'll work. Been in a barn for many
years, dusty, but it's all there, original knobs too.

Can someone point me in the right direction?

Flames directed to me personally...PLEASE...I can handle them. CNN.com
has a question posted just for today on their website and I challange
everyone to please vote on this issue. It is concerning existing gun
laws and if there needs to be more. As you know, CNN tends to lean in
one direction. Right now, the balance on this vote seems to be leaning
far left. Folks, if they take away our guns...what about our
frequencys? Thank you for the bandwidth! John

I'm not quite sure if there is a correlation between gun control and taking
away our frequencies, aside from the general issue of government control.

I work for a company that manufactures security cameras and survelliance
systems. At our company meeting this week, we were presented with some of
the reasons the future looked good for the industry.
The first was an increase in crime. No big news there. The second reason
was the American public's willingness to give up a lot more privacy for
safety. There's a dangerous undercurrent here. Americans are willing to
give up their Constitutional right to own guns for a relatively small amount
of increased safety, and also willing to give up their privacy for a
relatively small amount of increased safety.

As for CNN, I doubt wheather they'd show a favorable pro-gun poll if it came
to that. I don't trust the media.

Wasn't the American Revolution fought to eliminate the 'King' and Big Government?

Wasn't the Battle of Lexington and Concord fought to prevent the government from seizing colonials' guns?

As a side note: Smith and Wesson is now a British Company and they are still trying to disarm the US.!!

Do we not want to be a free people?

President Kennedy of Blessed Memory is quoted as saying to the effect: "Everytime one law is passed someone loses some freedom!"

Today we want a King and Big Government. Let's revert to the 1775 government system!!

The gun issue is easily solved. A constitutional amendment approved by 37 states will rewrite the 2nd amendment so the the right "...may be infringed..." [we already have 20,000 laws that 'do not infringe' <satirically stated>].

But seriously, if the US wants to restrict gun ownership simply revise the constitution! The Founding Fathers provided a means to do so and these means have been frequently used.

Finally, WHAT HAS THIS TO DO WITH HAM RADIO?????

Moot - we lost our ability to protect ourselves with weapons from a tyrranical gov't long ago, or we'd have even better things like the fouders would have thought wise. The only reason people still have any guns, is that they have control of our minds.

Subject: What If .. No xsistors

In school, in an analog ckt analysis class, our professor pointed out that
the first analog tube computer's results were instantaeous (as he would say
"for all practical purposes") compared to today's fastest digital computers.
O'scopes were used for viewing the results of an integration or differential
by using different types of amplifiers.

He and I were taking a smoke break once and were talking about how things
would be different if digital computers never took off like they did.

He pointed out that, just because something is widely used doesn't meant it
is the best way...

Maybe most computer designers are like me; hated doing calculus and would
rather deal with logic circuits
-Dave

I thought about FEDs as a possibility, but have rejected it for now. I even
thought about micromachines as a possibility without semiconductors. In
both cases the physics of semiconductor materials is too important for
operation. Perhaps some microfluid designs would have been developed.
Another possibility is a vacuum IC. That is, a large number of small
components in a vacuum chamber. It is interesting how the success of
current optical systems hing on semiconductors right now.

From: "D. S. Platt" <jeepp@erols.com>
Subject: WTT HP Dig. scope for TEK

I have a virtually NIB condition HP 54600A 2-channel, 100MHz digital scope. This is the one with the all the automatic measurement cursors, etc. It comes with the accessory pouch, probe set, operating and maintenance manual, programming manual, floppy disk, and 2 HP 54658A Measurement/Storage modules that mount on the rear of the unit. I'll even add a serial cable. I'm looking to trade this digital unit for several older analog units (I'm from the old school). I'll accept offers of TEK 465B's and 475A's in trade. Minimum would be 2 465A's and one 475A. Ex-military 465's are not acceptable. Trades must be in similar condition, but don't have to be in cal. As always, I'm open to dialog (hi). I can scan and email the HP catalog page if someone doesn't know the unit, already.

Still looking for the elusive Hallicrafters HT-20 and HT32A/SX-101A combo.

Thanks for the read. de K3HVG

All do respect to Dale, it was not the S-200 which matched the HQ-145, 160, 170 and 180. The HQ-150 speaker was the last of the "old style", as was the radio. Why the out of sequence numbering I don't have a clue. It was all metal, dark grey or black and just like the speakers for the HQ-129X, 120, 140. The one main difference is that it has a red Hammarlund logo near the top.

2387. Where to get Lafyette HE-30 repaired?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-19 00:00:00 UTC
From: Doug Person <w4dxv@attglobal.net>
Message-ID: <392574a9_2@news1.prserv.net>
Source record: 66440

I've had a old Lafayette HE-30 sitting on the bench for a while now. Thought that I would have the time to get it back in operating condition but probably not. My job just demands to much. Wonder if any of you can recommend a good place to send an old all-tube early sixties radio for servicing? I'm more interested in a high quality job than an inexpensive job. This was my novice receiver in 1962.

Thanks,

Doug -- W4DXV

2388. FS: Kenwood VFO-120

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-19 00:00:00 UTC
From: Doug Person <w4dxv@attglobal.net>
Message-ID: <39257602_4@news1.prserv.net>
Source record: 66441

External VFO Matches TS-120 and TS-130. I think this VFO will also work with the 520/530 and 820/830.

I have two. Both in good condition. One is complete with cable and book. The other has a copy of the book and you'll have to make your own cable - requires 2 5-pin standard DIN plugs - easy!

Kenwood VFO-120 with book and cable $100
Kenwood VFO-120 with copy of book, no cable $80

tnx es 73,

Doug -- W4DXV

Message-ID: <39267C0B.41604423@erols.com>
Source record: 66311

I have just acquired a very nice RCA mfg. RCAF model AR2 HF aircraft receiver. I have the book but its missing page 9 thru about 19. Anyone with info on this receiver that could help, I'd appreciate a message. Thanks.

2405. FT/FT Valiant parts

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-20 00:00:00 UTC
From: "D. S. Platt" <jeepp@erols.com>
Message-ID: <39268069.7ADC2CE4@erols.com>
Source record: 66312

I have just disassembled a good condition Viking Valiant I transmitter.
OK, OK..I needed some spare iron for my other 3. I have the following
to potentially dispose of if someone is in dire need to get one fixed up
and on the air.

Complete VFO assy (complete box, no vernier) (exc.)
VFO band cam
Front panel (usable, no dings or dents; markings fine, needs periphery
paint)
Case (no dings or dents but requires paint job!)
Tank circuit coils. (load and tune caps not available)
Plate choke
Meter and meter can (already had a few)
VFO calibration dial and bezel (dial is fine, bezel could maybe use
paint)
Knobs (I can spare 3-4 only!)
866's (you mean you don't use 3B28's?)
Some switch wafers (except pa loading..ha..you know why!!)

I haven't thrown the chassis out yet, so if there's any small components
that may still be there, let me know and I'll see if they can be removed
with any leads left. Any needs/offers? I'm looking for a 2-3 pos coax
switch, Dow-Key coax relay, 3B28's, J-38's, M15/UR mic.

Regards.

Watch out for the sharks!
I'll bet you've already had a dozen guys offer to buy it
for a few bucks.... Tell them "no thanks."

You have a very valuable set used by Airborne Pathfinder troops
during WW-II. It was part of the system known as the
Rebecca-Eureka navigation set. The Pathfinders went in
first to the drop zones and set up these "Eureka" sets.
The "Rebecca" radar set in the aircraft carrying the
main body of airborne troops then sent
a pulse to interrogate the PPN-1. The PPN-1 responded with
a pulse and the "Rebecca" set in the aircraft displayed
bearing and distance on a CRT. I have the CRT,
but have never been so fortuante as to find a PPN-1.

Outstanding find! I sure wish I could afford one for
my collection. The last one I saw on Ebay was in
excellent/complete condition and sold for over $1000.

Jealous but kind regards,
Dave Stinson AB5S

Subject: FS: Kenwood VFO-120

External VFO Matches TS-120 and TS-130. I think this VFO will also work
with the 520/530 and 820/830.

I have two. Both in good condition. One is complete with cable and book.
The other has a copy of the book and you'll have to make your own cable -
requires 2 5-pin standard DIN plugs - easy!

Kenwood VFO-120 with book and cable $100
Kenwood VFO-120 with copy of book, no cable $80

tnx es 73,

From: "John"
Subject: Speaker for Hammarlund?

All do respect to Dale, it was not the S-200 which matched the HQ-145, 160, 170 and 180. The HQ-150 speaker was the last of the "old style", as was the radio. Why the out of sequence numbering I don't have a clue. It was all metal, dark grey or black and just like the speakers for the HQ-129X, 120, 140. The one main difference is that it has a red Hammarlund logo near the top.

Subject: Speaker for Hammarlund?

Thanks for the inputs. I see also that Hammarlund refers to the speaker for the HQ-150 as the "8 inch PM speaker". I will keep my eye open for one of

those. This is my first 'boatanchor', unless I count the Hallis I had as a kid.

2409. Drake 2-B dial mod

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-22 00:00:00 UTC
From: n2cqr@erols.com
Message-ID: <39292d09.48669426@news.erols.com>
Source record: 66316

I'm working on a much-loved Drake 2-B that I've had since the early 70's I got it from my elmer. He (or maybe a previous owner) had modified the tuning mechanism by putting a reduction drive between the main tuning knob and the little shaft that turns the dial cord.

I think this was a sensible mod. One of the complaints I've heard about the 2-B is that it unes about 40 kHz per dial rotation. Too fast.

My problem is that it seems like the reduction drive has gotten kind of wiggly. The internal shaft (the part that rides on the ball bearings) is a bit loose. And the outer shaft (that goes to the knob) is also a bit loose. I think this is causing the dial to occassionally jump around a bit while tuning. Very annoying.

Anyone out there familiar with this Drake 2-B mod? Any suggestions on how to fix the "jumpiness" ? I guess a new reduction drive might do the trick. Any way to "tighten up" older reduction drives?

Thanks, 73 Bill N2CQR

2417. Re: Drake 2-B dial mod

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-22 00:00:00 UTC
From: Lamb <k7fm@teleport.com>
Message-ID: <CgaW4.283$RO1.35646@nntp3.onemain.com>
Source record: 66324

Hi:

Have never heard of that mod - but the Drake was too "fast". No doubt the ball bearings are getting sloppy. In that case, there is no way to repair the drive and a replacement is in order. I have removed and replaced bearings when I had to but that only solves 1/2 of the problem. Most of the reduction drives were common - so look for a replacement.

73, Colin K7FM

2418. =AD: Prep for HAM/FCC tests (yes, new tests too!). Download today!= .

Newsgroup: rec.radio.amateur.boatanchors

**** YES! This software is now updated to reflect the April 15th
**** changes in FCC licencing structure for Amateur Radio. The software
**** contains questions for the new and old ham tests as well as
**** the unchanged professional tests.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test
preparation software for the FCC/HAM plus some Professional tests
available for shareware download at http://www.dauntless-soft.com.
(aka http://www.hamexam.com -- easy to remember address--tell your
mates!) The program will drill you for the following elements:

ELEMENT
2 (NEW) Technician
3 (NEW) General
4 (NEW) Extra
2 (pre April 14, 2000) Novice
3A (pre April 14, 2000) Technician
3B (pre April 14, 2000) General
4A (pre April 14, 2000) Advanced
4B (pre April 14, 2000) Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online
registration is available--a $30 registration unlocks ALL the questions
and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the
software. That's less than $3/test.

This software is based around the same engine that drives our FAA test
prep software that has helped many pilots score very highly on those
exams. (Yes, we got a new hobby and decided it was time to write
software for it, too!)

Thanks for your time. We look forward to your visit!

Likewise, I seriously doubt that a perfectly-restored '64 Mustang is
"worth" $50,000, or that a '57 gull-wing 300SL Mercedes is "worth"
$1,000,000-plus, but they are collectables, and get that much.

A perfect HQ180 would qualify as a collectable, or certainly, will be
pretty soon.

Bill

Some of the reduction drives can be tightened up by bending in the tabs
that hold the thing together. This squeezes everything tighter. Too bad
drake did what they did to that dial. The rest of the receiver is great.
The dial on the 1A was much better than the 2A or 2B.

Good luck
Gary K4FMX

From: Steve Fried <k2pts@home.com>
Message-ID: <39295080.C6D0531@home.com>
Source record: 66330

I believe the HQ150 used the same speaker as the HQ140X. This was an all metal enclosure not the S200 speaker. The S200 was a speaker used with the HQ160, 170, 180 types. The S200 had a grill cloth front. The HQ150 speaker had a metal front with perforations. Am I not correct on this?

I have heard many FT 1000MP owners with nice well-rounded transmit audio. In many cases they have extremely good bass response. I have heard that this kind of audio can be achieved by adjusting settings in the hidden menus as well as the normal menus. Are there any 1000MP owners out there that can offer suggestions as to the best settings in order to get this nice full audio sound. I find audio like that is very comfortable to listen to when conditions are good. Of course I would reconfigure for a narrower sound when working DX. Thanks in advance for any advice.

Have a good quantity at $27/pr.

They're beam pentoads that look just like a 5881 but have larger
cathode for Mil pulse-modruater use.

Each pair come with ckt. xerox showing their use in a 1947 20W all-triode
hi-fi amp. Catch this, called 'golden ear 2.'

Subject: 6JS6A = 6JE6C/6LQ6?

Duncan,
Out of curiosity are the tubes you're replacing going into an old
Yaesu? Are they NEC's? If so, you'll have to use NEC's or you may have touble
neutralizing them.
According the source I checked the only substitute is a 6KD6 tube. If you want
check out this website:
http://hereford.ampr.org/cgi-bin/tube?index=1

It will give you the tube base and characteristics of just about any tube you can think of.
If you don't have a Yaesu product you're looking to replace the tubes in I'm sure there's something else you can use.
Good luck and 73.

All depends on it's condition.

By the way, be careful cleaning out the mouse droppings. There are deadly diseases you can catch from some types of it. Wear a particle mask and clean it out with a water hose to keep particles from becoming airborne.

Let me know if you have specific questions.

Subject: For Sale: National NC57.....

Hi All,
I have a National NC57 for sale. It has been brought up to par and works well on all bands. The speaker has been replaced as the original was full of holes, but the replacement came from another NC57. It has all of its original knobs and even has its bottom plate. The cabinet could stand to be repainted, but is acceptable. I am asking $120.00 for the set as it is right now. The buyer will pay shipping via UPS or USPS. I have a couple of photos that I can send you if interested. Please email me directly with any questions, etc...
rgds,
Mark S.

From: anchor@coastalnet.COM (Al Parker)
Subject: FS: Drake TR-4/MS-4/AC-3, or with RV-3

I need to reduce the "inventory" around here. Too many new things to enjoy
have come in lately. These units are all operating fine, and have been
used by me off & on for several months, or more.
TR-4 - s/n 32358, nice panel, no scratches, case has been resprayed, looks
very good. Has good finals, full output on all bands. Recently fully
aligned. Inside has been cleaned, but some black spotting. A previous
owner has put 3 or 4 small red dots on the 10m portion of the dial, I guess
to indicate his limits.
MS-4 - case has been resprayed, looks very good. Missing the MS-4 logo,
but it is an MS-4 (11-5/8" lg). Has a replacement speaker in it.
AC-3 - good, in use.
RV-3 - nice panel & case, no scratches. Not sure if switch knob is
original, it's slighly bigger than the one on my RV-4 (which is my
replacement for the RV-3).
Prices--
TR-4 w/MS-4/AC-3 and manual copy $275
TR-4 w/RV-3/AC-3 and manual copy $325
RV-3 only, if TR-4 is sold first, $85
all prices plus shipping

Subject: FS: WWII German and British Morse keys

I have for sale a WWII German army CW key and a British Air Ministry Morse key.

The Germany key is a type T1SBF and it has the German eagle stamped in the base plate.

The British key is labeled: AM Type B. Ref No5c/372 Switchbox Identification. It was used on the Spitfire but also on other planes of the day. It was used to key the Navigation and/or Landing lights for identification purposes, when radio communication was not available or not allowed. The key is made of Bakelite, round, 3.5" in diameter and 1" thick. The key protrudes out of the front just below two lever switches marked Downward and Upward respectively. The switches have three positions: Morse, Off and Steady.

Both key's are in good condition and I have pictures of them I can Email

Should you be interested, I'm asking 75$ per key. Shipping from Holland Will be 20$ when sent together or 15$ per key when sent separate.

If you have a TRC-77 available then I'm interested in a swap

Subject: Need Command Rig Dual mount

Not be "modified-" Sorry!
There aren't that many of these in original condition left.
You can still find single TX and single RX mounts with
a little "beating the bushes." Which models of
transmitter and receiver do you want to use?
The AN/ARC-5, ATA/ARA and SCR-274N families of
Command Sets use differing racks.

> Is this correct?
> Any ideas where to locate one?
>
> --
> Regards
> Ray

Ray,

browsing this ng I found the following webpage that gives quite a reasonable picture of the T-195 front panel:
http://web2.airmail.net/fledda/radio_GRC19.html

Looking at my T-195 manual, the rh meter certainly is scaled in VU. Can't tell what size it is, but it looks to be identical in style and type to the left hand one.

If you find one, please let me know where you found it, as I need one for my T-195 as well!

If you also know where to get plugs/sockets for the internal modules, or alternatively "board extenders" - I would be glad to hear about those too. Its virtually impossible to work on the set with power applied and the modules in place.

Subject: tuning dial string

Greetings,

I have an old radio (Century 21), not exactly a "boat anchor" on which the string/cord which wraps around the variable tuning capacitor and the tuning dial seems to have streched causing the dial to slip, rendering it usless for correct freq. readout. Short of replacing the string, does anyone know of a remedy , such as some substance which could be applied to the string causing it to slightly shrink (or get "sticky") and regain it's grip ? Thanks in advance for any/all replies.

Regards,

Rich / KB2CPE

From: jm_lekostaj@ibm000.net (Joe LeKostaj)
Subject: tuning dial string

Rich,

Depends on just how loose it has become. Many years ago I read in QST that putting powdered alum on a dial string can help. Tried it once, but didn't work for me. I'd suggest this: if your string is knotted at the ends, as opposed to having a metal crimp, try loosening the knot only slightly with a toothpick but don't undo the knot altogether. Then use a needle-nose pliers to pull some of the slack thru the knot, then pull it tight again. I've restrung a couple of broadcast radios lately, and it isn't really as hard as it seems at first. Good luck!

From: Donald Borowski <Don_Borowski@Agilent.com>
Subject: What If .. No xsistors

Although the thorium is a radioactive element, it is used for its thermionic
emissions properties (much better than pure tungsten), not for its radioactive
properties.

BTW, thorium also makes the tungsten wire more ductile, and thus easier to draw
and bend, which is why GE was using toriated tungsten to make lightbulbs at the
time the guys in the tube works ran out of tungsten wire for filaments and went
over to borrow some tungsten wire, only to discover a much better material for
filaments (vis '01 vs. '01A triodes).

Er, that was the late 50's, not late 70's.

My father's 58 Edsel had this kind tubes in its radio.

Cortland Richmond wrote in message <391BBD6F.CF83D25D@usa.alcatel.com>...
>In the late 70's there was a new class of tubes developed for automotive

Source record: 66342

I have the following tubes for sale. These were purchased in a GE Mobile Communications tube caddy and are all New in the Box, except for 2 of them which have no box but are still new. All are GE manufacture unless noted. They date from the mid to late 60s, and have been stored in a basement since then. Guaranteed to be new, returns OK unless filament is gone, buyer pays shipping both ways. Prices shown are per tube, and are about 70% of list price. Multiple purchases will be discounted, shipping is extra. HEY, If you don't like the price, make an offer, I might say OK! Email with any questions but I won't be in email contact from 5/24-26 and will respond on 5/26.

Thanks for the look, 73... Phil

Message-ID: <3929c427.106843820@news.swbell.net>
Source record: 66344

Hello, I am looking for some help in identifying a radio. This radio was made by GE. It is in a large metal box with a rack inside. About 3 feet or so wide x 3.5 feet or so tall x and about 1.5 feet deep. It has a remote DC head (this is what a guy here called it) with a desk microphone. This is not a mobile rig. Originally it was used for business freqs around the 6 meter band. There are 4 invidual units mounted on the rack in the box. The top unit is the transmitter and contains 3 tubes along with one xtal and various parts. the next unit appears to be nothing but an amplifier. There are 4 transistors in it and a cooling fan. The third unit is the reciever and really dosen't have very much to see. There is a copper sheild that covers most of the contents of this unit with a few holes in it for tuning. The last unit is really just a control board. There are two relays and a view power switches on it. On the back side of the rack is a board with 4 large paper capacitors and several 1 watt resistors.

The information I have gotten off the box is as follows

General Electric

Station Comb: DM74RAW33
Transmitter Type et-s5-8

Made in Lynchburg VA USA

I think I heard that it might be a GE MASTR series, but i do not know if this is correct or not. Thanks for any help. If you need more information or pictures let me know and I can get you some more information.

I also have a RCA model CMLL4MMB mobile radio that i am looking for information on. This radio has a remote mount head. It is only one freq although it has a place for 3 more in the rcvr section. This was a UHF business radio.

Any information on either radio including user manuals and schematics are welcome. thanks

2438. 1614 Replacement for Ranger?

Newsgroup: rec.radio.amateur.boatanchors

Source record: 66347

A 1614 is an industrial variant of the common 6L6, and can be replaced with the 6L6GC, which is still being manufactured. A plain vanilla metal 6L6 would probably work, as well.

Seems like reasonable responses to the complaints. Funny 2 negatives are
from the same person. Overall sounds like a decent seller. Not really sure a
SX-88 is worth $3500 or more, but to each his own.

Source record: 66350

It sounds like you have a GE Master Professional (Master Pro). There should be three tubes in heat sinks. The smaller one is an 8106. I've forgotten what the number on the other two is but it is the same on both. Rated at 100Watts output. In the VHF low band that radio had 3 or 4 splits. That is, the frequency determining parts (caps and coils) changed from split to split. If yours is a lo-band HI-split it may tune into six easy. If it is a mid or lo split it might take a lot of work.

Send me the ER- number off of the receiver and the complete ET- number with REV and I'll see if I still have a book on the units. I'll see if I can give you a little more help.

Don't get alarmed that there are blank holes in the chassis. There is a big hole for the noise blanker and most base stations didn't have a noise blanker.

I don't remember the RCA numbers so can't help you on it.

Ah more fodder for the Auction Bashers!!!
They should see the 57 Chevy Convert that just sold here for $30,000 -
original about $3,000
OR the Texaco Airplane model that sold for $19.95 -- now $172.50
ETC
Collectibles ARE!!

$30,000? Prices must be coming down. I saw a black '57 convertible
with red interior and tri-power with a STARTING bid of $35,000 in Sun
Valley Idaho in 1988! Don't remember what it finally sold for.

2454. Wanted: FT200 schematic as GIF or JPG

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-23 00:00:00 UTC
From: Andrew <andrew@eightoseven.freeserve.co.uk>
Message-ID: <8gek9v$q4a$1@news6.svr.pol.co.uk>
Source record: 66250

If anyone out there has both an FT200 schematic and a scanner and is prepared to take the time to scan it in and email it to me it would be much appreciated.

I bought the set at a rally and was promised the original manual in the post but it hasn't turned up. I'm hoping to sort the set's AGC system in time for a public event station this coming weekend. I guess this is short notice !

If anyone can help it would be much appreciated.

Keep that BA iron warm :)

73,

Andrew

Why does it auction so high? I notice the sx-88 model came out in
1954-55. Surely some of the later models, the sx-101, for instance,
were better electronically?

Not many made and hardly ever see a good one for sale.

Rarer than the SX-115.

2460. Heathkit knobs & paint

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-23 00:00:00 UTC
From: Mike Swift <mswift@dial.pipex.com>
Message-ID: <8geshp$k9e$1@lure.pipex.net>
Source record: 66256

Hi all

I've just acquired a lovely old Heathkit SB-102, and I'm on the look out for two or more of the dark green Heathkit knobs as supplied with the SB series of radios. Must be in good condition, with silver inserts intact. If you have one or more of these going spare, please e-mail me with the price you'd want inclusive of P&P to the UK. Alternatively, if you know of a supplier for these knobs, I'd really appreciate their contact details.

I'm also looking for one of the solid metal dial calibration knobs for the same series of radios, but again it must be in very good condition - the one I have has been polished so much that the shiny coating has all but disappeared.

Finally, anyone know of a contact in the UK or abroad who can supply the original Heathkit bluey-green paint? I'd like to have the case of the radio re-sprayed, but only if I can find the original colour.

Thanks in advance.

Frankly, even fully restored, a $6800 pricetag is a wee tad on the nuts side. I'm sure the fellow who sold the radio is quite happy with the arrangement, however ;-)

A 1957 Chevy convertible is one thing, but an SX-88 ... well, it's just another radio ... :-)

Source record: 66258

I don't know if this will help or not, but I ran across these guys searching for something else. I have two 2-B's and someone had attempted to increase the tuning ratio by reducing the drive shaft diameter on a lathe. This however reduces the drag - less surface area for the string - and it makes slippage a problem if you turn the knob too fast. The reduction gears offered below - and I know nothing about the company - may be a solution. Please keep me in the loop - I would be interested in how you resolve the problem.

Here is a suggestion.... take it for what it's worth.... What about using FGS for those interesting eBay auctions and other comments?

FGS stands for "FOR GOODNESS SAKES"

It goes along with FS and FA subject headers.

Lets those that want to read that sort of stuff (I do) and allows others to pass on it.

Sound like a good idea?

Source record: 66271

I have the following tubes for sale. These were purchased in a GE Mobile Communications tube caddy and are all New in the Box, except for 2 of them which have no box but are still new. All are GE manufacture unless noted. They date from the mid to late 60s, and have been stored in a basement since then. Guaranteed to be new, returns OK unless filament is gone, buyer pays shipping both ways. Prices shown are per tube, and are about 70% of list price. Multiple purchases will be discounted, shipping is extra. HEY, If you don't like the price, make an offer, I might say OK! Email with any questions but I won't be in email contact from 5/24-25 and will respond on 5/26.

Thanks for the look, 73... Phil

Pat,

The only way to do it is to control the audio freqs going into the high level modulator. There are many ways to do this.

You could make yourself a low pass audio filter going into the audio pre-amp stage. This works but I don't suggest it because you will have to use a computer to model the filter and then build it. There ARE formulas you could use but in the end, it's pretty much a cut and try thing... as all of our voices are vastly different.... but you could do it and if done correctly will provide average performance. You could add a volt amp and make an ALC circuit of sorts.

The next method I suggest is to purchase an active audio equalizer. There are a bunch of cheap ones for CB'ers but I recommend going with W2IHY's unit. I heard many 20M DX'ers using it and can be adjustment many different ways... go to WWW.W2IHY.com for a demo on it - even comes as a kit.

The last way is the way "real" broadcast stations do it. Purchase an Orban Optomod (or OptoCrud as we BC engineers like to call it). It cost 6 g's BUT it is well WORTH it. It's a audio equalizer and compressor built into one. When properly setup for AM - nothing can touch it. PERIOD. You will have to buy it new as you seldom find it in the used market and when you do they are almost the same price as new.

A cheaper route is to use a cheaper commercial audio limiter - compressor like CBS Labs Audio Solidstatesman. You can find these all over the place for $450 and that's about what they are worth.

So to sum it up - limit your audio freqs to restrict your RF bandwidth.

I assume now you have nothing but a Mic to your broadcast transmitter. As you found out - it doesn't take much to go over 100% modulator creating splatter and making you "Mr Popular" with your SSB/CW buddies. If your "flying by the seat of your pants" and your transmitter has a "modulation meter" I suggest you stay less than 30% on average - your peaks will still be hitting 90 and 100 + even then.

If you have an OptoMod you will find your average will be at 85 - 90 % while peaks will still be at or below 100% (or 120% Positive if your transmitter is setup for it). Like I said - it's expensive but worth it....

If you need more help, give a call to your local AM station. Most AM BC engineers are hams. and who knows... if you like tinkering with your toy - you might find a job doing it for real....

hope that helps ... WD0HCO

If you had lots of money then how much you pay for something is really not an issue and has NOTHING to do with common sense. Common sense is when the guy buys the item for big money and then throws it into a leaky storage shed never to be seen again. I have been a witness to this kind of sickness to many times.

Take the advertisements on TV when they tell you to buy their fancy new Truck for $35,000 then take it out into the roughest outback you can find and distroy it. So why the H buy a new Truck to do this.

Same goes with the radios. Might as well buy an S-120 for $500 and destroy it.

What "illegal high-frequencies?" There are no specified bandwidth in the
FCC rules other than "good engineering practice." If you think the
transmitter was poorly engineered, then limit the audio bandwidth at the
low levels (i.e. the line-level feed to the transmitter). You can built
a filter or use an equalizer to cut the higher frequencies.

Thanks fer info-Ive gotten 2 or 3 different answers on my request- The only dual racks inre arc5 are double xmitter racks? Is this correct? Im not one to destroy gems of ww2-! I wanted to side by side mount a pair for ham use and total cw op fun. I also saw in my old conversion manual that they put a rcvr rack into a double xmitter rack and it looked great.Ofcourse the stuff was easily available then. Anyways 73s Lew-KlNDV If I can find separates -Ill take ur suggestion

You're full of it!

There are groups on both coasts, as well as in between, who are employing retuned BC transmitters on HF DAILY! Naturally, they must be operated according to regulations, but that's neither difficult OR rocket science...

Using a BC transmitter on the ham bands is not LEGAL! It's a matter of bandwidth, the AM generated by a BC transmitter, is much wider than a rig designed for ham use. Read Part 97 and you will see.

West coast and central states AM operators get on 3885 khz several
evenings a week - a fair number of the group use retuned broadcast
transmitters... There's also regular AM activity on 160 meters at 1945
khz...

Depending on your voice....First off set your md-100 mic (assuming you
have that one) the the "THRU" position. And try these sets. They work
for me.
FT1000MP Menu sets used by W4NTI.

2-9 autonotch (for carrier ellimination, ssb)
must be out for cw, use IF Notch on cw.

4-4 Tx EDSP, set to 4. (You may need to '
play with this for your voice).

4-5 SSB Lpf 3200
SSB Hpf 100
A1 Bpf 60 for digging, 120 for
normal.
A3 Lpf 3200 (default)
A3 Hpf 100 (default)
dig fil PKT (default)

7-1 Keyer Dot 10

7-2 tyr Dash 35

7-5 Keyer Bk-In .18 to .26 (amp drop out)

7-7 SSB r 100-3100 Adds RX Bass
SSB t 200-3100 Adds TX Bass
cu-r on (default)
An-r on(default)

8-2 Split operation nor(default)

8-4 Front end RF amp Flat for all band
operation/ Tuned for
ham bands only.
I use tuned mostly.

8-9 r-LSB carrier -0.000
t-LSB -0.100
Proc-LSB -0.050
r-USB carrier -0.000
t-USB -0.100
Proc-USB -0.050
t-A3-car -1.080

Here is how to get to the "hidden menue". When
you bring it up, record EVERY setting in case you
mistakenly change something.

With radio in OFF position. Push "FAST and LOCK", then POWER ON.
Release buttons. Select
normal menue by pushing FAST and ENTER. Dial
up past 8-9 and there is menue 9.

To make radio xcve everywhere go to 9-9 and
select GEN.

To vary IF rx Gain, go to 9-1. I raised mine from 10
to 12.

Hope this get's you started and have fun.

POWER on SETTINGS

28 + POWER Resets ALL menu settings to factory default.

SUB + ENT + POWER Resets ALL memories (except menu settings)
to factory defaults.

SUB + 29 + POWER CPU Master reset for ALL memories and menu settings.

For my collection I'm looking for a commercial Redifon GR-410 HF set or a Station Radio C14 as it is known in the military.

The Redifon GR-410 is a HF set, 3-18Mhz, 8 fixed channels and an RF output of 100W SSB and 50W CW.

To: k8cca@arrl.net
Subject: HT-33A

Eric,

I have had a new PL-172A with socket for a number of years. I was
curious as to what amateur equipment the tube might have been used in.
Now I
know! We use to use the tube in a Military transmitter (AN/FRT-53).

If you happen to run across someone that needs this tube w/socket,
send
them my way would you?

Thank You,
Ernie W4NAI

Likewise, I seriously doubt that a perfectly-restored '64 Mustang is
"worth" $50,000, or that a '57 gull-wing 300SL Mercedes is "worth"
$1,000,000-plus, but they are collectables, and get that much.

A perfect HQ180 would qualify as a collectable, or certainly, will be
pretty soon.

From: Bob Weiss
Subject: 1614 Replacement for Ranger?

A 1614 is an industrial variant of the common 6L6, and can be replaced with
the 6L6GC, which is still being manufactured. A plain vanilla metal 6L6
would probably work, as well.

Subject: =AD: Prep for HAM/FCC tests (yes, new tests too!). Download today!=

**** YES! This software is now updated to reflect the April 15th
**** changes in FCC licencing structure for Amateur Radio. The software
**** contains questions for the new and old ham tests as well as
**** the unchanged professional tests.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test preparation software for the FCC/HAM plus some Professional tests available for shareware download at http://www.dauntless-soft.com. (aka http://www.hamexam.com -- easy to remember address--tell your mates!) The program will drill you for the following elements:

ELEMENT
2 (NEW) Technician

3 (NEW) General
4 (NEW) Extra
2 (pre April 14, 2000) Novice
3A (pre April 14, 2000) Technician
3B (pre April 14, 2000) General
4A (pre April 14, 2000) Advanced
4B (pre April 14, 2000) Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online registration is available--a $30 registration unlocks ALL the questions and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the software. That's less than $3/test.

This software is based around the same engine that drives our FAA test prep software that has helped many pilots score very highly on those exams. (Yes, we got a new hobby and decided it was time to write software for it, too!)

Thanks for your time. We look forward to your visit!

http://www.dauntless-soft.com / http://www.hamexam.com

From: Matt Erickson
Subject: Broadcast Transmitters ??

Using a BC transmitter on the ham bands is not LEGAL! It's a matter of
bandwidth, the AM generated by a BC transmitter, is much wider than
a rig designed for ham use. Read Part 97 and you will see.

From: "Lamb"
Subject: Drake 2-B dial mod

Hi:

Have never heard of that mod - but the Drake was too "fast". No doubt the
ball bearings are getting sloppy. In that case, there is no way to repair
the drive and a replacement is in order. I have removed and replaced
bearings when I had to but that only solves 1/2 of the problem. Most of the
reduction drives were common - so look for a replacement.

73, Colin K7FM

Date: Mon, 22 May 2000 15:12:21 GMT
From: Gary Schafer
Subject: Drake 2-B dial mod

Bill

Some of the reduction drives can be tightened up by bending in the tabs
that hold the thing together. This squeezes everything tighter. Too bad
drake did what they did to that dial. The rest of the receiver is great.
The dial on the 1A was much better than the 2A or 2B.

Good luck

From: lmgus@swbell.xx.net (Gus)
Subject: GE Radio

Hello, I am looking for some help in identifying a radio. This radio
was made by GE. It is in a large metal box with a rack inside. About
3 feet or so wide x 3.5 feet or so tall x and about 1.5 feet deep. It
has a remote DC head (this is what a guy here called it) with a desk
microphone. This is not a mobile rig. Originally it was used for
business freqs around the 6 meter band. There are 4 invidual units
mounted on the rack in the box. The top unit is the transmitter and
contains 3 tubes along with one xtal and various parts. the next unit

appears to be nothing but an amplifier. There are 4 transistors in it and a cooling fan. The third unit is the reciever and really dosen't have very much to see. There is a copper sheild that covers most of the contents of this unit with a few holes in it for tuning. The last unit is really just a control board. There are two relays and a view power switches on it. On the back side of the rack is a board with 4 large paper capacitors and several 1 watt resistors.

The information I have gotten off the box is as follows

General Electric

Station Comb: DM74RAW33
Transmitter Type et-s5-8

Made in Lynchburg VA USA

I think I heard that it might be a GE MASTR series, but i do not know if this is correct or not. Thanks for any help. If you need more information or pictures let me know and I can get you some more information.

I also have a RCA model CMLL4MMB mobile radio that i am looking for information on. This radio has a remote mount head. It is only one freq although it has a place for 3 more in the rcvr section. This was a UHF business radio.

Any information on either radio including user manuals and schematics are welcome. thanks

Date: Mon, 22 May 2000 21:39:14 -0400
From: Jim Campbell
Subject: GE Radio

It sounds like you have a GE Master Professional (Master Pro). There should be three tubes in heat sinks. The smaller one is an 8106. I've forgotten what the number on the other two is but it is the same on both. Rated at 100Watts output. In the VHF low band that radio had 3 or 4 splits. That is, the frequency determining parts (caps and coils) changed from split to split. If yours is a lo-band HI-split it may tune into six easy. If it is a mid or lo split it might take a lot of work.

Send me the ER- number off of the receiver and the complete ET- number with REV and I'll see if I still have a book on the units. I'll see if I can give you a little more help.

Don't get alarmed that there are blank holes in the chassis. There is a big hole for the noise blanker and most base stations didn't have a noise blanker.

I don't remember the RCA numbers so can't help you on it.

From: Steve Fried
Subject: Speaker for Hammarlund?

I believe the HQ150 used the same speaker as the HQ140X. This was an all metal
enclosure not the S200 speaker. The S200 was a speaker used with the HQ160,
170, 180 types. The S200 had a grill cloth front. The HQ150 speaker had a
metal front with perforations. Am I not correct on this?

From: simserv@inmind.COM (Phil Bartells)
Subject: Tubes for sale, mobile comm types

I have the following tubes for sale. These were purchased in a GE Mobile Communications tube caddy and are all New in the Box, except for 2 of them which have no box but are still new. All are GE manufacture unless noted. They date from the mid to late 60s, and have been stored in a basement since then. Guaranteed to be new, returns OK unless filament is gone, buyer pays shipping both ways. Prices shown are per tube, and are about 70% of list price. Multiple purchases will be discounted, shipping is extra. HEY, If you don't like the price, make an offer, I might say OK! Email with any questions but I won't be in email contact from 5/24-26 and will respond on 5/26.

Thanks for the look, 73... Phil

========
Being the good old USA, demand by Collectors and Museums determine the market prices. Some things just keep appreciating, like a 55 T-Bird, Pentax S1, old Nikons. You laugh now, but I suspect the guy who bought the HQ-180 will have the last laugh (if they wait long enuff).

Yeah, my little Leica IIIf, red dial, that I bought for about $98 used
is now worth 5 or 6 times that amount.

What's amazing, if you used to buy LPs when you were a kid, is what
they are worth nowadays... I've got crapola LPs from the 60s that are
worth a fortune nowadays...

Damn, wished I'd a-bought that Beatles album with the butchered pigs
on the cover... I saw it in the store right after release... $3.98...
passed on it...

Ah missed opportunities Bob -- I was in the Navy in Memphis in the early 50's and car salesman practically gave me a Tucker - I passed. My Father-in-law was offered Mel Fisher stock before Mel found the Atocha. My Mom turned down an offer to buy IBM stock in 1949!!! Ah well maybe I'll buy a HQ-180

From: "Meech"
Subject: HAM Licensing

Hello all -

I recently bought a sailboat that is equipped with an ICOM HAM/SSB.
Needless to say, I want to learn to use this equipment properly and legally.

Is there anyone online who would care to help me through the licensing
requirements before I go on the air and make a fool of muyself (and irritate
a lot of HAMS) ?

Thanks,

M

Date: Wed, 17 May 2000 20:27:25 GMT
From: Dick Hughes
Subject: HAM Licensing

If you know of a ham radio club in your area (sometimes listed in the
yellow pages) you can start by attending a meeting. If you don't,
most Radio Shacks have books and other documentation regarding
obtaining an amateur radio license. From your description of the
radio it sounds like you will need at least a General Class license
unless you want to limit your activity to 10-meters. I would worry
more about the FCC than irritating other hams. Good luck to you.

From: WB3KUM/9
Subject: HAM Licensing

Your in luck, the FCC just relax one of the requirements.

There is two "beginner licenses", Novice and Technician

Technician is very popular, it allows someone full privileges in the the
VHF, UHF and microwave amateur bands. It consist of a test of general
radio and other theory, operating practices, and rules and regulations.

Novice, allows restricted privileges in the Short-wave band, 1 VHF band
and 1 microwave band. It consist of a test of basic radio and other
theory, operating practices, and rules and regulations. There is a 5
WPM Morse code test.

While no longer noted on your license, if a person holds a Technician license and passes the Morse code test, you obtain privileges for both novice and technician license.

General, allows full privileges on most of the portion of the 5 main short wave bands, plus the 3 added in 1979, and the one medium wave band inaddition to and the VHF/UHF/and microwave bands. I consist of Novice/Technician test, plus a couple of extra questions, same Morse code test.

Extra, full privileges. Very comprehensive test on all modes of operation, same code test

Contact the American Radio Relay League (ARRL) and www.arrl.org. They should be able to point you a club in your area.

Best of luck.

Dennis

From: General Mark Morgan
Subject: HAM Licensing

If you operate without a license I don't think you will "irritate a lot of HAMS" but you might piss off the FCC and find yourself in jail and paying a hefty fine. Go to WWW.ARRL.ORG on the WEB and learn what is necessary to get a ham license.

From: k5dh@raytheon.com (Dean Hemphill, K5DH)
Subject: Heathkit DX-40 filament circuit question

In the Heathkit DX-40 transmitter, the 6CL6 buffer amp tube (V2) is on a separate, isolated power transformer filament winding, while all of the other tubes and the terminal on the accessory socket are powered off of another filament winding. Why was it done this way? I have a DX-40 which is missing its power transformer, and I'm looking for some

kind of substitute unit. What would it hurt to add V2 to
the regular filament string, in the event I can't find a
transformer with two 6.3 VAC windings?

73,
Dean, K5DH
Visit my amateur radio web site at http://www.qsl.net/k5dh

Date: Wed, 17 May 2000 20:18:21 GMT
From: WB3KUM/9
Subject: Heathkit DX-40 filament circuit question

I would not recommended it. The reason this was probally done was the
transformer could not supply enough current for the final and all the
other tubes. This was placed on it's own transformer. If you can find
a replacement transformer with a higher current rating, this should
work, if not, you will need to locate a second transformer. Check all
the tube specs and check the filiment ratings and add them up. You
should not go over 50-70% of the transformers rating.

Date: Wed, 17 May 2000 13:06:24 GMT
From: k5dh@raytheon.com (Dean Hemphill, K5DH)
Subject: Heathkit parts needed

HEATHKIT PARTS NEEDED:

For DX-40 transmitter:
- Power transformer (or a suitable substitute).
- Plate current meter.

For VF-1 vfo:
- Frequency dial scale, in good shape with all markings intact.

For AC-1 antenna coupler:
- Front panel, in good shape with all paint and markings intact,
and with no extra holes or modifications.

For MT-1 transmitter:
- One medium-size satin finish knob.
- Glass window that goes in front of the VFO dial drum.
- Cabinet, rust-free with no extra holes drilled in it.
- Operator's manual with alignment and troubleshooting
information (a good photocopy would be fine). I have
the schematic, so don't need that.

Subject: qurtz crystal suppliers in the USA

Even in OEM quantities the price of crystals in that range is 3 to 10X
the price of crystals at 10+ MHz. In large quantities the low
frequency parts are contoured in pipes. Done one at a time instead of
in pipes the cost is even higher.

You might do better to find some on the surplus market rather than
from a manufacturer. Another option depending on the equipment would
be to replace the crystal with a 990 KHz packaged oscillator of one
sort or another.

Subject: Ranger I case screw rod substitute

You can also make your own out of properly sized all-thread, available
at most better equipped hardware stores - you cut the proper length,
get the proper round-head bolt for the outside, and splice both pieces

inside the case with the splice-nuts the also sell with the
all-thread... When finished, they look and work as good as the
originals...

The TV-7 military jobs are great for small signal tubes. It might take
a
special piece of equipment for testing final amp tubes.

The TV-7 does test low-power transmitting tubes like the 807 and 6146,
but it doesn't have the "guts" to test them at full output. Still, it
will identify ones that have really gone flat.

From: "Tom"
Subject: Suitable replacement for Ranger insulated VFO coupling

Despite the many warnings I received concerning this delicate part, last
night while removing the front panel, I broke it cleanly in two. Now I'm
looking for a suitable replacement, or was wondering if I can home brew
something out of glass epoxy circuit board material. Is flexibility of the
coupling an issue here, or is it merely insulation of the VFO shaft? This
is my first foray in restoring an old piece of gear, so everything is a new
experience. Frustrated, but having fun.....Tom K3GM

From: K6RB
Subject: Suitable replacement for Ranger insulated VFO coupling

Tom,

I had the brittle phenolic break in one of the Rangers I restored. I took the
metal hardware and drilled out the rivets. Then I cut a piece of heavy gauge but
flexible plastic about 1" square. Using number 4 screws and nuts, I connected
the coupling hardware to the plastic and reassembled it. It worked better than
the original. The key function is to insulate the shaft but flexibility is
important for smooth dial drive.

Easiest way is to tighten the spring that holds tension on the string.

First thing to do is lube the tuning cap and pulleys. That will very
often fix a slipping dial string. If that doesn't do it, you can try
applying
some rosin or "dial cord dressing" that is available from Bill Turner
over on rec.antiques.radio-phono. Finally option: you can replace
the string. I have found that high test fishing line works well (not

monofilament stuff). When you replace the cord, if the original cord was wrapped around the drive shaft 3 times, wrap it 4 or 5 times with the new string. That will absolutely fix any problem you have with a slipping dial cord.

If that's a Ten-Tec Century 21 it's most likely not the "string". If the symptom is that the pointer will not return all the way to the left it's the elastic bun gee cord inside. If the pointer moves, then stops, then moves again and the frequency does not run up/down and the tuning is jerky then it's in need of a PTO rebuild. I just replaced the bun gee on both my 540 Triton IV and Argonaut 509 plus did the PTO rebuild on the 509. Plays like a new radio now and tracks great. Ten-Tec sells the rebuild kits for $20 to

do your own or rebuilds them at the factory for +/- $100.

I'd phone Ten-Tec Service Department and speak to Garland Jenkins. He'll
help you and he's forgot more about these vintage Ten-Tecs then anyone else
knows.

One other thing, Rich.
Before you try anything, draw a clear diagram of exactly how the string runs from start to
finish, including the spring and all of the pulleys.

>computers, software, etc.

Not really. The first generations of computers used tubes. ENIAC, the first
full scale general purpose digital electronic computer, used 18,000 of them. By
the mid '50s, the giant SAGE system used 44,000 tubes.

Spread spectrum was invented in the '40s. One of the the coinventors was Hedy
Lamarr (yes, THAT Hedy Lamarr).

One of the best kept secrets of WW2 was the proximity fuse. This was a small
radar set that was installed in the nose of all types of artillery shells, and
would detonate the shell when it neared an aircraft or other large, conductive
target. Each fuse used four subminiature tubes, and had to withstand severe
conditions (months of storage, use in all climates, 20,000 G shock, no
adjustments, and near-zero chance of false detonation). All of these problems
were solved, and the fuses were produced by the millions.
>
>Maybe if transistors hadn't been made workable, tubes would have developed
>into something like ICs - it is obvious that miniaturization was taking place
>even in tube based equipment. Maybe tubes would have been built in arrays of

>almost microscopic units similar to field emissive displays.

Perhaps.

Here's another thought:

Could the transistor have been developed without the tube coming first?

Hello..

Is it possible to purchase laser printer/ink jet printer paper that will allow one make your own ' rub-on ' letters/numbers? I've seen the type where the plastic is affixed to a sticky back (like sctoch tape) but I was wondering if this rub on stuff is available.

Also, I would appreciate if someone would explain how artwork stencils are made so that one can airbrush panel labels, etc??
Thanks - Jim

Try Digi-Key Part #TTS-5-ND.

It is normally used for transferring PC artwork directly to a board, but can
also
be used for panel labels.

Subject: $1000+ for an HQ-180!

I think it is a case of too much money laying around. If I really wanted
something I would spring for it, but I think some of those prices are hit or
miss. You may just catch the collector (rich) that wants something and goes
for it may go for years as the baby boomers and I am one, start to retire
and have the time to work on and operate some of this older gear.

Subject: $1000+ for an HQ-180!

What do you expect these days....all that stuff is classic gear and if
its mint..guys will pay the price.

I just bought a like new hallicrafters SX100 for $375 and I thought I
got a deal.

I bought a 1965 corvette sting ray about 15 years ago and at that time I
paid $ 17,000 and now its worth $30,000 with the new paint job.

Look at it this way...its like money in the bank when it comes to
classic items.

Jack

Anything that has tubes, tires, or floats is NOT an investment. At best it is
speculation.

It's all junk.

I'm not saying don't buy old stuff. If that's what you like
and it brings you pleasure, or status or whatever it is that
is conferred to you by the purchase, then do it. Just don't
kid yourself into thinking that you're making an investment
of a financial nature. That would be as silly as calling a
diamond ring purchased at a shopping mall jewelry store
an investment.

When you buy old junk, you are spending, not investing.
Once in a while you might get lucky and find that a market
has developed for something you own, but it would be
pretty ridiculous to pull your money out of stocks, bonds,
and what have you to buy a bunch of old junk.

Subject: combat radio set

Wonder if you might have an idea about a radio set that I have. It is in a water-tight knapsack, with 6-foot tall folding antenna (looks as if it
were cut for 220 mhz) that has a foothold for quick planting in the ground. There are two units--the first is a small vibrator power supply, PPIIA/PPN-1 CFJ that works on 6VDC. The other is a 4 x 7 x 2 transceiver with a watertight headphone jack, a rubber-sealed toggle switch for "test", and a covered button labeled "CW". There are two rotary switches with 5 channels each for the transmitter and receiver. There is a cylinder running through the middle of the chassis, terminated by a red screw top in the back, marked "dest"--possibly for a destructive charge to stymie whoever captured it. Its plate identifies it as: * RT44/PPN-1A, 3483 CFJ, 2141-MPD-44.

From: "Ron Ostman"
Subject: Eldico TR 75 TV5

I have a TR-75 TV that is operational and looks real good. If I can borrow a digital camera, I'll try to get some pics - remind me and I'll send them to those that request them. (Be patient!) I also have the earlier TR-75 (no cover, all "surplus" parts). This was my dad's first transmitter and I rebuilt it when I was a Novice in 1974. It has more "character" than the covered-up 'TV version! I would like to find the matching modulator that was available - MD-40, I believe. Any leads? Otherwise , I'll homebrew one.

73,

Ron, W&#65533;NYQ

From: "Bill Fairbanks"
Subject: HAM Licensing

Your radio might not be a ham transceiver but a marine transceiver !! If that's the case, go to your local marina or marine supply house and the folks there ought to be able to guide you to getting an operators permit for a marine radio. I'm no expert, but getting a license to operate radio gear in aircraft is about as simple as filling out a form and I imaging that the process for marine gear is probably about the same.

Getting a ham license is another matter. Because of the license class restructuring that took place in April, the new study material for these new license classes wont' be available until June. The test for a Technician license is fairly easy if you study but you probably won't be able to just walk in, take it and pass. Radio Shack and the ARRL produce some good study guides just be sure that what you buy applies to the new

testing pool. The FCC has de-emphasised some of the more technical stuff
and put more emphasis on operating parameters, rules & regs, etc.

Hope this helps. Have fun with your new boat....and radio !!!

>Mark W4UDX - Proud owner of a Drake B-line
>Drake fan for life......

Hmmm...dont' know about that one. If I was running Drake I would not resume
manufacturing amateur equipment just because a bunch of hams signed a petition.
Like it or not, Drake is in business to make a profit, just like any other
business. I guess the question is, can Drake compete with such companies as
ICOM, Kenwood and the like. I too would like to see them start back into making

amateur radio products, but I don't think I would invest my life savings in their stock if they did. That market is not very large and is very competitive right now.

That's just my 2 cents worth.

Subject: Heathkit DX-40 filament circuit question

In article ,
k5dh@raytheon.com (Dean Hemphill, K5DH) writes:

>In the Heathkit DX-40 transmitter, the 6CL6 buffer amp tube
>(V2) is on a separate, isolated power transformer filament
>winding, while all of the other tubes and the terminal on
>the accessory socket are powered off of another filament
>winding. Why was it done this way?

The DX-40 RF section has three stages: xtal osc, buffer/multiplier and final. For some reason the designers set up the oscillator and buffer HV to work in series. Look carefully at the schematic - you'll see that the plate circuit of the buffer stage has full B+ on it, and the cathode of the buffer stage goes to the plate circuit of the xtal oscillator! This techniques works if the stages draw about the same plate current. The only real problem with this idea is that the cathode of one stage is hundreds of volts above ground, and most tubes don't have enough heater-cathode insulation to stand the strain. In the DX-40, the separate isolated heater winding takes care of this problem because it is not grounded.

This was probably done so that a single rectifier tube and B+ could be used, for economy. The screen modulator runs off a a tap on the bleeder string, which is OK for a few mills. The special power transformer was no problem for Heath 40 years ago. They were such a big customer that they would simply write up a transformer or choke specification and their supplier (Stancor, usually) would tool up to make them at a very low price.

> I have a DX-40 which
>is missing its power transformer, and I'm looking for some
>kind of substitute unit. What would it hurt to add V2 to
>the regular filament string, in the event I can't find a
>transformer with two 6.3 VAC windings?

The buffer 6CL6 would probably not last too long because of the excessive heater-cathode voltage (at least half of the high B+) that it would be subjected to.

Here are some ideas:

1) Hunt around for a junker DX-40 or maybe a DX-35 that has a good transformer.

2) Use a replacement with one heater winding, and install a separate small 6.3 volt filament transformer for the buffer stage.

3) Revamp the power supply to use a common transformer and an "economy (bridge) rectifier. The "economy" circuit gives two B+ voltages, the low one being about half the high one. (The DX-40 gets about 600 volts out of its power supply by using a 1420 VCT transformer, 5U4GB fullwave rectifier, and a choke input filter. A replacement may not be easy to find!). Then revamp the oscillator/buffer circuits to run in parallel on 300 volts. This change is not too complicated, and is easily reversed if the right transformer ever shows up. I can give more details on how to do it if you decide to go this way.

If you decide on 3), you'll probably need to use silicon rectifiers and add another filter choke and some electrolytics for the low B+.

Yes, I found this out by trial and error while replacing the power transformer in my DX-35. From my notes on the project:

When I first fired it up, only the driver tube lit up, and after a while it glowed brightly so I shut it off. I found that I needed a jumper from one side of the 6.3V TB to a common point on the aux power socket. But I also discovered that the driver looked like it was wired wrong. The cathode, suppressor, one side of the filaments, and filament supply were all connected together and to a resistor which

went to the grid and also to the HV from the osc. I separated the cathode, suppressor, one side of filaments and fil supply and low side of the grid leak, and took them all to ground. (The filament ckt needed a ground side somewhere.) I moved that HV lead to the HV coming to the driver's plate/screen ckts; figuring it was a continuation to the osc. When I powered it again, the driver's plate got red hot after 20 sec or so. Something's still wrong for sure. I was also surprised that the driver's plate was connected directly to the 600 VDC supply with no dropping resistor.

10/18/97

I put out a plea for a schematic on the net (newsgroup) and got one from Edward Zeranski, plus most of the manual. This shed light on things. There actually were no wiring errors. The oscillator tube and buffer (driver) are connected in series, so they each receive about 300 VDC. Because of this, the buffer requires a separate filament supply, so it doesn't short out the plate supply arrangement. I added a 12 volt transformer to the top of the chassis and rewired the 12BY7 buffer for 12.6 V filament voltage. First, I tested the transformer with 400 VDC pri to sec and sec to ground to make sure it could handle being connected to the cathode at about 300 VDC. It was OK.

Apparently my error didn't destroy that tube.

You may want to try "Antique Electronic Supply" at
"http://www.tubesandmore.com/". I was able to find
the 11-Pin power supply plug that Heath used on
a lot of their equipment. You may have to give them
a phone call, their on line catalog is a little
hard to search.

Also take a look at http://www.computer50.org

They have built a replica of the "Small Scale Experimental Machine" which was
the prototype of the Manchester Mk1 computer. The SSEM ran its first stored
program on 21st June 1948, You can download an emulator and try programming
it yourself... 32-bit registers BTW ;-) We are now coming up to the 50th
anniversary of the first computer sold to a private customer (sold in 1951).
I think by now we would have had fairly complex computers, even without
transistors, but they would have filled whole buildings!

As far as I can tell, they are error autoposts from an NNTP, (network news
transfer protocol) server, in other words a newsgroup server which is having

fits...you see, These Usenet newsgroups on the internet are not on one main server, it is made up of a network of thousands of different providers, one or any of which is having a problem posting a certain message or messages.

It is the same 'robot message' you may get when you try to send mail to a bad Email address. You could if you wish, notify the provider listed in the message of the offending server that there is a problem.

I just ignore it and move on to the next message. ;o)

Hello, Pat.
All the smart-alecs aside, your transmitter is not
"illegal." I've been a ham for near 30 years and
here's one thing I've learned- If a fellow ham
starts telling you that this or that is "legal"
or "illegal," you better check for yourself
because 9 times out of 10 he's as full of it as a goose. ;-)

But this ain't one of them times (Of course not!
I'm talking this time! (heh heh!).
There is no fixed standard for bandwidth of
an AM transmission, barring spurious emissions
like key clicks, parasitics or unintended mixing products
like "splatter." And remember- a lot of guys yell
"splatter" when the real problem is that they
have their noise blanker engaged....duhhhh!

There is nothing illegal about your AM transmitter,
assuming it's run according to manufacturer's specs.
The engineers who designed it had to follow certain
standards and those standards will do fine on the
ham bands. It would be better if you used a
graphic equilizer in the audio line to the transmitter
so you can cut down on bandwidth. I'd suggest cutting
everything under 100 cycles and above 4000 cycles
as a starting point. No one is going to come clap
you in irons and if someone on the bands tells you
that, he's wrong.
Kind Regards,
Dave AB5S

Oh, the humanity, how far technical knowledge has sunk.

In the 60's every ham knew you needed a sharp crystal filter to cut those pesky sidebands.

I suggest you get two large crystals of potassium cyanide (available at bigger pest-control stores). Rub them with sandpaper until they're 1.60mm (160 meters divided by the number of thousanths of an inch per inch) thick.

Now warm up your transmitter real well (turn all the knobs all the waaaay to the right), and drop the crystals onto the hot output tubes (if the crystals slide off,
the tubes aren't hot enough yet). You want the crystals to melt and siizzle.
Now you wont have any problems with the FCC....

2528. Re: What a Bargain !

Newsgroup: rec.radio.amateur.boatanchors

Message-ID: <392BECFD.1CB4CD4B@a.m>
Source record: 66201

If you analyze the situation, perhaps the price for this SX-88 ***IS A BARGAIN!!!!***

Well, let's see, in 1954 or 55 when the receiver was made a new car would be $2,000 maybe. Now a much better, more durable and long lasting vehicle is maybe 10 times that.

Where I live my house was a new tract house in 1955 and cost $15,000. One of the identical houses with a very minor addition to it for extra space sold for $1,100,000 a month ago after being on the market for 3 days with multiple offers over the asking price. That's a price increase of over 70 times? Make it a 60X increase for an identical house since this one had a very minor addition to it.

Without looking up actual cost of living increases over that period of time, let's use 10X as a rule of thumb and be conservative to base our prices on.

This receiver is for all practical purposes "new" and maybe even better than new with some modern replacements for some components with limited life as a result of our nearly 50 years of hindsight. Don't kid yourself, the Hallicrafters that were NEW during that era were nicely built but a bit of thick paint on the back panel wasn't unusual! Hey they couldn't even decide on proper knobs or color paint on many of their receivers and transmitters!

So, 1/10 th of $6800 is $680. This is equivalent to buying the receiver in 1955 for $680 then.

** Is that unreasonable? What did it sell for new? My 1955 handbook says $595 -- not that far from my ballpark equivalent of $680.

I'm sure that only a few were willing to pay that much for the receiver in 1955. My NC-125 which was a very expensive Christmas gift in 1952 when I was an SWL was ($109 with speaker -- dealer's price not retail) and my parents and I considered it a very expensive gift.

So, given the scarcity (not many made and few for sale just like houses around here) I think that though the price is astronomical, it may be more reasonable than we all want to admit. Items that are considered desirable and scarce these days demand a high price. We are exposed to these high prices due to the connectivity that the Internet provides with the worldwide market and the possibility of finding that "one person" with both the strong desire for that item and the money to pay for it. Something that was very very difficult to do in the "olden days."

If one were to use the same type of extrapolation, a Collins KWS-1 would cost $15,000 or more I'd suspect. Maybe rather than gripe about Hallicrafters prices, we should be buying up "mint" KWS-1s for the going

price of $2,500 or so but here again there are more of them around than there are SX-88s!

I'm afraid as much as we'd like it be so, we "ain't in Podunk anymore!" we are now citizens of a vast world and the market is worldwide!

I need the meter sensitivity pot for a Collins 75A-4 receiver - mine is one of the earlier models where the pot is mounted on top of the chassis. Anyone have a parts rig or know where I can find a replacement pot? Please reply via e-mail.

From: "Bob Bachus"
Subject: Drake 2-B dial mod

I don't know if this will help or not, but I ran across these guys
searching for something else. I have two 2-B's and someone had
attempted to increase the tuning ratio by reducing the drive shaft
diameter on a lathe. This however reduces the drag - less surface area
for the string - and it makes slippage a problem if you turn the knob
too fast. The reduction gears offered below - and I know nothing about
the company - may be a solution. Please keep me in the loop - I would
be interested in how you resolve the problem.

From: n2cqr@erols.com (Bill Meara)
Subject: Drake 2-B dial mod

Thanks to all who provided advice and suggestions.

Last night I pulled out the old reduction drive I did so by just loosening the shaft and putlling it out (without messing up the string arrangement!) Sure enough, the drive was really very loose. It liiks to me like it may have been damaged at some point. I move a lot, and I think the tuning knob may have been hit an pushed to the side at some point, seriously loosening up the whole drive.

I found an old catalog that offered replacement drives: Oren Elliott Products of Ohio. I last dealt with them several years ago and they were very friendly to amateurs. I was please to find them on the web (just to a Yahoo search for Oren Elliott). I've ordered a replacement drive. I'll let you guys know how it works out. I'm looking forward to smooth and reasonably slow tuning with my 2-B.

BTW: For those of you who have un-moded 2-Bs: How does the string shaft come out through the front panel? Is there just a hole there? It looks like the diameter of the hole on my front panel was significantly increased to accomodate the reduction drive.

Eric,

I have had a new PL-172A with socket for a number of years. I was
curious as to what amateur equipment the tube might have been used in.
Now I
know! We use to use the tube in a Military transmitter (AN/FRT-53).

If you happen to run across someone that needs this tube w/socket,
send
them my way would you?

Thank You,

>with REV and I'll see if I still have a book on the units. I'll see if I
>can give you a little more help.

I looked over the unit and found a bunch of numbers with revisions. I
think these are the ones you want.

Transmitter type ET-55-A
on the transmitter is 4ET55 and then handwritten by it is A51

in the receiver is 4ER39 and then hand written by it is C79

There were two large tubes marked 7984 USA and one small tube (did not
get a number on it) that were in heat sinks.

On the Transmitter cover was a small diagram with 19C303686P2 REV 3
on the boards in the transmitter PL19E500877g 6 and PL19C30354G8

On the receiver cover was another diagram with 19D40481P6 REV 3
on the boards in the receiver PL19E500873G6 REG 6

On part of the panel with power and volume was the numbers
4EP38A12 REV A and 4K010A12 REV A

There were 4 transisters in the case by them selves with the numbers
185 700PI 7752
185 115876 7445
185 6760PI MEX 8426
DELCO GM 115267 7109

I know that you did not ask for these but I found out that at one
point someone decided that it did not need full power and put in
smaller transisters. I guessing that it is one of these parts.

I hope that these will be one of the ones you are looking for. If not
let me know and I will look again.
Thanks for the help.

From: "Mike Swift"
Subject: Heathkit knobs & paint

Hi all

I've just acquired a lovely old Heathkit SB-102, and I'm on the look out for
two or more of the dark green Heathkit knobs as supplied with the SB series
of radios. Must be in good condition, with silver inserts intact. If you
have one or more of these going spare, please e-mail me with the price you'd
want inclusive of P&P to the UK. Alternatively, if you know of a supplier
for these knobs, I'd really appreciate their contact details.

I'm also looking for one of the solid metal dial calibration knobs for the
same series of radios, but again it must be in very good condition - the one
I have has been polished so much that the shiny coating has all but
disappeared.

Finally, anyone know of a contact in the UK or abroad who can supply the
original Heathkit bluey-green paint? I'd like to have the case of the radio
re-sprayed, but only if I can find the original colour.

Thanks in advance.

Subject: NEED HELP with ILLEGAL BROADCAST XMTR

I operate an old AM Broadcast transmitter on 160-meters.

Is there a way I can easily shunt the illegal high-frequencies to
ground so that I can comply with FCC bandwidth rules.

I was thinking of installing a mechanical filter in series with the
mike cable.....maybe a 5pF 10Kv vacuum cap in series with the
mod transformer......how about a tuned band-stop filter on the
RF output tuned to each of my lower and upper sidebands.

Any other Broadcast Transmitter owners out there with more ideas?

73.........Pat, WB9GKZ

Pat

Anyone knows that a mechanical filter is an rf devise and has to be put
in the antenna line.

What "illegal high-frequencies?" There are no specified bandwidth in the
FCC rules other than "good engineering practice." If you think the
transmitter was poorly engineered, then limit the audio bandwidth at the
low levels (i.e. the line-level feed to the transmitter). You can built
a filter or use an equalizer to cut the higher frequencies.

Date: Tue, 23 May 2000 19:50:07 -0500
From: "Bismarck Wichy"
Subject: NEED HELP with ILLEGAL BROADCAST XMTR

Pat,

The only way to do it is to control the audio freqs going into the high level modulator. There are many ways to do this.

You could make yourself a low pass audio filter going into the audio pre-amp stage. This works but I don't suggest it because you will have to use a computer to model the filter and then build it. There ARE formulas you could use but in the end, it's pretty much a cut and try thing... as all of our voices are vastly different.... but you could do it and if done correctly will provide average performance. You could add a volt amp and make an ALC circuit of sorts.

The next method I suggest is to purchase an active audio equalizer. There are a bunch of cheap ones for CB'ers but I recommend going with W2IHY's unit. I heard many 20M DX'ers using it and can be adjustment many different ways... go to WWW.W2IHY.com for a demo on it - even comes as a kit.

The last way is the way "real" broadcast stations do it. Purchase an Orban Optomod (or OptoCrud as we BC engineers like to call it). It cost 6 g's BUT it is well WORTH it. It's a audio equalizer and compressor built into one. When properly setup for AM - nothing can touch it. PERIOD. You will have to buy it new as you seldom find it in the used market and when you do they are almost the same price as new.

A cheaper route is to use a cheaper commercial audio limiter - compressor like CBS Labs Audio Solidstatesman. You can find these all over the place for $450 and that's about what they are worth.

So to sum it up - limit your audio freqs to restrict your RF bandwidth.

I assume now you have nothing but a Mic to your broadcast transmitter. As you found out - it doesn't take much to go over 100% modulator creating splatter and making you "Mr Popular" with your SSB/CW buddies. If your "flying by the seat of your pants" and your transmitter has a "modulation meter" I suggest you stay less than 30% on average - your peaks will still be hitting 90 and 100 + even then.

If you have an OptoMod you will find your average will be at 85 - 90 % while peaks will still be at or below 100% (or 120% Positive if your transmitter is setup for it). Like I said - it's expensive but worth it....

If you need more help, give a call to your local AM station. Most AM BC engineers are hams. and who knows... if you like tinkering with your toy - you might find a job doing it for real....

hope that helps ... WD0HCO

Hey Pat, maybe you could find one of those foreign correspondent courses about radio and stuff. You know like the voice of america guys took. I bet they know how to limit the bandwidth with their antennas. Then you wouldn't be risking burning up those mechanical filters.

Geezz, look at what you've gone and done now!

Here is a suggestion.... take it for what it's worth.... What about
using FGS for those interesting eBay auctions and other comments?

FGS stands for "FOR GOODNESS SAKES"

It goes along with FS and FA subject headers.

Lets those that want to read that sort of stuff (I do) and allows others
to pass on it.

Sound like a good idea?

From: "Leith Jennings"
Subject: Suitable replacement for Ranger insulated VFO coupling

I had the same problem and solved it by the use of a Dremel moto tool to pop out the rivets. Then I used the Dremel to sand down a piece of PC board to about half thickness. Then I marked out the board and drilled 2.5mm holes and used 2.5mm screws to put it back together. The Dremel was then used to grind down the screws to rivet size and the whole thing was far better than the original. You do have to be careful in getting the marking out correct or the two sides will not turn concentrically

My Ranger is literally a total rebuild and it's coming along quite nicely. Hope this helps

$30,000? Prices must be coming down. I saw a black '57 convertible
with red interior and tri-power with a STARTING bid of $35,000 in Sun

Valley Idaho in 1988! Don't remember what it finally sold for.

Frankly, even fully restored, a $6800 pricetag is a wee tad on the nuts
side. I'm sure the fellow who sold the radio is quite happy with the
arrangement, however ;-)

A 1957 Chevy convertible is one thing, but an SX-88 ... well, it's just
another radio ... :-)

Why does it auction so high? I notice the sx-88 model came out in
1954-55. Surely some of the later models, the sx-101, for instance,
were better electronically?

Not many made and hardly ever see a good one for sale.

Rarer than the SX-115.

Some people have more money than common sense. Common sense isn't very
common.

Subject: THE ! ! ! Classic Hallicrafters - F/A

If you had lots of money then how much you pay for something is really
not an issue and has NOTHING to do with common sense. Common sense is
when the guy buys the item for big money and then throws it into a leaky
storage shed never to be seen again. I have been a witness to this kind
of sickness to many times.

Take the advertisements on TV when they tell you to buy their fancy new
Truck for $35,000 then take it out into the roughest outback you can
find and distroy it. So why the H buy a new Truck to do this.

Same goes with the radios. Might as well buy an S-120 for $500 and
destroy it.

Subject: Tubes for sale, mobile, ham, cb types

I have the following tubes for sale. These were purchased in a GE Mobile Communications tube caddy and are all New in the Box, except for 2 of them which have no box but are still new. All are GE manufacture unless noted. They date from the mid to late 60s, and have been stored in a basement since then. Guaranteed to be new, returns OK unless filament is gone, buyer pays shipping both ways. Prices shown are per tube, and are about 70% of list price. Multiple purchases will be discounted, shipping is extra. HEY, If you don't like the price, make an offer, I might say OK! Email with any questions but I won't be in email contact from 5/24-25 and will respond on 5/26.

Thanks for the look, 73... Phil

TUBES FOR SALE - MOBILE COMMUNICATIONS TYPES

Subject: URL or Source for Sam's Photofacts?~~Info on Sonar Model G

Hello,

Bought an old Sonar Model G CB at Dayton mostly for nostalgia's sake.
Would like to try to make it operational again and perhaps put it on 10FM.

Any source info would be deeply appreciated. Please E Mail direct.

From: "Andrew"
Subject: Wanted: FT200 schematic as GIF or JPG

If anyone out there has both an FT200 schematic and a scanner and is
prepared to take the time to scan it in and email it to me it would be much
appreciated.

I bought the set at a rally and was promised the original manual in the post
but it hasn't turned up. I'm hoping to sort the set's AGC system in time
for a public event station this coming weekend. I guess this is short
notice !

If anyone can help it would be much appreciated.

Keep that BA iron warm :)

From: Will
Subject: What a Bargain !

Just when you thought eBayers couldn't get any sillier! This SX-88 closed at $6800.00! I know, it truly is one of the rarest of radios, and the rig is one of the hottest receivers ever designed, current models included, but let's touch our feet down on Earth for a moment!

The photos are very good, and reveal, contrary to the text decription which claims the knobs (and *everything* else) to be perfect. The knobs have bits of pitting, scratches, mild discoloration, and worn finish. The re-paint on the black trim parts of the cabinet appears to be uneven and visibly thick in spots. The lettering on the front panel is good, but in spots it is slightly faded. Overall, this is a quite good looking rig, but not "mint", whatever that means.

I'll take it on faith that the radio works flawlessly. But $6800.00 is far too much money for it! I would say $3K to $4K, certainly no more. Not that I would pay that much for *any* radio, no matter how much money I had burning a hole in my pocket, not unless it was early Marconi or Collins prototype! Or maybe Mahlon Loomis' induction set! Once again, we are reminded how badly internet auctions warp value--this price has nothing to do with history or engineering; it's about wish-fulfillment and instant gratification. I wonder if the "winner" will follow through on his bid? I suppose that will depend on which he possesses more of--money, or brains?

Pat,

Actually what the guy probably meant when he said broadcast transmitters were illegal on the ham bands was there "size". The legal size is a 19 inch rack width and most broadcast transmitters are much bigger than that! If you could dismantle it and put it into smaller cabinets, I am sure it would be ok then. Of course you still need to come up with a way to suppress the negative splatter though.

Gee, rather than going through a NG charger change exercise why not satisfy your desires "BY GOING TO AUCTIONS SITES YOURSELF AND READ THEM"? That way you gain satisfaction without bothering those who aren't interested.

Here is a suggestion.... take it for what it's worth.... What about
using FGS for those interesting eBay auctions and other comments?

FGS stands for "FOR GOODNESS SAKES"

It goes along with FS and FA subject headers.

Lets those that want to read that sort of stuff (I do) and allows others to pass on it.

Sound like a good idea?

Pat Sed:

> I operate an old AM Broadcast transmitter on 160-meters.

Few years back, we had somewhat the same problem around here
on 2M. Some guys decided that an FM signal shouldn't occupy
much more BW than a CW sig. Someone figured out where the
deviation pots were in their radios and they turned them down to, I
think, +/- 3Kcs....It was a royal Pain in the tush to have these
"enlighted" ones around, because after you cranked up the volume
to hear them, someone w/the customary +/- 5 Kcs. would come on
and blow your speaker cone across the room.....Of course, nobody
could tell 'em any different, because *THEY* had 1X2 calls, big
Swedish cars, and 300+ countries, compared to *our* HR-2B's and
HW-202's...

The channel width in the AM BC band is 10 Kcs. Most of the older
Xmttrs I ever had experience with started to roll-off rather drastically
above 4 Kcs. Some even sounded muddier than an ATT "long
lines" circuit...

Splatter, and all the other byproducts of over-modulation, are a
different story, though......

That's why you put "compression" in the audio chain, Gary.
If you put enough compression in the line, you can just
fit it in the 19 inch rack if you push hard.

Source record: 66210

the 300 is a better overall receiver as far as all aspects. But is that not true of all Ham band only Vs. General coverage receivers? The answer from most will be yes. The virtues of both receivers must be decided on by what you intend to do with it. The regular 183 by the way is better than the 183d as the latter suffered from its dual conversion if shifting around a lot even after alignment as they have aged. Hence much worse sensitivity on the higher bands. All of them are in my opinion (remember I said My opinion) are very good ol boatanchors in the literal sense...p

Steve,

The Sonar Model G is in Sams Photofacts volume CB-6. I have it at home.
I can make you a copy of it if you like. I wouldn't want to see you hack
the set up to put it on FM, but it would be great on 10m a-m. Those old
Sonar CB's always sounded great with their push-pull plate modulation,
especially when a good mic was used!

If you wanna get on 10m FM, I have a nice Comtronix FM-80 10m FM rig for
sale or trade! :)

Thanks Leith,

I was kind of right in step with you on the pc board material. I'm in the process of procuring some "filler" layers of glass epoxy pcb material which is .007" thick. This should be just right to allow some flexibility. I think I have the answer to maintaining concentricity of the 2 shaft couplings. First drill a hole in the material the same diameter as the shaft coupling. Then use the drill as a shaft, by running it through 1 coupling then through the material, then through the other coupling. tighten the screws, and mark the holes on the material. Haven't tried it yet, but sounds good in theory.

It turns out that L. Ron Hubbard (yes, THAT L. Ron Hubbard) of Scientology fame apparently was involved with maritime radio direction finding. Here's the amazing story:

> Anyone have the alignment procedure for the Tempo One/FT200?
>
>
No I don't but this will probably do just fine.

Set your preselector to the center of the band you are working. Start at the ten meter band first. Then go to the 80 then 40 etc.

Dial up the center of the band you are aligning.

Turn on the xtal calibrator and adjust all your mixer, driver, amplifier pots for maximum signal on s-meter. You will have either 1 or 2 adjustable caps for the transmitter section. After you get the rx up to snuff, and without moving the preselector, adjust them for maximum RF output. Remembering to keep the drive low, or you will overtax the poor final and power supply.

Hope that helps.

As for the oscillators a frequency counter would be nice. Otherwise use a external rig to check it with.

For the U/Lsb adjustments...The same. Use a known good rig and adjust for same quality on U/L positions.

Dan/W4NTI

So.... let's say you're running a BTA-5F on 160 meters....
All the cabinets together are... ohhh.....about 15-20 feet wide.

How many db of compression do you run....
or should it be expressed in pounds per square inch?

My guess is db. Maybe fitting into the 19 inch rack is what
they mean by gain "reduction".

And if you're gonna run it on 80 meters, do you need more or less?

(Damn, I haven't had this much fun with a thread in a long time!)

Hi all,
I just picked up an old drake Tr-3 transciever and having no experience with tube gear, and no manual, i was wondering if anyone could help me get it on air. It seems to work fine and it's real pretty. But I'm not real sure about transmitting. I got a mic but it dosen't have a PTT button. Which of the three 1/4" jacks on the side is for it? How do I adjust the PLATE and LOAD controls?and those unlabeled knoblets on the side? what are they? do i need a tuner/swr meter? any info you think could help me would be greatly appreciated.

From: Lamb <k7fm@teleport.com>
Message-ID: <vG1X4.7714$NE3.383686@nntp1.onemain.com>
Source record: 66242

Many years ago my friend had an NC 183D which he was very proud of. One day the local radio dealer talked him into bringing home a Drake 2B. The 2B ran circles around the NC 183D. It was more sensitive, more stable, more selective and the frequency calibration was more accurate.

We checked the alignment and found it was within specifications. He sold his NC 183D and bought a Drake 2B.

The NC 183D is dual conversion so has less image problems than the 183. But, it is also noisier internally.

Neither receiver will receive as well as almost any modern receiver. Both look like they are out of the 50's and are nice to look at and heavy. It that is what you want, buy either or both.

Message-ID: <959112683.56642@shelley.paradise.net.nz>
Source record: 66278

I had the same problem and solved it by the use of a Dremel moto tool to pop out the rivets. Then I used the Dremel to sand down a piece of PC board to about half thickness. Then I marked out the board and drilled 2.5mm holes and used 2.5mm screws to put it back together. The Dremel was then used to grind down the screws to rivet size and the whole thing was far better than the original. You do have to be careful in getting the marking out correct or the two sides will not turn concentrically

My Ranger is literally a total rebuild and it's coming along quite nicely. Hope this helps

Hey Pat, maybe you could find one of those foreign correspondent courses about radio and stuff. You know like the voice of america guys took. I bet they know how to limit the bandwidth with their antennas. Then you wouldn't be risking burning up those mechanical filters.

Geezz, look at what you've gone and done now!

On Mon, 22 May 2000 21:39:14 -0400, Jim Campbell <JCampbell@3n.net>
wrote:

>Send me the ER- number off of the receiver and the complete ET- number
>with REV and I'll see if I still have a book on the units. I'll see if I
>can give you a little more help.

I looked over the unit and found a bunch of numbers with revisions. I
think these are the ones you want.

Transmitter type ET-55-A
on the transmitter is 4ET55 and then handwritten by it is A51

in the receiver is 4ER39 and then hand written by it is C79

There were two large tubes marked 7984 USA and one small tube (did not
get a number on it) that were in heat sinks.

On the Transmitter cover was a small diagram with 19C303686P2 REV 3
on the boards in the transmitter PL19E500877g 6 and PL19C30354G8

On the receiver cover was another diagram with 19D40481P6 REV 3
on the boards in the receiver PL19E500873G6 REG 6

On part of the panel with power and volume was the numbers
4EP38A12 REV A and 4K010A12 REV A

There were 4 transisters in the case by them selves with the numbers
185 700PI 7752
185 115876 7445
185 6760PI MEX 8426
DELCO GM 115267 7109

I know that you did not ask for these but I found out that at one
point someone decided that it did not need full power and put in
smaller transisters. I guessing that it is one of these parts.

I hope that these will be one of the ones you are looking for. If not
let me know and I will look again.
Thanks for the help.

2581. SB-220/221 Bandswitch/entire assembly

Hi, I have a complete SB-220/221 bandswitch assembly with input circuit and tank circuit its mounted to the "L" bracket chassis and the whole unit can be dropped into an SB-221 for complete 10 meter coverage or to repair bad SB-220 switch. It is easier to replace the whole assembly than just the wafer. ONLY 3 solder joints, the rest is mechanical work. COMPLETE assembly with chassis for drop in ease!! $135.00 shipped.......SB-220/221 load capacitor replace that arced/charred one in your rig with this original replacement $45.00 plus shipping......money order or paypal,,,,,e-mail if interested...73 Louie

Source record: 66289

Just when you thought eBayers couldn't get any sillier! This SX-88 closed at $6800.00! I know, it truly is one of the rarest of radios, and the rig is one of the hottest receivers ever designed, current models included, but let's touch our feet down on Earth for a moment!

The photos are very good, and reveal, contrary to the text decription which claims the knobs (and *everything* else) to be perfect. The knobs have bits of pitting, scratches, mild discoloration, and worn finish. The re-paint on the black trim parts of the cabinet appears to be uneven and visibly thick in spots. The lettering on the front panel is good, but in spots it is slightly faded. Overall, this is a quite good looking rig, but not "mint", whatever that means.

I'll take it on faith that the radio works flawlessly. But $6800.00 is far too much money for it! I would say $3K to $4K, certainly no more. Not that I would pay that much for *any* radio, no matter how much money I had burning a hole in my pocket, not unless it was early Marconi or Collins prototype! Or maybe Mahlon Loomis' induction set! Once again, we are reminded how badly internet auctions warp value--this price has nothing to do with history or engineering; it's about wish-fulfillment and instant gratification. I wonder if the "winner" will follow through on his bid? I suppose that will depend on which he possesses more of--money, or brains?

Thanks to all who provided advice and suggestions.

Last night I pulled out the old reduction drive I did so by just loosening the shaft and putlling it out (without messing up the string arrangement!) Sure enough, the drive was really very loose. It liiks to me like it may have been damaged at some point. I move a lot, and I think the tuning knob may have been hit an pushed to the side at some point, seriously loosening up the whole drive.

I found an old catalog that offered replacement drives: Oren Elliott Products of Ohio. I last dealt with them several years ago and they were very friendly to amateurs. I was please to find them on the web (just to a Yahoo search for Oren Elliott). I've ordered a replacement drive. I'll let you guys know how it works out. I'm looking forward to smooth and reasonably slow tuning with my 2-B.

BTW: For those of you who have un-moded 2-Bs: How does the string shaft come out through the front panel? Is there just a hole there? It looks like the diameter of the hole on my front panel was significantly increased to accomodate the reduction drive.

It's a lot simpler just to pull one of the modulators.
Half the number of tubes in the modulator....
half the number of sidebands...half the bandwidth!

And as a side benefit..... look at how much you'd save
by not lighting that other filament!

Mike,

Your theory is flawed. Because you are cutting the bandwidth in half, the heat from the finals will also be cut in half, which as you pointed out may not be desirable. Your idea sounds good on the surface but I am not sure it will accomplish all that is intended. Of course the multivibrator will increase the efficiency (reason for the drop in heat) but this will only work properly if the ac power phase is connected properly.

I have a yaezu ft-101ex that I would like to sell or trade. Radio recieves well, transmit is low, could be tubes could be something else. I just want a backup radio and I don't want to put money in to it. MMake me an offer, I will considder trade with cash if you would like, just something for a backup radio, a ts130 or something, even a 2950 if the deal is right. Email n1umj@mediaone if you might be interested. The radio is a backup and I don't want to put any money in to a backup radio especially where my main radio is so reliable, I just want a backup just incase. thanks,

Source record: 66047

Hello All,

Was wondering if anybody has any information
on this rig. I recapped it and got it running. Looks
like the thing can crank in about 30 db of limiting
and is balanced in and out. Vintage lineup, P/P 6J7'S
P/P 6SJ7'S to P/P 6F6'S. A 6H6 sends control voltage.
Adjustable "Recovery Time" of 1 to 5 msec. A multi-meter
switched to read the KATH. "voltage" of all 6 active tubes
and a position for "limiting" in DB. Rack mount with
a medium dark brown 19"X14" panel with a removable insert
panel that lets ya get at the tubes. It's so UGLY I have
to put it on-line!! Any info greatly appreciated.

It WAS an SB-301. When it repaired itself, I noticed the RCA Compactron tube on the pcb. I had an SB-301 as my first amateur-only receiver.

Shack Spring Cleaning List 5/24/00

All items are as is. Items will be listed as working or not. Most items I can supply digital photos of (or can take). Prefer payment to be US Postal, Bank or International Money Orders, checks are ok, but will hold up shipping until they clear the bank. Shipping is additional. Digital pictures can be supplied for most items. On with the list.......

National SW-3 using the 32 and 33 tubes....this rig is clean and works well. It does have a few items to note....a "bird brain" put a heaphone jack in the lower right corner of the rig (removed now). I carefully filled it and texture painted the patch job, which matches the original black texture paint very well....The repair job is virtually not visible as pictures show. One of the coil sockets was cracked...just a bit and was repaired. An original National coil set for 80 meters is included with the rig. Also, I believe I have 4 empty coil forms, maybe 6..... made by a fellow in IN...that will go with the set for your winding pleasure. These are very nice quality coil forms. This is really a neat radio. The best regen out there....(my opinion) Unfortunately the doghouse power supply does not come with the set. I used it with a little hombrew power supply that I wish to keep. Selling Price for the above $400 Prefer pickup, but will ship. OFFERS??

Military Spy Radio...GRC-109.....I have the 3 pieces, Transmitter T-784, Reciever R-1004 and Power Supply PS-2685. This rig works quite well. The reciever was aligned and is quite accurate. A manual comes with the unit. Selling price $300 Unit is heavy, but shippable.

AEA CP1....RTTY demodulator terminal unit. Not sure if it works, it was used with a C-64 on RTTY. It is clean and unfortunately I dont have the manual for it. Price: $25

Drake C-Line... R4-C, T4XC, MS-4 and AC-4 all interconnecting cables and manuals. no mic....160-10mtrs... Sherwood mods are in the R4-C, all xtal filters too. This is a great station, used it to work through RS-12 all the time....nice for split band operation...but I cant keep all these rigs.....hi Price: $545 I will throw in a new set of finals too. Prefer pickup, but will ship...heavy

SBE-34....This is a compact travel transciever, solid state, except for the driver and finals. It works, but could use an alignment. The service manual an operating manual come with the rig....The original SBE mic does too...this rig also has a Collins 2.1khz filter in it as originally supplied. The radio is clean and in good condition...it does not appear to have been in a smoking enviroment....I dont smoke...so none of these rigs have been exposed while they have been staying here in the shack :-) This rig is also capable of 12 VDC operation, though I have not tested that feature. Price: $175

Morrow Twins with Homebrew Supply......The MB-560A and the MBR-5. The two rigs are joined together (by their feet), but can easily be separated. They work well and the supply easily powers them....it is a beast....hi A manual copy comes with the setup. I prefer pick up on this item, unless the Power supply is not wanted. Power supply is not shippable. Price either way is $325

Heath HG-10 VFO....Good condition, but could use a bit of tlc. I have never used this. It was purchased as a spare that was never needed....Price: $50

Harvey Wells "Z Match" ....this has a stock wattmeter/swr meter in it....nice condition. No manual. A rare unit. All original. Price: $165 (Holding)

Yaesu FRG-7 Shortwave Reciever....This unit has many of the "Gilfer" mods. Works ok but, could use a fresh alignment. (Can be tricky to lock the mhz, but it does lock.) Rig is clean and has great audio and accuracy. Manual comes with unit. "D" internal battery tray is NOT in the radio. Price: $175

Hallicrafters S-38.....Rough condition, rusty on the inside, but with "tlc" could be brought back, not working, but original right down to all of the capacitors from what I can see. Missing bottom cover, was cardboard I believe? Price $35

Heath HD-1418 Audio Filter, brown series....works ok , but speaker output low. Good condition. Comes with original manual. Price: $40

Drake Theta RTTY Terminal unit, Mint condx stand alone unit with a B/W monitor. Original manual. $215

Universal M-900 Shortwave Decoder with B/W monitor. All in excellent condition. With manual. This is a stand alone unit....no other computer needed $300

Heath SW-717 Shortwave Receiver.....excellent condition $135

Heath HR-1680 with the HS-1661 Speaker.....very good condition, Receiver works well and looks good too! Will not separate the pair. Manual included $215

Kenwood AT-200 Antenna Tuner good condition, manual included $150

Lampkin Freq Meter good condition, no book $35

2602. FA: 1950's Gonset De-luxe Triband HF Converter

Speaking of PCB (Printed Circuit Boards) and a bit of nostalgia wasn't it Zenith that used to advertise (50's / early 60's ?) that they used 'Hand Wiring' instead of using those inferior, troublesome printed circuit boards in their TV's ??

A million bucks for a "tract" house??? Where do you live? You can get a nice
brownstone in Manhattan for less than that!

Seriously, this sort of then-and-now inflation/value analysis is deeply flawed in
its very concept. Even the most gifted economists get into deep trouble when
trying to calculate what the contemporary selling price of goods from a previous
era might be. All those subordinate comments in TV documentaries to the effect,
for example, "in 1825 the first steam-driven industrial potato mashers cost
$185.33, and that would cost blah-blah million today. . ." are nonsense, and only
serve to awe those who, by no fault of theirs, don't know any better. The people
who study this sort of stuff all day can't even come up with a consistent model
of inflation that would allow them to agree on the current value of a
1930/1875/1825 dollar, ad infinitum. Once you reach back more than about 25
years, economic models become completely unreliable, the reasons are obvious, so
there really isn't any point in talking about "value" in this way. Money, in a
qualitative sense is what has been most subject to inflation up to about 1900.
Before then, increasing geometrically as you go back, money was far less
important or central to life, and was used much less often than now, certainly
not on a daily basis.

Add to the mix that we are discussing the value of a thing that is neither a true
antique (as Marconi's 1896 demo gear would be if it still existed), nor is is
still in production, and the problem is compounded. Also, several generations of
radio receivers have developed since 1955, when the SX-88 was introduced. So,
from both an engineering and a marketing standpoint, the rig is hard to evaluate,
because there isn't anything on the market today that is directly

comparable to
it. The only terms that make any sense when coming to a consensus about
the
dollar value of an SX-88, or most any other ham or shortwave radio of
the era
1930-1975, is its aesthetic appeal, and its place in electronic history.
The list
or street price of the SX-88 (or any other model) when new is really not
at all
relevant, since you can't make a direct, close comparison to a rig in
current
production. Performance isn't a primary consideration of absolute value
either,
since there are many receivers since 1955 that substantially exceed the
SX-88 in
all measureable specs. What we are left with is how attractive the model
is, its
relative importance as a piece of technological history, and to an
extent the
individual set's condition. Of course, if you were a 17-year-old new ham
in 1955,
you may have a certain nostalgia for this rig. There is not one thing
wrong with
that, and who can argue that nostalgia and emotion don't play a large
role in
what we buy, and how much we pay for it. In a way that I can neither
define nor
justify, I think these subjective measures are entirely appropriate and
sensible.
The only problem is that my nostalgia is apt to be quite different from
yours,
since I was 17 in 1979. Accordingly, I tend to be dewy-eyed about Drake
C-lines
and TR-7s. Is a C-line worth $6800.00? Not yet, though one day it may
be! But if
that day comes, and that price is paid, it won't be because of any cold
calculus
of adjusted-year-dollars, or comparisons of new prices and that year's
state-of-the-art.

I am hopeful that keeping and operating grand old radios will remain
within the
reach of the majority of us who have an income of less than a hundred
grand a
year. The worldwide market has a very short attention span, and is
fickle. That
is in part at least balance to the finite supply of BAs. It is that
finite supply
that alters and corrupts irrevocably the mantra the astronomical eBay
prices are

OK because that is just supply-n-demand, that is just the free market, that is
just capitalism. Where things that have not been manufactured for over 30 years
are concerned, this marketplace bears closer resemblance to the market for
religious relics in medieval times than to modern capitalism. Do we all know how
honorable, admirable, and just that was?

de Will KD7BFX

If you analyze the situation, perhaps the price for this SX-88 ***IS A BARGAIN!!!!***

Well, let's see, in 1954 or 55 when the receiver was made a new car would be
$2,000 maybe. Now a much better, more durable and long lasting vehicle is
maybe 10 times that.

Where I live my house was a new tract house in 1955 and cost $15,000. One of the identical houses with a very minor addition to it for extra space sold for $1,100,000 a month ago after being on the market for 3 days with multiple offers over the asking price. That's a price increase of over 70 times? Make it a 60X increase for an identical house since this one had a very minor addition to it.

Without looking up actual cost of living increases over that period of time, let's use 10X as a rule of thumb and be conservative to base our prices on.

This receiver is for all practical purposes "new" and maybe even better than new with some modern replacements for some components with limited life as a
result of our nearly 50 years of hindsight. Don't kid yourself, the Hallicrafters that were NEW during that era were nicely built but a bit of thick paint on the back panel wasn't unusual! Hey they couldn't even decide on proper knobs or color paint on many of their receivers and transmitters!

So, 1/10 th of $6800 is $680. This is equivalent to buying the receiver in 1955 for $680 then.

** Is that unreasonable? What did it sell for new? My 1955 handbook says $595 -- not that far from my ballpark equivalent of $680.

I'm sure that only a few were willing to pay that much for the receiver in 1955. My NC-125 which was a very expensive Christmas gift in 1952 when I was an SWL was ($109 with speaker -- dealer's price not retail) and my parents and I considered it a very expensive gift.

So, given the scarcity (not many made and few for sale just like houses around here) I think that though the price is astronomical, it may be more reasonable than we all want to admit. Items that are considered desirable and scarce these days demand a high price. We are exposed to these high

prices due to the connectivity that the Internet provides with the worldwide market and the possibility of finding that "one person" with both the strong desire for that item and the money to pay for it. Something that was very very difficult to do in the "olden days."

If one were to use the same type of extrapolation, a Collins KWS-1 would cost $15,000 or more I'd suspect. Maybe rather than gripe about Hallicrafters prices, we should be buying up "mint" KWS-1s for the going price of $2,500 or so but here again there are more of them around than there are SX-88s!

I'm afraid as much as we'd like it be so, we "ain't in Podunk anymore!" we are now citizens of a vast world and the market is worldwide!

Yes, a number of procuts like this are available through catlog
electronics parts vendors, and also at art supply and hobby stores.
Antique Electronic Supply is one such outlet. They are at www.tubesandmore.com

So the description claimed.

The pictures, however, told another story.

Pitting, scratches, and missing detail on at least three of the large knobs. A very amateurish repaint on part of the case. Minor fading of some of the lettering.

It still looked very good, but it certainly was not "Fully Restored" and that price is more in line with what you would expect for an original radio--unrestored perfect condition.

The buyer is going to get what he deserves (assuming he actually follows through with the deal--fully one-third of all winning bidders on eBay lots that close at over $500.00 never fulfill their promise to buy), since he (temporarily) seems to have more money than brains.

Re: Zenith 'Hand Wired' vs 'Troublesome Printed Circuit Boards'...

I was servicing TVs in the late 50's when that Ad was popular. Zenith was correct! The early printed circuit boards were best at 'Failing'. Zenith was the one brand of TV that could be sold and not seen again for several years. When you did have a service call, it was usually the rectifier tube. And the next long time later, a tube in the tuner if you were 50+ miles from the station like we were..... I still have my memories of really poor engineering designs and equally poor manufacturing processes. Ah, the good old days! Not everything worked like it should have, but we all learned and here we are. Sure has been fun watching it happen.

2614. Re: NEED HELP with ILLEGAL BROADCAST XMTR

Da*m, Stuck at work and missed a good thread! After reading all the technical responses I've decided that the easiest solution for me would be to purchase enough audio processing equipment to allow me to make it sound just like a Valiant! Then if we run it into a Butternut and promise to never play a piccolo.......

Dan harlan N8ETQ Cleveland, oh.

They were 'Hand Crafted'. Dad sold Zenith back in the 60's when he ran a TV & appliance store. Best I remember, the early PC boards were prone to crack around the tube socket connections, due to the heat, I guess. They have come a long way since then...

The Frequency Control Unit on the above rig, mine, just went up in smoke. I require (1) a replacement unit from a junker, or (2) a schematic, with values of the components in the FCU. This schematic must be for a unit using a 6AH6 tube. My schematic uses a 6AC7; a big difference. Took me 30 years to find this out! Two resistors and a toroidal transformer are what lit up the shack. Any help wud be appreciated.All costs will be gladly covered.

Herb--

Herb, If you're real quick, there's a new assy (complete) on ebay. I think its under Hammarlund.

Greetings,

I've recently acquired one of these which appears to be in very good condition. Anyone out there running one? I haven't seen many around on eB** or at hamfests so I'm wondering if it was a limited production item. Seems to work very well, but I would like to talk to someone who is still using one and find out if there are any "gotcha's" or quirks I should watch out for.

Doug Moore KB9TMY (Formerly K6HWY)

Watch out for the sharks!
I'll bet you've already had a dozen guys offer to buy it
for a few bucks.... Tell them "no thanks."

You have a very valuable set used by Airborne Pathfinder troops
during WW-II. It was part of the system known as the
Rebecca-Eureka navigation set. The Pathfinders went in
first to the drop zones and set up these "Eureka" sets.
The "Rebecca" radar set in the aircraft carrying the
main body of airborne troops then sent
a pulse to interrogate the PPN-1. The PPN-1 responded with
a pulse and the "Rebecca" set in the aircraft displayed
bearing and distance on a CRT. I have the CRT,
but have never been so fortuante as to find a PPN-1.

Outstanding find! I sure wish I could afford one for
my collection. The last one I saw on Ebay was in
excellent/complete condition and sold for over $1000.

Jealous but kind regards,
Dave Stinson AB5S

From: "Doug Person"
Subject: FS: Kenwood VFO-120

External VFO Matches TS-120 and TS-130. I think this VFO will also work with the 520/530 and 820/830.

I have two. Both in good condition. One is complete with cable and book. The other has a copy of the book and you'll have to make your own cable - requires 2 5-pin standard DIN plugs - easy!

Kenwood VFO-120 with book and cable $100
Kenwood VFO-120 with copy of book, no cable $80

tnx es 73,

Doug -- W4DXV

From: "Denis Sharon"
Subject: Heath Apache/Hosstraders/Help!

The Spring Hosstraders Hamfest in Rochester, NH was last weekend and it was very nice. I found an especially clean Heath Apache with an SB-10 sideband adapter. I was very pleased. The gentleman from whom I bought it told me that he had the manuals and would be glad to send them to me. Great. That's the good news...

Unfortunately, we completed the transaction and parted company BUT FORGOT to exchange names and addresses. What a dummy my wife married!

So, if you are the person who sold the nice Apache to me or if you happen to know who that person might be, please contact me. Thank you.

Hopefully,

Denis Sharon W1AOK

From: "John"
Subject: Speaker for Hammarlund?

All do respect to Dale, it was not the S-200 which matched the HQ-145, 160,
170 and 180. The HQ-150 speaker was the last of the "old style", as was the
radio. Why the out of sequence numbering I don't have a clue. It was all
metal, dark grey or black and just like the speakers for the HQ-129X, 120,
140. The one main difference is that it has a red Hammarlund logo near the
top.

Subject: Speaker for Hammarlund?

Thanks for the inputs. I see also that Hammarlund refers to the speaker for the HQ-150 as the "8 inch PM speaker". I will keep my eye open for one of those. This is my first 'boatanchor', unless I count the Hallis I had as a kid.

Subject: Where to get Lafyette HE-30 repaired?

I've had a old Lafayette HE-30 sitting on the bench for a while now. Thought that I would have the time to get it back in operating condition but probably not. My job just demands to much. Wonder if any of you can recommend a good place to send an old all-tube early sixties radio for servicing? I'm more interested in a high quality job than an inexpensive job. This was my novice receiver in 1962.

Thanks,

Doug -- W4DXV

2629. Want: Old "K3PVL Print" QSL Cards (1960's)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-25 00:00:00 UTC
From: Jack <friday2k@pacbell.net>
Message-ID: <%0cX4.270$yf2.114006@news.pacbell.net>
Source record: 66176

Hi,
Just wondered if anyone has in their possession any QSL cards printed by K3PVL? These cards would be fairly plain in design and would have been printed in the early to mid 1960's. I believe the words "K3PVL Print" was at the bottom center of the QSL card. The reason I'd like to get a couple of them is that my dad was K3PVL and he had a small QSL card printing business at home in Pennsylvania when I was a kid and thought it would be nice to have some as a souvenir of his work and to be able show him again now that he is in his 80's.
Thanks,
Jack

Subject: FS: Shack Cleaning List (revised)

Shack Spring Cleaning List 5/24/00

All items are as is. Items will be listed as working or not. Most items I can supply digital photos of (or can take). Prefer payment to be US Postal, Bank or International Money Orders, checks are ok, but will hold up shipping until they clear the bank. Shipping is additional. Digital pictures can be supplied for most items. On with the list.......

National SW-3 using the 32 and 33 tubes....this rig is clean and works well. It does have a few items to note....a "bird brain" put a heaphone jack in the lower right corner of the rig (removed now). I carefully filled it and texture painted the patch job, which matches the original black texture paint very well....The repair job is virtually not visible as pictures show. One of the coil sockets was cracked...just a bit and was repaired. An original National coil set for 80 meters is included with the rig. Also, I believe I have 4 empty coil forms, maybe 6..... made by a fellow in IN...that will go with the set for your winding pleasure. These are very nice quality coil forms. This is really a neat radio. The best regen out there....(my opinion) Unfortunately the doghouse power supply does not come with the set. I used it with a little hombrew power supply that I wish to keep. Selling Price for the above $400 Prefer pickup, but will ship. OFFERS??

Military Spy Radio...GRC-109.....I have the 3 pieces, Transmitter T-784, Reciever R-1004 and Power Supply PS-2685. This rig works quite well. The reciever was aligned and is quite accurate. A manual comes with the unit. Selling price $300 Unit is heavy, but shippable.

AEA CP1....RTTY demodulator terminal unit. Not sure if it works, it was used with a C-64 on RTTY. It is clean and unfortunately I dont have the manual for it. Price: $25

Drake C-Line... R4-C, T4XC, MS-4 and AC-4 all interconnecting cables and manuals. no mic....160-10mtrs... Sherwood mods are in the R4-C, all xtal filters too. This is a great station, used it to work through RS-12 all the time....nice for split band operation...but I cant keep all these rigs.....hi Price: $545 I will throw in a new set of finals too. Prefer pickup, but will ship...heavy

SBE-34....This is a compact travel transciever, solid state, except for the driver and finals. It works, but could use an alignment. The service manual an operating manual come with the rig....The original SBE mic does too...this rig also has a Collins 2.1khz filter in it as originally supplied. The radio is clean and in good condition...it does not appear to have been in a smoking enviroment....I dont smoke...so none of these rigs have been exposed while they have been staying here in the shack :-) This rig is also capable of 12 VDC operation, though I have not tested that feature. Price: $175

Morrow Twins with Homebrew Supply......The MB-560A and the MBR-5. The two rigs are joined together (by their feet), but can easily be separated. They work well and the supply easily powers them....it is a beast....hi A manual copy comes with the setup. I prefer pick up on this item, unless the Power supply is not wanted. Power supply is not shippable. Price either way is $325

Heath HG-10 VFO....Good condition, but could use a bit of tlc. I have never used this. It was purchased as a spare that was never needed....Price: $50

Harvey Wells "Z Match" ....this has a stock wattmeter/swr meter in it....nice condition. No manual. A rare unit. All original. Price: $165 (Holding)

Yaesu FRG-7 Shortwave Reciever....This unit has many of the "Gilfer" mods. Works ok but, could use a fresh alignment. (Can be tricky to lock the mhz, but it does lock.) Rig is clean and has great audio and accuracy. Manual comes with unit. "D" internal battery tray is NOT in the radio. Price: $175

Hallicrafters S-38.....Rough condition, rusty on the inside, but with "tlc" could be brought back, not working, but original right down to all of the capacitors from what I can see. Missing bottom cover, was cardboard I believe? Price $35

Heath HD-1418 Audio Filter, brown series....works ok , but speaker output low. Good condition. Comes with original manual. Price: $40

Drake Theta RTTY Terminal unit, Mint condx stand alone unit with a B/W monitor. Original manual. $215

Universal M-900 Shortwave Decoder with B/W monitor. All in excellent condition. With manual. This is a stand alone unit....no other computer needed $300

Heath SW-717 Shortwave Receiver.....excellent condition $135

Heath HR-1680 with the HS-1661 Speaker.....very good condition, Receiver works well and looks good too! Will not separate the pair. Manual included $215

Kenwood AT-200 Antenna Tuner good condition, manual included $150

Lampkin Freq Meter good condition, no book $35

Subject: Hammarlund S meter

Anyone have an s-meter (or plastic lens lens cover) for a HQ-150? It may be the same as the one for the HQ-160. It has an orange background. I just aquired one and it has what looks like a cigarette burn mark on the plastic - works fine but the radio is so clean looking that I'd like to replace that plastic if I can.

Thanks

Subject: Help w/ drake tr-3

Hi all,
I just picked up an old drake Tr-3 transciever and having no experience with tube gear, and no manual, i was wondering if anyone could help me get it on air. It seems to work fine and it's real pretty. But I'm not real sure about transmitting. I got a mic but it dosen't have a PTT button. Which of the three 1/4" jacks on the side is for it? How do I adjust the PLATE and LOAD controls?and those unlabeled knoblets on the side? what are they? do i need a tuner/swr meter? any info you think could help me would be greatly appreciated.

Subject: Illegal Transmitter!

Pat Sed:

> I operate an old AM Broadcast transmitter on 160-meters.

Few years back, we had somewhat the same problem around here on 2M. Some guys decided that an FM signal shouldn't occupy much more BW than a CW sig. Someone figured out where the deviation pots were in their radios and they turned them down to, I think, +/- 3Kcs....It was a royal Pain in the tush to have these "enlighted" ones around, because after you cranked up the volume to hear them, someone w/the customary +/- 5 Kcs. would come on and blow your speaker cone across the room.....Of course, nobody could tell 'em any different, because *THEY* had 1X2 calls, big Swedish cars, and 300+ countries, compared to *our* HR-2B's and HW-202's...

The channel width in the AM BC band is 10 Kcs. Most of the older Xmttrs I ever had experience with started to roll-off rather drastically above 4 Kcs. Some even sounded muddier than an ATT "long lines" circuit...

Splatter, and all the other byproducts of over-modulation, are a different story, though......

Re: Zenith 'Hand Wired' vs 'Troublesome Printed Circuit Boards'...

I was servicing TVs in the late 50's when that Ad was popular. Zenith was correct! The early printed circuit boards were best at 'Failing'. Zenith was the one brand of TV that could be sold and not seen again for several years. When you did have a service call, it was usually the rectifier tube. And the next long time later, a tube in the tuner if you were 50+ miles from the station like we were..... I still have my memories of really poor engineering designs and equally poor manufacturing processes. Ah, the good old days! Not everything worked like it should have, but we all learned and here we are. Sure has been fun watching it happen.

Subject: NC-183D/NC-300 Comparison

the 300 is a better overall receiver as far as all aspects. But is that not true of all Ham band only Vs. General coverage receivers? The answer from most will be yes. The virtues of both receivers must be decided on by what you intend to do with it. The regular 183 by the way is better than the 183d as the latter suffered from its dual conversion if shifting around a lot even after alignment as they have aged. Hence much worse sensitivity on the higher bands. All of them are in my opinion (remember I said My opinion) are very good ol boatanchors in the literal sense...p

From: "Lamb"
Subject: NC-183D/NC-300 Comparison

Many years ago my friend had an NC 183D which he was very proud of. One day
the local radio dealer talked him into bringing home a Drake 2B. The 2B ran
circles around the NC 183D. It was more sensitive, more stable, more
selective and the frequency calibration was more accurate.

We checked the alignment and found it was within specifications. He sold
his NC 183D and bought a Drake 2B.

The NC 183D is dual conversion so has less image problems than the 183.
But, it is also noisier internally.

Neither receiver will receive as well as almost any modern receiver. Both
look like they are out of the 50's and are nice to look at and heavy. It
that is what you want, buy either or both.

It's a lot simpler just to pull one of the modulators.
Half the number of tubes in the modulator....
half the number of sidebands...half the bandwidth!

And as a side benefit..... look at how much you'd save
by not lighting that other filament!

From: "David L. Stinson"
Subject: NEED HELP with ILLEGAL BROADCAST XMTR

Hello, Pat.
All the smart-alecs aside, your transmitter is not
"illegal." I've been a ham for near 30 years and
here's one thing I've learned- If a fellow ham
starts telling you that this or that is "legal"
or "illegal," you better check for yourself
because 9 times out of 10 he's as full of it as a goose. ;-)

But this ain't one of them times (Of course not!
I'm talking this time! (heh heh!).
There is no fixed standard for bandwidth of
an AM transmission, barring spurious emissions
like key clicks, parasitics or unintended mixing products
like "splatter." And remember- a lot of guys yell
"splatter" when the real problem is that they
have their noise blanker engaged....duhhhh!

There is nothing illegal about your AM transmitter,
assuming it's run according to manufacturer's specs.
The engineers who designed it had to follow certain
standards and those standards will do fine on the
ham bands. It would be better if you used a
graphic equilizer in the audio line to the transmitter
so you can cut down on bandwidth. I'd suggest cutting
everything under 100 cycles and above 4000 cycles
as a starting point. No one is going to come clap
you in irons and if someone on the bands tells you
that, he's wrong.
Kind Regards,
Dave AB5S

Oh, the humanity, how far technical knowledge has sunk.

In the 60's every ham knew you needed a sharp crystal filter to cut those
pesky sidebands.

I suggest you get two large crystals of potassium cyanide (available at
bigger pest-control stores). Rub them with sandpaper until they're 1.60mm
(160 meters divided by the number of thousanths of an inch per inch) thick.

Now warm up your transmitter real well (turn all the knobs all the waaaay to
the right), and drop the crystals onto the hot output tubes (if the crystals
slide off,
the tubes aren't hot enough yet). You want the crystals to melt and
siizzle.
Now you wont have any problems with the FCC....

Pat,

Actually what the guy probably meant when he said broadcast transmitters
were illegal on the ham bands was there "size". The legal size is a 19
inch rack width and most broadcast transmitters are much bigger than
that! If you could dismantle it and put it into smaller cabinets, I am
sure it would be ok then. Of course you still need to come up with a way
to suppress the negative splatter though.

That's why you put "compression" in the audio chain, Gary.
If you put enough compression in the line, you can just
fit it in the 19 inch rack if you push hard.

So.... let's say you're running a BTA-5F on 160 meters....
All the cabinets together are... ohhh.....about 15-20 feet wide.

How many db of compression do you run....
or should it be expressed in pounds per square inch?

My guess is db. Maybe fitting into the 19 inch rack is what
they mean by gain "reduction".

And if you're gonna run it on 80 meters, do you need more or less?

(Damn, I haven't had this much fun with a thread in a long time!)

Here is a suggestion.... take it for what it's worth.... What about
using FGS for those interesting eBay auctions and other comments?

FGS stands for "FOR GOODNESS SAKES"

It goes along with FS and FA subject headers.

Lets those that want to read that sort of stuff (I do) and allows others
to pass on it.

Sound like a good idea?

Try Digi-Key Part #TTS-5-ND.

It is normally used for transferring PC artwork directly to a board, but can
also
be used for panel labels.

From: "Tom"
Subject: Suitable replacement for Ranger insulated VFO coupling

Thanks Leith,

I was kind of right in step with you on the pc board material. I'm in the process of procuring some "filler" layers of glass epoxy pcb material which is .007" thick. This should be just right to allow some flexibility. I think I have the answer to maintaining concentricity of the 2 shaft

couplings. First drill a hole in the material the same diameter as the shaft coupling. Then use the drill as a shaft, by running it through 1 coupling then through the material, then through the other coupling. tighten the screws, and mark the holes on the material. Haven't tried it yet, but sounds good in theory.

Subject: SX-88 now over $5000 on E-Pay

So the description claimed.

The pictures, however, told another story.

Pitting, scratches, and missing detail on at least three of the large
knobs. A very amateurish repaint on part of the case. Minor fading of
some of the lettering.

It still looked very good, but it certainly was not "Fully Restored" and
that price is more in line with what you would expect for an original
radio--unrestored perfect condition.

The buyer is going to get what he deserves (assuming he actually follows
through with the deal--fully one-third of all winning bidders on eBay
lots that close at over $500.00 never fulfill their promise to buy),
since he (temporarily) seems to have more money than brains.

No I don't but this will probably do just fine.

Set your preselector to the center of the band you are working. Start
at the ten meter band first. Then go to the 80 then 40 etc.

Dial up the center of the band you are aligning.

Turn on the xtal calibrator and adjust all your mixer, driver,
amplifier pots for maximum signal on s-meter. You will have either 1
or 2 adjustable caps for the transmitter section. After you get the rx
up to snuff, and without moving the preselector, adjust them for
maximum RF output. Remembering to keep the drive low, or you will
overtax the poor final and power supply.

Hope that helps.

As for the oscillators a frequency counter would be nice. Otherwise
use a external rig to check it with.

For the U/Lsb adjustments...The same. Use a known good rig and adjust
for same quality on U/L positions.

Sorry, Duncan, but my estimate was for the radio and maybe the matching
audio filter. Add another $75 for the matching supply and mike.

Steve,

The Sonar Model G is in Sams Photofacts volume CB-6. I have it at home.
I can make you a copy of it if you like. I wouldn't want to see you hack
the set up to put it on FM, but it would be great on 10m a-m. Those old
Sonar CB's always sounded great with their push-pull plate modulation,
especially when a good mic was used!

If you wanna get on 10m FM, I have a nice Comtronix FM-80 10m FM rig for
sale or trade! :)

From: Ham
Subject: What a Bargain !

If you analyze the situation, perhaps the price for this SX-88 ***IS A BARGAIN!!!!***

Well, let's see, in 1954 or 55 when the receiver was made a new car would be $2,000 maybe. Now a much better, more durable and long lasting vehicle is maybe 10 times that.

Where I live my house was a new tract house in 1955 and cost $15,000. One of the identical houses with a very minor addition to it for extra space sold for $1,100,000 a month ago after being on the market for 3 days with multiple offers over the asking price. That's a price increase of over 70 times? Make it a 60X increase for an identical house since this one had a very minor addition to it.

Without looking up actual cost of living increases over that period of time, let's use 10X as a rule of thumb and be conservative to base our prices on.

This receiver is for all practical purposes "new" and maybe even better than new with some modern replacements for some components with limited life as a result of our nearly 50 years of hindsight. Don't kid yourself, the Hallicrafters that were NEW during that era were nicely built but a bit of thick paint on the back panel wasn't unusual! Hey they couldn't even decide on proper knobs or color paint on many of their receivers and transmitters!

So, 1/10 th of $6800 is $680. This is equivalent to buying the receiver in 1955 for $680 then.

** Is that unreasonable? What did it sell for new? My 1955 handbook says $595 -- not that far from my ballpark equivalent of $680.

I'm sure that only a few were willing to pay that much for the receiver in 1955. My NC-125 which was a very expensive Christmas gift in 1952 when I was an SWL was ($109 with speaker -- dealer's price not retail) and my parents and I considered it a very expensive gift.

So, given the scarcity (not many made and few for sale just like houses around here) I think that though the price is astronomical, it may be more reasonable than we all want to admit. Items that are considered desirable and scarce these days demand a high price. We are exposed to these high prices due to the connectivity that the Internet provides with the worldwide market and the possibility of finding that "one person" with both the strong desire for that item and the money to pay for it. Something that was very very difficult to do in the "olden days."

If one were to use the same type of extrapolation, a Collins KWS-1 would cost $15,000 or more I'd suspect. Maybe rather than gripe about Hallicrafters prices, we should be buying up "mint" KWS-1s for the going price of $2,500 or so but here again there are more of them around than there are SX-88s!

I'm afraid as much as we'd like it be so, we "ain't in Podunk anymore!" we are now citizens of a vast world and the market is worldwide!

A million bucks for a "tract" house??? Where do you live? You can get a
nice
brownstone in Manhattan for less than that!

Seriously, this sort of then-and-now inflation/value analysis is deeply
flawed in
its very concept. Even the most gifted economists get into deep trouble
when
trying to calculate what the contemporary selling price of goods from a
previous
era might be. All those subordinate comments in TV documentaries to the
effect,
for example, "in 1825 the first steam-driven industrial potato mashers
cost
$185.33, and that would cost blah-blah million today. . ." are nonsense,
and only
serve to awe those who, by no fault of theirs, don't know any better.

The people
who study this sort of stuff all day can't even come up with a
consistent model
of inflation that would allow them to agree on the current value of a
1930/1875/1825 dollar, ad infinitum. Once you reach back more than about
25
years, economic models become completely unreliable, the reasons are
obvious, so
there really isn't any point in talking about "value" in this way.
Money, in a
qualitative sense is what has been most subject to inflation up to
about 1900.
Before then, increasing geometrically as you go back, money was far less
important or central to life, and was used much less often than now,
certainly
not on a daily basis.

Add to the mix that we are discussing the value of a thing that is
neither a true
antique (as Marconi's 1896 demo gear would be if it still existed), nor
is is
still in production, and the problem is compounded. Also, several
generations of
radio receivers have developed since 1955, when the SX-88 was
introduced. So,
from both an engineering and a marketing standpoint, the rig is hard to
evaluate,
because there isn't anything on the market today that is directly
comparable to
it. The only terms that make any sense when coming to a consensus about
the
dollar value of an SX-88, or most any other ham or shortwave radio of
the era
1930-1975, is its aesthetic appeal, and its place in electronic history.
The list
or street price of the SX-88 (or any other model) when new is really not
at all
relevant, since you can't make a direct, close comparison to a rig in
current
production. Performance isn't a primary consideration of absolute value
either,
since there are many receivers since 1955 that substantially exceed the
SX-88 in
all measureable specs. What we are left with is how attractive the model
is, its
relative importance as a piece of technological history, and to an
extent the
individual set's condition. Of course, if you were a 17-year-old new ham
in 1955,
you may have a certain nostalgia for this rig. There is not one thing

wrong with
that, and who can argue that nostalgia and emotion don't play a large role in
what we buy, and how much we pay for it. In a way that I can neither define nor
justify, I think these subjective measures are entirely appropriate and sensible.
The only problem is that my nostalgia is apt to be quite different from yours,
since I was 17 in 1979. Accordingly, I tend to be dewy-eyed about Drake C-lines
and TR-7s. Is a C-line worth $6800.00? Not yet, though one day it may be! But if
that day comes, and that price is paid, it won't be because of any cold calculus
of adjusted-year-dollars, or comparisons of new prices and that year's state-of-the-art.

I am hopeful that keeping and operating grand old radios will remain within the
reach of the majority of us who have an income of less than a hundred grand a
year. The worldwide market has a very short attention span, and is fickle. That
is in part at least balance to the finite supply of BAs. It is that finite supply
that alters and corrupts irrevocably the mantra the astronomical eBay prices are
OK because that is just supply-n-demand, that is just the free market, that is
just capitalism. Where things that have not been manufactured for over 30 years
are concerned, this marketplace bears closer resemblance to the market for
religious relics in medieval times than to modern capitalism. Do we all know how
honorable, admirable, and just that was?

So, given the scarcity (not many made and few for sale just like houses around here) I think that though the price is astronomical, it may be more reasonable than we all want to admit. Items that are considered desirable and scarce these days demand a high price. We are exposed to these high prices due to the connectivity that the Internet provides with the worldwide market and the possibility of finding that "one person" with both the strong desire for that item and the money to pay for it. Something that was very very difficult to do in the "olden days."

If one were to use the same type of extrapolation, a Collins KWS-1 would cost $15,000 or more I'd suspect. Maybe rather than gripe about Hallicrafters prices, we should be buying up "mint" KWS-1s for the going price of $2,500 or so but here again there are more of them around than there are SX-88s!

I'm afraid as much as we'd like it be so, we "ain't in Podunk anymore!" we are now citizens of a vast world and the market is worldwide!

Guys,

Another way to look at this auction was that there were 4 other people willing to pay $4,000+ and three others that went over $2,500 for this item. I know that at every hamfest I visit for the next year, I will be looking under the tables for that elusive trophy boatanchor, to clean up, and sell on Ebay, to help defray the costs of my kid's college education!

Great Thread!

For Sale or Trade- Collins S Line station consisting of 75S1 receiver with Waters Rejection Tuning and 500 Cycle CW filter and 4 Tubesters, 32S1 Transmitter, 516F2 Power Supply in Cabinet with speaker, Turner ceramic desk mic. All are in very good condition. Front panels are near perfect, cabinets are very straight and have been repainted. Units operate very well. I want to sell the station as a unit, but if enough people respond wanting individual units, I would consider splitting up. I am moving to a QTH that has a much smaller station area and don't have room to set these up. $1250.00 plus shipping from North Texas for the station or will consider trade for HF Transceiver or ?? e-mail direct to n5nbk@nortexinfo.net Thanks- Dan

I just finished a transaction with Jack last week, where I bought a
piece of equipment. He answered all e-mail promptly, and did a fine job
of packing and shipping the gear, as I noted in my "GOOD GUY ALERT"
posting. I note the transaction's turned around the other way in your
case, though.

> Please e-mail any comments you may have on him privately, off

Hey Pat,

You're to be commended for wanting a clean signal. The suggestion to pull half the modulator tubes was a good one for warm climates, but up there in Green Bay I'm guessing you want all the heat you can get in the winters. Therefore, my suggestion is a high level bistable multivibrator made from two 304THs and driven directly from the RF output connector. This will divide your sidebands by two, resulting in halving your bandwidth. It will also give you that Big Testosterone Sound. Since this is a bistable circuit you'll want to drive the plates with alternate half-cycles of your HV secondary for the best neutralization and purity.

73,
Mike, KK6GM
(who takes Pat at his word, and hopes he will take me at mine...)

==========
Folks there are collectors out there who know what they are doing. One bidder I know of has bought thousands of dollars of Hallicrafters gear, manuals etc. They will pay a premium for near new radios and very rare items. I suspect in a few years they will sell it for a lot more. Or open a museum -- who knows.

Some fodder for the Auction Bashers.
The first Texaco Airplane Model sold for 19.95 (5 or 6 years ago -- now $192.
Sun Records Elvis Presley Singles Set -- $51
20+ Assorted New In The Box Barbie Dolls -- $525.00
57 Chevy Convert -- $35,000
Lieca IIIB Camera $342
Johnson Invader -- $4200
Hammarlund HQ-180 Shortwave Ham Receiver -- $1775.00
ATWATER KENT #735 CATHEDRAL -- $665.00
Atwater Kent Variable Condenser 1923 --- $617.78
Nikon S2 with 5cm, 1.4 Nikkor S-C with case. -- $1,030.00
Schwinn Black Phantom Bicycle Classic Bike -- $1125 and its a 1995 reproduction
Schwinn whizzer bicycle -- $2176.00
40's or 50's Zippo Gift Package lighter mint! -- $465.00
MICHAEL JORDAN UD FINAL FLOOR AUTOGRAPH 19/23 -- $3,605.00
Babe Ruth Autograph.....100%..REAL....MINT -- $475.00
All these can be verfied on E-Bay except the 57 Chevy -- my buddy bought that one!!

If you don't understand the world of collecting -- don't knock it. But I'll bet the next time you see a Hallicrafters, National et al at a garage sale for $15 -- you get educated real quick!

The auctions are a mecca for collectors -- it allows collectors, sellers, buyers to find sought after items WORLD WIDE. How long would you search for an Hallicrafters Model SX24 in your home town??

I am not a collector but Auction Bashing is "Free Market Bashing" IMHO

Message-ID: <392D8369.5E9E48F9@NOSPAMwcom.com>
Source record: 66190

I just bought a HX-20 transmitter and fixed station PS, same vintage. There is a matching HR-20 receiver and mobile supply. These are not rare, but were not BIG in the 1960's. Johnson, WRL, Hallicrafters and National were bigger sellers as well as a large amount of surplus WW2. SSB was JUST getting started and AM were still king. They will pop up regularly but infrequently on E-Bay, newsgroups, swapmeets, etc.

If you see a HR-20 receiver, don't confuse this with the HR-10 mate to the DX-60B, it will look simlar to the HX-10 and HX-20 with those all chrome knobs, give me a shout. I am working on the matching mobile supply now.

Best of luck and 73's

Dennis WB3KUM/9

I don't see the isolation voltage in the book. Looks like you are going to have to give them a call 219 356 7100 if this number is still good. 1991 cat.

Opps, here it is in another cat. RMS test voltage Pri.- 1500; Sec.7500 , this cat. is even older than the first one.....

2656. MD Hamfest - June 18th

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-26 00:00:00 UTC
From: windbrkr@netstorm.net
Message-ID: <MPG.1398494a404c11ac989681@news.netstorm.net>
Source record: 66063

The Frederick Amateur Radio Club (FARC) presents the annual
Father's Day Hamfest on Sunday, June 18, 2000
from 8:00am to 3:00pm, rain or shine.
(Access for tailgaters opens at 6:00am)

It's at the Frederick County Fairgrounds on East Patrick Street in
historic Frederick, Maryland. Easy access from I-70 and I-270,
plenty of parking.

Talk-in on the 147.060(+) MADRA repeater.

We'll have Radios, Electronics, Computers, Acres of Tailgating,
Indoor Commercial Vendors, VE Testing and more.

Good food and refreshments available.

On the web go to http://www.qsl.net/k3erm/ for more info and a map.

General admission is a $5.00 donation.
Tailgating spaces are $5.00 each + general admission
Indoor tables are $10.00 each before June 10th, $15.00 after.

One of the largest and most popular hamfests in the
Baltimore/Washington metro area. Don't miss it!

Questions? E-mail k3erm@qsl.net

Thanks & 73,
Bob K9CMR

The Town I live in will be celebrating it's sesqui-centennial in 2003. Our local funeral director (it's a small town) gave a presentation last night with a large collection of early town memorabilia, and our librarian has received grant money to work on the project.

Over coffee this AM, I said to myself, "Self, surely Joe and you aren't the only hams to have ever tickled the airwaves from this corner of the world..."

So, here's the request:

I am looking for anything ham radio related that refers to Brookston, Indiana, Prairie Township, and/or White County, Indiana. QSL cards, pictures, rememberances, anything. Don't have much hope of finding anything, since Brookston is a small rural Indiana town (but it's a good place to call home) But I thought there might be an ancient QSL card floating around somewhere.

Thanks, and 73,
John WB9OFG

Subject: $1000+ for an HQ-180!

That is a bit excessive. Now, I saw a Hallicrafters S-120 recently go for
almost $200. Now that is foolish, even for a virtually perfect radio. The
buyer got what he deserved at that price.

Subject: Boatanchors on the Air?? Just Curious to know and read the mail.

I like to read the mail and often have the rig on as i putter around.
Id like to listen in on some of these older rigs..mainly on SSB since
my little solid state outfit cant receive AM very well. DO you fellows

ever operate those old rigs. I guess what id be looking for is a net
on 75 or 40 or maybe even 20 m or some roundtable frequencies ect.
I have a hw 12 but need a pwr supply ..then ill perhaps join in. 73
Earl VE3AB..I might mention..i got interested in ham radio by
listening to AM on 75 mtrs..a group of fellows including W3CIC who had
a very nice AM sig..this was late sixties very early 70s.

Subject: FGS - Ham Radio Clock (Atomic)

FA = Fer Auction
FS = Fer Sale

so...
FGS = Fer Goodness Sakes

Look at eBay = Radio Controlled Atomic Clock + Ham Shack! Item #332494160

Local Walmart has it fer $22.96...

I guess WalMart is right... lowest prices... Always....

As for the $1,400 HQ-180... it was mint!!!! and rare!!!! You couldn't go down to, say, Walmart and buy one... Not that it would matter any....

Oh yea - bought one at Walmart (the clock not the HQ-180). It works off a signal from WWVB at 60 Khz.

Well no matter where I placed in the house, it would stop working when I fired up my PC. You can imagine why... looked at the directions - sez it says it won't work when a computer is on....

small print of course....!!

Went back and got my money back.... Kinda hard to do the ol eBay way.....

From: "D. S. Platt"
Subject: FT/FT Valiant parts

I have just disassembled a good condition Viking Valiant I transmitter. OK, OK..I needed some spare iron for my other 3. I have the following to potentially dispose of if someone is in dire need to get one fixed up and on the air.

Complete VFO assy (complete box, no vernier) (exc.)
VFO band cam
Front panel (usable, no dings or dents; markings fine, needs periphery paint)
Case (no dings or dents but requires paint job!)
Tank circuit coils. (load and tune caps not available)
Plate choke
Meter and meter can (already had a few)
VFO calibration dial and bezel (dial is fine, bezel could maybe use

paint)
Knobs (I can spare 3-4 only!)
866's (you mean you don't use 3B28's?)
Some switch wafers (except pa loading..ha..you know why!!)

I haven't thrown the chassis out yet, so if there's any small components
that may still be there, let me know and I'll see if they can be removed
with any leads left. Any needs/offers? I'm looking for a 2-3 pos coax
switch, Dow-Key coax relay, 3B28's, J-38's, M15/UR mic.

Regards.

From: Will
Subject: where can you test a tube these days

You have two main options: find a friend who has a tester, or buy a used
one. The latter need not be as expensive as you might think. Testers
that are better than most of the old retail point-of-sale units can be
had for less than $50. Check the newsgroups and ham web sites, and even

eBay has a few of them.

Subject: Anybody know K8BVJ?

Does anyone know K8BVJ (Jack Buccchieri)? We consummated a deal on some merchandise 10 days ago. I was informed that the money was on the way, and I have not received it nor heard from him since. I have sent him 4 e-mails with no replies...they have all gone unanswered. I notice he has several listings on this group...I wonder if anyone else has had any dealings with him. From my experience...I would recommend CAUTION and BEWARE. Please e-mail any comments you may have on him privately, off line.
Thanks,
Joe, W5LX

I just finished a transaction with Jack last week, where I bought a piece of equipment. He answered all e-mail promptly, and did a fine job of packing and shipping the gear, as I noted in my "GOOD GUY ALERT" posting. I note the transaction's turned around the other way in your case, though.

Subject: Crystals Needed

Now that I have my Viking II up and running, and no VFO, I need some FT243
crystals. I am looking for 3870, 3885 and 1925 kcs. Tried calling Peterson
Radio in Iowa but they must be on vacation. Anyone have some of these
frequencies surplus to their needs or know where I can buy them. I called
International and they told me that they no longer produce the FT243 style.

Subject: Hammarlund SP-600-JX-17 Ser No 14441

The Frequency Control Unit on the above rig, mine, just went up in smoke. I require (1) a replacement unit from a junker, or (2) a schematic, with values of the components in the FCU. This schematic must be for a unit using a 6AH6 tube. My schematic uses a 6AC7; a big difference. Took me 30 years to find this out! Two resistors and a toroidal transformer are what lit up the shack. Any help wud be appreciated.All costs will be gladly covered.

Subject: Heathkit HX-10 "Maurader: question

Greetings,

I've recently acquired one of these which appears to be in very good condition. Anyone out there running one? I haven't seen many around on eB** or at hamfests so I'm wondering if it was a limited production item. Seems to work very well, but I would like to talk to someone who is still using one and find out if there are any "gotcha's" or quirks I should watch out for.

From: WB3KUM/9
Subject: Heathkit HX-10 "Maurader: question

I just bought a HX-20 transmitter and fixed station PS, same vintage. There is a matching HR-20 receiver and mobile supply. These are not rare, but were not BIG in the 1960's. Johnson, WRL, Hallicrafters and National were bigger sellers as well as a large amount of surplus WW2. SSB was JUST getting started and AM were still king. They will pop up regularly but infrequently on E-Bay, newsgroups, swapmeets, etc.

If you see a HR-20 receiver, don't confuse this with the HR-10 mate to the DX-60B, it will look simlar to the HX-10 and HX-20 with those all chrome knobs, give me a shout. I am working on the matching mobile

supply now.

Best of luck and 73's

They were 'Hand Crafted'. Dad sold Zenith back in the 60's when he ran a TV & appliance store. Best I remember, the early PC boards were prone to crack around the tube socket connections, due to the heat, I guess. They have come a long way since then...

Hey Pat,

You're to be commended for wanting a clean signal. The suggestion to pull half the modulator tubes was a good one for warm climates, but up there in Green Bay I'm guessing you want all the heat you can get in the winters. Therefore, my suggestion is a high level bistable multivibrator made from two 304THs and driven directly from the RF output connector. This will divide your sidebands by two, resulting in halving your bandwidth. It will also give you that Big Testosterone Sound. Since this is a bistable circuit you'll want to drive the plates with alternate half-cycles of your HV secondary for the best neutralization and purity.

73,
Mike, KK6GM

Mike,

Your theory is flawed. Because you are cutting the bandwidth in half, the heat from the finals will also be cut in half, which as you pointed out may not be desirable. Your idea sounds good on the surface but I am not sure it will accomplish all that is intended. Of course the multivibrator will increase the efficiency (reason for the drop in heat) but this will only work properly if the ac power phase is connected properly.

Subject: Raytheon RL-10 Program Limiter

Hello All,

Was wondering if anybody has any information
on this rig. I recapped it and got it running. Looks
like the thing can crank in about 30 db of limiting
and is balanced in and out. Vintage lineup, P/P 6J7'S
P/P 6SJ7'S to P/P 6F6'S. A 6H6 sends control voltage.
Adjustable "Recovery Time" of 1 to 5 msec. A multi-meter
switched to read the KATH. "voltage" of all 6 active tubes
and a position for "limiting" in DB. Rack mount with
a medium dark brown 19"X14" panel with a removable insert
panel that lets ya get at the tubes. It's so UGLY I have
to put it on-line!! Any info greatly appreciated.

Subject: Want: Old "K3PVL Print" QSL Cards (1960's)

Hi,
Just wondered if anyone has in their possession any QSL cards printed by
K3PVL? These cards would be fairly plain in design and would have been
printed in the early to mid 1960's. I believe the words "K3PVL Print" was
at the bottom center of the QSL card. The reason I'd like to get a couple
of them is that my dad was K3PVL and he had a small QSL card printing
business at home in Pennsylvania when I was a kid and thought it would be
nice to have some as a souvenir of his work and to be able show him again
now that he is in his 80's.
Thanks,
Jack

Subject: What a Bargain ! SX-88

Guys,

Another way to look at this auction was that there were 4 other people willing to pay $4,000+ and three others that went over $2,500 for this item. I know that at every hamfest I visit for the next year, I will be looking under the tables for that elusive trophy boatanchor, to clean up, and sell on Ebay, to help defray the costs of my kid's college education!

Great Thread!

73,
Eric

==========
Folks there are collectors out there who know what they are doing. One bidder I know of has bought thousands of dollars of Hallicrafters gear, manuals etc. They will pay a premium for near new radios and very rare items. I suspect in a few years they will sell it for a lot more. Or open a museum -- who knows.

Some fodder for the Auction Bashers.
The first Texaco Airplane Model sold for 19.95 (5 or 6 years ago -- now $192.
Sun Records Elvis Presley Singles Set -- $51
20+ Assorted New In The Box Barbie Dolls -- $525.00
57 Chevy Convert -- $35,000
Lieca IIIB Camera $342
Johnson Invader -- $4200
Hammarlund HQ-180 Shortwave Ham Receiver -- $1775.00
ATWATER KENT #735 CATHEDRAL -- $665.00
Atwater Kent Variable Condenser 1923 --- $617.78

Nikon S2 with 5cm, 1.4 Nikkor S-C with case. -- $1,030.00
Schwinn Black Phantom Bicycle Classic Bike -- $1125 and its a 1995
reproduction
Schwinn whizzer bicycle -- $2176.00
40's or 50's Zippo Gift Package lighter mint! -- $465.00
MICHAEL JORDAN UD FINAL FLOOR AUTOGRAPH 19/23 -- $3,605.00
Babe Ruth Autograph.....100%..REAL....MINT -- $475.00
All these can be verfied on E-Bay except the 57 Chevy -- my buddy bought
that one!!

If you don't understand the world of collecting -- don't knock it. But I'll
bet the next time you see a Hallicrafters, National et al at a garage sale
for $15 -- you get educated real quick!

The auctions are a mecca for collectors -- it allows collectors, sellers,
buyers to find sought after items WORLD WIDE. How long would you search for
an Hallicrafters Model SX24 in your home town??

I am not a collector but Auction Bashing is "Free Market Bashing" IMHO

From: Badkitty <castleridge1@icqmail.com>
Message-ID: <2aatiskeemudql364hc7rvrh8pnnvj1fte@4ax.com>
Source record: 66072

Recently acquired this old receiver and would like to find a schematic
before I "dig in".

It's a Radiomarine Corporation Of America model AR-6506-B Mfd. in
Aug. of 1944. 5 bands. Seen here:
http://members.xoom.com/dc265/radio/May/P0000465sc.JPG
http://members.xoom.com/dc265/radio/May/P0000466sc.JPG
Looking at the date and the lack of any military markings, I'm
guessing this was made for the Merchant Marine Service. I've never
seen shielding like this before. (3 layers)

Where could I find some documentation on this barge?

Message-ID: <392ED1B6.EBCF6703@07snowhill.com>
Source record: 66075

I have a mil surplus modulator unit from APS-104 search radar (likely from B-52 bomber - 1960s vintage). Was used to fire a large pulse magnetron (in another unit). Contains a 4C35 thyratron, four 3B29 HV rectifiers and a few smaller tubes, oil caps, relays, transformers and other parts all in airtight aluminum canister. Also have copy of service manual (extra $5 for all, n/c for just the basic schematic & info). Still in original box, but used, collector's item, $55 (prefer pick up - box exceeds UPS size limit).(For an additional $20, I can shave down the foam insert and modify the box for UPS shipping, just takes a lot of time & effort to do this, and will cost at least another $40 to $60 to ship 105 lbs.) Located in southeast Alabama, 36330 zip. NOTE: Please REMOVE the "07" to reply or call 334-347-5281 day/eve.

Bean town is all pooped out of good BA places, or any BA places as far as I know. Years ago there used to be places like Meshna and Young Engineering that were pretty good.

Your best bet is to take a drive out of town.

There is a Ham Radio Outlet in Salem, NH, which is about 40 minutes up RT93. Its mostly all the new stuff but they do have a small consignment shelf.

But for a real treat venture a couple hours north to Pi-exx in Hillsboro, NH.
Chris Sieg has an electronics business there with a large inventory of boatanchor radio gear. (If you ask nice he might let you wander around the back). It's not too often you can walk down a main street in a little town and see a store front window with Collins and Heath radios in it! Recommend you call him at 603-464-5411 before attempting a visit.

Have fun in Bah-ston!

Source record: 66081

Hi guys,

Today i came across a bunch of original Howard W. Sams & Co. "Photofact" -- 7 filing cabinets from set no. 1 - 1900+ or there abouts. I loaded up sets no. 1-585 which is all i could carry. I could piece meal them out on ebay I suppose or try to sell the lot. Is there any one intrested in them? Or give me some suggestions on unloading them.
They seem very complete with Cumulative index from sets No.1 starting from 6-1946.. Besides the radio service data folders sets 1-1900+ there are dozens of Photofact books and plenty of notebooks full of service data.
Thanks, Steve N6TT@jps.net

2675. Re: NC-183D/NC-300 Comparison

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-26 00:00:00 UTC
From: NANCY GIANAKOPOULOS <n.gianakopoulos@worldnet.att.net>

Source record: 66082

Actually, in terms of sensitivity, the Drake 2B will receive as well as most of today's receivers. It may not be as good, in terms of ultimate channel selectivity, stability, etc. The National NC300 was also a very good receiver; it boasted a NF of right around 8dB. The problem is that many of the boatanchors need to be revamped; you know the story, things such as cathode bypass caps, biasing resistors which have changes value over the years, changing the Q point of the tubes.
On a final note, I would say that if you find one of these receivers in proper operating condition, they are great! I've had sever of them myself. As far as the NC183D; that receiver was nothing ever to write home about; the HRO60 was a much better unit. Now if I could have gotten an NC400.....

Don't be too sure on that....This week I read, on the ARRL web site, that they're cooperating with some agency about a study of potential increased cancer rates among hams.

2685. Central Electronics 10A sideband exciter FS

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-26 00:00:00 UTC
From: Jim/Julia <w7ls@blarg.net>
Message-ID: <392F54E4.4A6CF383@blarg.net>
Source record: 66092

I have a CE model 10A sideband exciter. It is a piece of history, being the first sideband transmitter available to hams. It is the old phasing type unit. It doesn't use any crystal filters. It's been sitting in an attic for years, or decades. Appears to be all there, though. I even have the original manual for it. Condition is dirty, but could be cleaned up and got working, again. $75 plus a few for shipping. 73 de Jim, W7LS

2686. GB6VR ...

A station of interest to valve radio enthusiasts ...

GB6VR (Valve Radio) will be on Air this Sunday, 28th May, from the East
Suffolk Wireless Revival Rally
located in Ipswich Suffolk UK.

We will be operating on 80/40/20m bands with old valve radio equipment.
We hope to be using AM on 80m, so look forward to hearing all you AM
enthusiasts!

If you hear us then do please give us a call ...

73 es gud dx om.

2687. Who Sold Me an Apache?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-27 00:00:00 UTC
From: Denis Sharon <denis.sharon@worldnet.att.net>
Message-ID: <ZEFX4.6334$793.409043@bgtnsc05-news.ops.worldnet.att.net>
Source record: 66094

Help! A nice gentleman sold me a very clean Heath Apache and SB-10 at the Rochester, NH hamfest. He told me that he had the manuals for it and would be glad to send them to me. That's the good news. The bad news is that we parted company without exchanging names and addresses. Bummer!

So, if you are that person OR if you have any idea who it might be, PLEASE contact me. (Hint: the seller was leaving early to attend a wedding. Does that help?)

Thanks,

Denis Sharon W1AOK
Ridgefield, CT

2696. Drake TR-6/RV-6 station A Little over 1 DAY REMAINING ON EBAY

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-27 00:00:00 UTC
From: yardleyite@aol.com
Message-ID: <20000527001511.08269.00000267@ng-fc1.aol.com>
Source record: 66103

Collector Quality Drake TR-6 with rare matching RV-6 remote VFO, Power supply, NB-9 noise blanker installed and (not shown) Drake 7075 microphone. This station is absolutely beautiful cosmetically and electrically. Very little use since new. It has the original Sylvania tubes in it and delivers full output. Extra crystals installed in some of the slots. The factory NB-9 noise blanker works well supressing most QRM and elecrtical noise. The 7075 microphone makes good use of one’s voices harmonics and has a smooth tone. I have the original manual for the TR-6 but not the RV-6 and 7075 microphone. If you want to catch some of the terrific E-skip this season on SSB/CW or want to work AM on 50.400 here's a chance to do it with something other than a Yaecomwoods out of the box radio. I guarantee it to be working when it arrives but no other guarantee is expressed or implied. The pictures shown here are grainy and lack detail. They do not do it justice. Unfortunately, I do not have a better digital camera. Please email me if you have any questions. I’d prefer the lucky winner of this station pick it up at my home but I will pack it very carefully and ship internationally if need be. Payment to be in U.S. funds only. Reason for selling: I recently upgraded my license and prefer to concentrate my operating time on HF. If there were a Drake museum and they needed a six meter station to fill the slot and use every day; this would be the radio to do it with. Happy bidding and good luck. Please go to my URL for pictures since it's not showing up on ebay: http://hometown.aol.com/yardleyite/index.html
Please find URL on ebay:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=338268051

2699. Re: What a Bargain !

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-27 00:00:00 UTC
From: Chas <wg2a@frontiernet.net>
Message-ID: <392FA7AB.6630@frontiernet.net>
Source record: 66106

I believe that some people resent ebay, because of the effect that
these astronomical auctions seem to have on the relative value of used
ham gear. Remember, very few of us hams are rich, yet most of us would
love to have collections to one degree or another.
While you can't hold it against someone for wanting top dollar for
their gear, some of the critics of ebay are concerned about the long
term effects on prices which are rising faster than their paychecks.
On the other hand, most critics seem to dislike ebay because they
can't "make a killing" on a everything that they see and want. Ebay
seems to strip them of their ability to pursuade people to lower their
price to what the buyer wants to pay.

Subject: BOSTON BA's?

Bean town is all pooped out of good BA places, or any BA places as far as I
know. Years ago there used to be places like Meshna and Young Engineering
that were pretty good.

Your best bet is to take a drive out of town.

There is a Ham Radio Outlet in Salem, NH, which is about 40 minutes up RT93.
Its mostly all the new stuff but they do have a small consignment shelf.

But for a real treat venture a couple hours north to Pi-exx in Hillsboro,
NH.

Chris Sieg has an electronics business there with a large inventory of boatanchor radio gear. (If you ask nice he might let you wander around the back). It's not too often you can walk down a main street in a little town and see a store front window with Collins and Heath radios in it! Recommend you call him at 603-464-5411 before attempting a visit.

Have fun in Bah-ston!

John

Subject: Drake TR-6/RV-6 station A Little over 1 DAY REMAINING ON EBAY

Collector Quality Drake TR-6 with rare matching RV-6 remote VFO, Power supply, NB-9 noise blanker installed and (not shown) Drake 7075 microphone. This station is absolutely beautiful cosmetically and electrically. Very little use since new. It has the original Sylvania tubes in it and delivers full output. Extra crystals installed in some of the slots. The factory NB-9 noise blanker works well supressing most QRM and elecrtical noise. The 7075 microphone makes good use of one’s voices harmonics and has a smooth tone. I have the original manual for the TR-6 but not the RV-6 and 7075 microphone. If you want to catch some of the terrific E-skip this season on SSB/CW or want to work AM on 50.400 here's a chance to do it with something other than a Yaecomwoods out of the box radio. I guarantee it to be working when it arrives but no other guarantee is expressed or implied. The pictures shown here are grainy and lack detail. They do not do it justice. Unfortunately, I do not have a better digital camera. Please email me if you have any questions. I’d prefer the lucky winner of this station pick it up at my home but I will pack it very carefully and ship internationally if need be. Payment to be in U.S. funds only. Reason for selling: I recently upgraded my license and prefer to concentrate my operating time on HF. If there were a Drake museum and they needed a six meter station to fill the slot and use every day; this would be the radio to do it with. Happy bidding and good luck. Please go to my URL for pictures since it's not showing up on ebay: http://hometown.aol.com/yardleyite/index.html

Subject: FS/FT: Blackface Tempo One project/parts radio

For Sale / Trade:
Tempo One blackface with matching PS/speaker. This is the late model
with the solid-state balanced modulator. I bought it at Dayton and it
need help. Seems some CB'er monkey'ed around in it and screwed some
things up. I removed the CB crystals (these will not be included, they
went into the trash). The 28.5 to 29 MHz crystal is there. I corrected

some of the butchering, but don't have the time to finish it. All the parts are there, a few tubes are the wrong ones (I think) and the finals are there and look good. The radio powers up but doesn't receive or transmit. The power supply is OK. Both cabinets need a fresh coat of paint. All the knobs are there and original. Manual is for Yaesu FT-200 (Tempo One) and looks like new.

$100 shipped mainland USA or trade for ???

Thanks.... Mark W4UDX.

From: worley@07snowhill.com
Subject: FS: APS-104 radar modulator

I have a mil surplus modulator unit from APS-104 search radar (likely from B-52 bomber - 1960s vintage). Was used to fire a large pulse magnetron (in another unit). Contains a 4C35 thyratron, four 3B29 HV rectifiers and a few smaller tubes, oil caps, relays, transformers and other parts all in airtight aluminum canister. Also have copy of service manual (extra $5 for all, n/c for just the basic schematic & info). Still in original box, but used, collector's item, $55 (prefer pick up - box exceeds UPS size limit).(For an additional $20, I can shave down the foam insert and modify the box for UPS shipping, just takes a lot of time & effort to do this, and will cost at least another $40 to $60 to ship 105 lbs.) Located in southeast Alabama, 36330 zip. NOTE: Please REMOVE the "07" to reply or call 334-347-5281 day/eve.

Subject: FS:Sams Photofacts sets1-1900+

Hi guys,

Today i came across a bunch of original Howard W. Sams & Co. "Photofact" --
7 filing cabinets from set no. 1 - 1900+ or there abouts. I loaded up sets
no. 1-585 which is all i could carry. I could piece meal them out on ebay I
suppose or try to sell the lot. Is there any one intrested in them? Or give
me some suggestions on unloading them.
They seem very complete with Cumulative index from sets No.1 starting from
6-1946.. Besides the radio service data folders sets 1-1900+ there are
dozens of Photofact books and plenty of notebooks full of service data.
Thanks, Steve N6TT@jps.net

Subject: HELP! need info on marine receiver.

Recently acquired this old receiver and would like to find a schematic before I "dig in".

It's a Radiomarine Corporation Of America model AR-6506-B Mfd. in Aug. of 1944. 5 bands. Seen here:
http://members.xoom.com/dc265/radio/May/P0000465sc.JPG
http://members.xoom.com/dc265/radio/May/P0000466sc.JPG
Looking at the date and the lack of any military markings, I'm guessing this was made for the Merchant Marine Service. I've never seen shielding like this before. (3 layers)

Where could I find some documentation on this barge?

Subject: History Project.

The Town I live in will be celebrating it's sesqui-centennial in 2003. Our local funeral director (it's a small town) gave a presentation last night with a large collection of early town memorabilia, and our librarian has received grant money to work on the project.

Over coffee this AM, I said to myself, "Self, surely Joe and you aren't the only hams to have ever tickled the airwaves from this corner of the world..."

So, here's the request:

I am looking for anything ham radio related that refers to Brookston, Indiana, Prairie Township, and/or White County, Indiana. QSL cards, pictures, rememberances, anything. Don't have much hope of finding anything, since Brookston is a small rural Indiana town (but it's a good place to call home) But I thought there might be an ancient QSL card floating around somewhere.

Thanks, and 73,
John WB9OFG

Subject: MD Hamfest - June 18th

The Frederick Amateur Radio Club (FARC) presents the annual
Father's Day Hamfest on Sunday, June 18, 2000
from 8:00am to 3:00pm, rain or shine.
(Access for tailgaters opens at 6:00am)

It's at the Frederick County Fairgrounds on East Patrick Street in
historic Frederick, Maryland. Easy access from I-70 and I-270,
plenty of parking.

Talk-in on the 147.060(+) MADRA repeater.

We'll have Radios, Electronics, Computers, Acres of Tailgating,
Indoor Commercial Vendors, VE Testing and more.

Good food and refreshments available.

On the web go to http://www.qsl.net/k3erm/ for more info and a map.

General admission is a $5.00 donation.
Tailgating spaces are $5.00 each + general admission
Indoor tables are $10.00 each before June 10th, $15.00 after.

One of the largest and most popular hamfests in the
Baltimore/Washington metro area. Don't miss it!

Questions? E-mail k3erm@qsl.net

Thanks & 73,
Bob K9CMR

From: "NANCY GIANAKOPOULOS"
Subject: NC-183D/NC-300 Comparison

Actually, in terms of sensitivity, the Drake 2B will receive as well as most of today's receivers. It may not be as good, in terms of ultimate channel selectivity, stability, etc. The National NC300 was also a very good receiver; it boasted a NF of right around 8dB. The problem is that many of the boatanchors need to be revamped; you know the story, things such as cathode bypass caps, biasing resistors which have changes value over the years, changing the Q point of the tubes.
On a final note, I would say that if you find one of these receivers in proper operating condition, they are great! I've had sever of them myself. As far as the NC183D; that receiver was nothing ever to write home about; the HRO60 was a much better unit. Now if I could have gotten an NC400.....

OhmyGod,

I'm reading along, digesting one after another perfectly rational post
about radios, and...suddenly...I'VE FALLEN INTO THE WORLD OF PARANOID

IGNORAMUSES. Folks, do you have any conception of how stupid...er, ignorant...you sound?

If I had any doubt of my pro-gun control position, it would only take one or two exhibitions such as this of the caliber of thought on the other side to firm up my conviction.

How could you improve your clarity of thought? To begin with, recognize there is NO rational connection between your gun and your frequencies: One is an object expressly designed to injure people, therefore inherently more dangerous than almost any other object available to us in daily life, and the other is NOT.

Another hint: Scientific studies regarding the danger, if any, of exposure to RF, are not at all likely to have been designed to take away your frequencies, even if funded by the government. Why? Because, first, they will be conducted by SCIENTISTS, and scientists actually tend to be interested in discovering truth, and therefore in testing the things they discover against nature How do you think you got the technology to access your frequencies in the first place? Through the activities of scientists, testing their truths over and over until they got them right. Such people will not lie lightly.
Second, even if the scientists did lie, it is extremely unlikely that they could make any sensible person believe that RF was so dangerous as to justify preventing anyone from experimenting with it, who was willing to run the personal risk. Look at cigarettes. Though proven to be extremely dangerous, it has taken 30 YEARS for the tide of public opinion to turn against them, and still almost no-one suggests outlawing them. This is because we who are anti-smoking are rational enough to know what hardship that would cause to existing smokers.

In other words, for God's sake set aside the paranoia and learn to think clearly. There is still hope for you.

I don't see the isolation voltage in the book. Looks like you are going
to have to give them a call 219 356 7100 if this number is still good.
1991 cat.

Opps, here it is in another cat. RMS test voltage Pri.- 1500; Sec.7500 ,
this cat. is even older than the first one.....

Hey Guys and Gals,

This is the United States, remember? That means there are a lot of RICH
PEOPLE OUT THERE. How hard is it to spend $3500 for a toy when your income
is, say, $10,000,000 a year. (Lots of our CEOs make more.)

Or do you just like to cling to the comforting notion that everyone in the
good old USA is "middle class'?

Subject: What a Bargain !

I believe that some people resent ebay, because of the effect that
these astronomical auctions seem to have on the relative value of used
ham gear. Remember, very few of us hams are rich, yet most of us would
love to have collections to one degree or another.
While you can't hold it against someone for wanting top dollar for
their gear, some of the critics of ebay are concerned about the long
term effects on prices which are rising faster than their paychecks.
On the other hand, most critics seem to dislike ebay because they
can't "make a killing" on a everything that they see and want. Ebay
seems to strip them of their ability to pursuade people to lower their
price to what the buyer wants to pay.

Subject: Who Sold Me an Apache?

Help! A nice gentleman sold me a very clean Heath Apache and SB-10 at the Rochester, NH hamfest. He told me that he had the manuals for it and would be glad to send them to me. That's the good news. The bad news is that we parted company without exchanging names and addresses. Bummer!

So, if you are that person OR if you have any idea who it might be, PLEASE contact me. (Hint: the seller was leaving early to attend a wedding. Does that help?)

Thanks,

If they are really a complete set, can you work out a licensing
arrangement with TAB publications and keep the originals but
sell reprints of them ??

You have a gold-mine of information that is priceless to those
who restore old equipment.

Anyway just a thought worth exploring..

In 1968 when I was 16 I had the opportunity to use, and the option to purchase a SX88 from a local older ham who had purchased it new in the mid 50s but had just "upgraded" to Drake equipment, I think an early 4 line. I used the receiver along with my old DX 100 for about a month and wished I could afford the $300 he was asking for it back then. It was way ahead of my SX110 in performance but $300 to spend on a ham radio receiver, even an SX88, back then was as far away from me as the $6,000+ it sold for on e-bay.

After I returned the SX88 to its owner,I used the SX110 for a few years and purchased a NC303 that IMHO was a better receiver on the ham bands than the SX88, and I only paid $125 for it.

The SX88 gained its reputation as the rock solid receiver that went on the first Clipperton DXpedition. The group that went to Clipperton sang its praises in many Hallicrafters ads during the mid 50s. I did not realize that there were so few of them made (anyone have a total?). If I had purchased the receiver in 68 I probably would have sold it at a hamfest in the early 70s for much less than I paid for it when I decided that I really needed something like the TS 520 or the Yaesu 101 more than a couple of boatanchor Heath and National units. Today I wish I had the 88 and the 303 and maybe the DX100 back.

That the SX88 went for as much as it did tells me that there is a lot of money out there chasing a dwindling number of collectable goods. This happened in the US rare coin market in the late 70s and the collector car market recently. Usually these things run in cycles and follow the fortunes of the economy.

BTW,

The SX88 went for $595 in 1955. According to the Consumer Price Index ((http://stats.bls.gov/cpihome.htm)this would be $3800 today and it It went for almost 100% more than that. As one writer pointed out it did not beat a 6% bond return, but was it possible to get a 6% bond in 1955?

Tom:

I have a TU-8B and also may still have the VLF model -- think this one is a TU-26B. Also have a couple of cases and front panels -- will have to check which --B unit they are from.

My first rig was a 40-meter CW trans that was built in a TU-7B -- with a 6L6 driving an 807. It was a great little set and I wish I still had it.

I'll go to my storage unit this after to check what I have. Let me know your needs. You are right on --XB . . . where X denoted the (approximate) frequency of the unit. I can make you a package deal on everything I have -- since I may be moving out of state in the near future and really don't want to pack and haul these units again.

Kenwood TS-600 all mode six meter base station. Operates in SSB/CW/AM/FM with power output adjustable from about 500mw to 12 watts. 110V AC or 12V DC. This radio does not have an offset for repeaters or a PL board. Very good cosmetically and excellent electrically. It has a small chip off the front bezel under the S-Meter that is difficult to notice. I've owned this radio for 15 years and am selling it due to me upgrading my license. I prefer to concentrate my efforts on HF. If my picture doesn't show up please go to : http://hometown.aol.com/yardleyite/page1.html Happy bidding and 73!

Source record: 66123

I owned one for several years. It is an outstanding rig. Quite stable on ssb compared to the Apache with the adapter. The Maurader was a filter type ssb rig as opposed to the ssb adapter for the Apache which was phasing method. The potted power transformer was the weakness of the Maurader. Peter Dhal made a bunch of bucks selling replacement transformers. If you are fortunate to pick up a Maurader with one of his transformers in it, you will have on FB rig.

Gang --

Whilst at Dayton this year, one fellow had an HT-44 and SX-117 that were new in the box, apparently never opened. He told me that the current "bid" was $2,200 !! That was Saturday morning at about 10:00 AM. Anyone know if he sold them, and for what price?

(No, I'm not interested, just curious...)

No. So far you're the only one to make that rather unsupportable
conclusion.

Did you read this thread? From the start? I doubt it. Let me copy in one
of my earlier comments:

>> >> I'm not quite sure if there is a correlation between gun control and
>> >> taking away our frequencies, aside from the general issue of
government
>> >> control.

I thnk Dan Fox's reply was tounge in cheek, so why don't you chill out
Lenny?

>
>If I had any doubt of my pro-gun control position

I'm anti-gun control and proud of it. If you don't like it, that's just
too bad. Deal with it. I don't back down from my positions just because
someone doesn't like it.

>
>Another hint: Scientific studies regarding the danger, if any, of exposure
>to RF, are not at all likely to have been designed to take away your
>frequencies, even if funded by the government....

[snip]

Lenny, chill out...take a deep breath and some valium...learn to recognize
humor when you see it. Me thinks YOUR the one so paranoid about us anti-gun
folks....If you don't want to own a gun that fine by me.

2728. Drifty BC-221?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-27 00:00:00 UTC
From: Jack Taylor <n7oo@theriver.com>
Message-ID: <XNWX4.134613$VR.2352111@news5.giganews.com>
Source record: 66135

Brought home a 'new BC-221AE'. Nice and clean inside and all tubes check good. At first it didn't want to operate but a dose of contact cleaner on the front panel switches brought it back to life. It's been many years since I last use one but it seemed to me these are pretty stable units after a 30 minute warmup.

This unit however, exibits a slow drift even after hours of operation. It additionally warbles with an ever so slight jostling to the table upon which it sits. If this is NOT a common occurance, anyone have pointers to a cure?

Shack Spring Cleaning List 5/27/00

All items are as is. Items will be listed as working or not. Most items I can supply digital photos of (or can take). Prefer payment to be US Postal, Bank or International Money Orders, checks are ok, but will hold up shipping until they clear the bank. Shipping is additional. Digital pictures can be supplied for most items. On with the list.......

National SW-3 using the 32 and 33 tubes....this rig is clean and works well. It does have a few items to note....a "bird brain" put a heaphone jack in the lower right corner of the rig (removed now). I carefully filled it and texture painted the patch job, which matches the original black texture paint very well....The repair job is virtually not visible as pictures show. One of the coil sockets was cracked...just a bit and was repaired. An original National coil set for 80 meters is included with the rig. Also, I believe I have 4 empty coil forms, maybe 6..... made by a fellow in IN...that will go with the set for your winding pleasure. These are very nice quality coil forms. This is really a neat radio. The best regen out there....(my opinion) Unfortunately the doghouse power supply does not come with the set. I used it with a little hombrew power supply that I wish to keep. Selling Price for the above $350 Prefer pickup, but will ship. OFFERS??

Military Spy Radio...GRC-109.....I have the 3 pieces, Transmitter T-784, Reciever R-1004 and Power Supply PS-2685. This rig works quite well. The reciever was aligned and is quite accurate. A manual comes with the unit. Selling price $280 Set is heavy, but shippable.

AEA CP1....RTTY demodulator terminal unit. Not sure if it works, it was used with a C-64 on RTTY. It is clean and unfortunately I dont have the manual for it. Price: $25

Drake C-Line... R4-C, T4XC, MS-4 and AC-4 all interconnecting cables and manuals. no mic....160-10mtrs... Sherwood mods are in the R4-C, all xtal filters too. This is a great station, used it to work through RS-12 all the time....nice for split band operation...but I cant keep all these rigs.....hi Price: $545 I will throw in a new set of finals too. Prefer pickup, but will ship...heavy

SBE-34....This is a compact travel transciever, solid state, except for the driver and finals. It works, but could use an alignment. The service manual an operating manual come with the rig....The original SBE mic does too...this rig also has a Collins 2.1khz filter in it as originally supplied. The radio is clean and in good condition...it does not appear to have been in a smoking enviroment....I dont smoke...so none of these rigs have been exposed while they have been staying here in the shack :-) This rig is also capable of 12 VDC operation, though I have not tested that feature. Price: $175

Morrow Twins with Homebrew Supply......The MB-560A and the MBR-5. The two rigs are joined together (by their feet), but can easily be separated. They work well and the supply easily powers them....it is 70lbs A manual copy comes with the setup. I prefer pick up on this item, unless the Power supply is not wanted. Power supply is not shippable. Price either way is $325

Heath HG-10 VFO....Good condition, but could use a bit of tlc. I have never used this. It was purchased as a spare that was never needed....Price: $50

Harvey Wells "Z Match" ....this has a stock wattmeter/swr meter in it....nice condition. No manual. A rare unit. All original. Price: $165 (Holding)

Yaesu FRG-7 Shortwave Reciever....This unit has many of the "Gilfer" mods. Works ok but, could use a fresh alignment. (Can be tricky to lock the mhz, but it does lock.) Rig is clean and has great audio and accuracy. Manual comes with unit. "D" internal battery tray is NOT in the radio. Price: $175

Hallicrafters S-38.....Rough condition, rusty on the inside, but with "tlc" could be brought back, not working, but original right down to all of the capacitors from what I can see. Missing bottom cover, was cardboard I believe? Price $35

Heath HD-1418 Audio Filter, brown series....works ok , but speaker output low. Good condition. Comes with original manual. Price: $40

Drake Theta RTTY Terminal unit, Mint condx stand alone unit with a B/W monitor. Original manual. $215

Universal M-900 Shortwave Decoder with B/W monitor. All in excellent condition. With manual. This is a stand alone unit....no other computer needed $300

Heath SW-717 Shortwave Receiver.....excellent condition $135

Heath HR-1680 with the HS-1661 Speaker.....very good condition, Receiver works well and looks good too! Will not separate the pair. Manual included $215

Kenwood AT-200 Antenna Tuner good condition, manual included $150

Lampkin Freq Meter good condition, no book $35

Hi Jack,

Sounds like the cruds got into the variable capacitors as well.
Carefully shoot some Deoxit into the capacitor bearings and contact points
and also do the padder capacitors. An good shot of air in all the innards
will drive out any collected bug dung and other contaminents. Otherwise,
look for lose tubes and other parts. Let's face it, these old rascals are
55 years or more old and need a bit of TLC to keep them purring. You may
wan't to verfy that the 1 mhz crystal calibrator is stable--they can get a
bit wobbly after 50 plus years. The 221 should not move all that much after
a reasonable warm up, but keep in mind that they were a 0.01 percent of Fo
instrument in calibration accurace and that may be as good as it gets. They
will drift a bit (50 hz in 30 minutes perhaps). Clean-scrub-repalce old
carbon resistors-leaky tubes.

This would make a fine restoration project for someone with the time. The radio is original and complete with no damage, mods -- or holes in the case of chassis. It will need a new speaker, dial cords and re-capping in addition to a good cleaning.
The side and front of the of case are OK but the top needs a good sanding and repainting. I used an EC-1B on 40-meter CW as a Novice 45 years ago. Had hoped to get this one back to near-original condition but the work schedule just won't let me. Asking $35.00 plus shipping.

Adrian,

Welcome to the group. The Hammarlund HQ-150 offers a q-multiplier and a crystal filter. It is a bit older in style than the equally good HQ-145 and HQ-160 models. These are still fairly modestly priced though the readout is not too good in any of the aforementioned models. There are available a couple of outboard LCD digital displays available which will easily interface to most of the older receivers.

I hope you can find a bargain!

regards from Tanzania,

Dave Heil 5H3US, K8MN

Subject: BC-375 Transmitter Tuning Unit wanted (WW2 Surplus)

Tom:

I have a TU-8B and also may still have the VLF model -- think this one is a
TU-26B. Also have a couple of cases and front panels -- will have to check
which --B unit they are from.

My first rig was a 40-meter CW trans that was built in a TU-7B -- with a 6L6
driving an 807. It was a great little set and I wish I still had it.

I'll go to my storage unit this after to check what I have. Let me know your
needs. You are right on --XB . . . where X denoted the (approximate) frequency
of the unit. I can make you a package deal on everything I have -- since I may
be moving out of state in the near future and really don't want to pack and
haul these units again.

Gang --

Whilst at Dayton this year, one fellow had an HT-44 and SX-117 that were new in the box, apparently never opened. He told me that the current "bid" was $2,200 !! That was Saturday morning at about 10:00 AM. Anyone know if he sold them, and for what price?

(No, I'm not interested, just curious...)

From: "Jack Taylor"
Subject: Drifty BC-221?

Brought home a 'new BC-221AE'. Nice and clean inside and all tubes check good. At first it didn't want to operate but a dose of contact cleaner on the front panel switches brought it back to life. It's been many years since I last use one but it seemed to me these are pretty stable units after a 30 minute warmup.

This unit however, exibits a slow drift even after hours of operation. It additionally warbles with an ever so slight jostling to the table upon which it sits. If this is NOT a common occurance, anyone have pointers to a cure?

73 de Jack

From: "Bob"
Subject: Drifty BC-221?

Hi Jack,

Sounds like the cruds got into the variable capacitors as well.
Carefully shoot some Deoxit into the capacitor bearings and contact points
and also do the padder capacitors. An good shot of air in all the innards
will drive out any collected bug dung and other contaminents. Otherwise,
look for lose tubes and other parts. Let's face it, these old rascals are
55 years or more old and need a bit of TLC to keep them purring. You may
wan't to verfy that the 1 mhz crystal calibrator is stable--they can get a
bit wobbly after 50 plus years. The 221 should not move all that much after
a reasonable warm up, but keep in mind that they were a 0.01 percent of Fo
instrument in calibration accurace and that may be as good as it gets. They
will drift a bit (50 hz in 30 minutes perhaps). Clean-scrub-repalce old
carbon resistors-leaky tubes.

does it have a voltage regulator ..??
if so is the tube good?

From: cwhitt807@aol.com (CWhitt807)
Subject: FS: Echophone Commercial EC-1B receiver

This would make a fine restoration project for someone with the time. The
radio is original and complete with no damage, mods -- or holes in the case of
chassis. It will need a new speaker, dial cords and re-capping in addition to
a good cleaning.
The side and front of the of case are OK but the top needs a good sanding and
repainting. I used an EC-1B on 40-meter CW as a Novice 45 years ago. Had
hoped to get this one back to near-original condition but the work schedule
just won't let me. Asking $35.00 plus shipping.

Chuck, WB4TEO
Sanford, FL

Date: 27 May 2000 23:43:09 GMT
From: tubepwr813@aol.com (TubePwr813)
Subject: FS: For Sale List

Shack Spring Cleaning List 5/27/00

All items are as is. Items will be listed as working or not. Most items I
can supply digital photos of (or can take). Prefer payment to be US Postal,
Bank or International Money Orders, checks are ok, but will hold up shipping
until they clear the bank. Shipping is additional. Digital pictures can be
supplied for most items. On with the list.......

National SW-3 using the 32 and 33 tubes....this rig is clean and works well. It does have a few items to note....a "bird brain" put a heaphone jack in the lower right corner of the rig (removed now). I carefully filled it and texture painted the patch job, which matches the original black texture paint very well....The repair job is virtually not visible as pictures show. One of the coil sockets was cracked...just a bit and was repaired. An original National coil set for 80 meters is included with the rig. Also, I believe I have 4 empty coil forms, maybe 6..... made by a fellow in IN...that will go with the set for your winding pleasure. These are very nice quality coil forms. This is really a neat radio. The best regen out there....(my opinion) Unfortunately the doghouse power supply does not come with the set. I used it with a little hombrew power supply that I wish to keep. Selling Price for the above $350 Prefer pickup, but will ship. OFFERS??

Military Spy Radio...GRC-109.....I have the 3 pieces, Transmitter T-784, Reciever R-1004 and Power Supply PS-2685. This rig works quite well. The reciever was aligned and is quite accurate. A manual comes with the unit. Selling price $280 Set is heavy, but shippable.

AEA CP1....RTTY demodulator terminal unit. Not sure if it works, it was used with a C-64 on RTTY. It is clean and unfortunately I dont have the manual for it. Price: $25

Drake C-Line... R4-C, T4XC, MS-4 and AC-4 all interconnecting cables and manuals. no mic....160-10mtrs... Sherwood mods are in the R4-C, all xtal filters too. This is a great station, used it to work through RS-12 all the time....nice for split band operation...but I cant keep all these rigs.....hi Price: $545 I will throw in a new set of finals too. Prefer pickup, but will ship...heavy

SBE-34....This is a compact travel transciever, solid state, except for the driver and finals. It works, but could use an alignment. The service manual an operating manual come with the rig....The original SBE mic does too...this rig also has a Collins 2.1khz filter in it as originally supplied. The radio is clean and in good condition...it does not appear to have been in a smoking enviroment....I dont smoke...so none of these rigs have been exposed while they have been staying here in the shack :-) This rig is also capable of 12 VDC operation, though I have not tested that feature. Price: $175

Morrow Twins with Homebrew Supply......The MB-560A and the MBR-5. The two rigs are joined together (by their feet), but can easily be separated. They work well and the supply easily powers them....it is 70lbs A manual copy comes with the setup. I prefer pick up on this item, unless the Power supply is not wanted. Power supply is not shippable. Price either way is $325

Heath HG-10 VFO....Good condition, but could use a bit of tlc. I have never used this. It was purchased as a spare that was never needed....Price: $50

Harvey Wells "Z Match" ....this has a stock wattmeter/swr meter in it....nice condition. No manual. A rare unit. All original. Price: $165 (Holding)

Yaesu FRG-7 Shortwave Reciever....This unit has many of the "Gilfer" mods. Works ok but, could use a fresh alignment. (Can be tricky to lock the mhz, but it does lock.) Rig is clean and has great audio and accuracy. Manual comes

with unit. "D" internal battery tray is NOT in the radio. Price: $175

Hallicrafters S-38.....Rough condition, rusty on the inside, but with "tlc" could be brought back, not working, but original right down to all of the capacitors from what I can see. Missing bottom cover, was cardboard I believe? Price $35

Heath HD-1418 Audio Filter, brown series....works ok , but speaker output low. Good condition. Comes with original manual. Price: $40

Drake Theta RTTY Terminal unit, Mint condx stand alone unit with a B/W monitor. Original manual. $215

Universal M-900 Shortwave Decoder with B/W monitor. All in excellent condition. With manual. This is a stand alone unit....no other computer needed $300

Heath SW-717 Shortwave Receiver.....excellent condition $135

Heath HR-1680 with the HS-1661 Speaker.....very good condition, Receiver works well and looks good too! Will not separate the pair. Manual included $215

Kenwood AT-200 Antenna Tuner good condition, manual included $150

Lampkin Freq Meter good condition, no book $35

From: Chris Suhar
Subject: Heathkit HX-10 "Maurader: question

I owned one for several years. It is an outstanding rig. Quite stable on ssb compared to the Apache with the adapter. The Maurader was a filter type ssb rig as opposed to the ssb adapter for the Apache which was phasing method. The potted power transformer was the weakness of the Maurader. Peter Dhal made a bunch of bucks selling replacement transformers. If you are fortunate to pick up a Maurader with one of his transformers in it, you will have on FB rig.

Subject: Help w/ drake tr-3

Check out this site and download the TR4CW pages. Operation of the TR3and 4's are very similar. You can get a TR3 manual from The Manual Man, etc. on the web. Just be sure to keep your key down time short during tune up to prevent over heating the final tubes. Get a watt meter and dummy load that will handle 300 watts. You will need a high impedance mic ie. Sure 444 or D104.

Subject: Kenwood TS-600 6M all mode @ $162.49 on ebay:

Kenwood TS-600 all mode six meter base station. Operates in SSB/CW/AM/FM with power output adjustable from about 500mw to 12 watts. 110V AC or 12V DC. This radio does not have an offset for repeaters or a PL board. Very good cosmetically and excellent electrically. It has a small chip off the front bezel under the S-Meter that is difficult to notice. I've owned this radio for 15 years and am selling it due to me upgrading my license. I prefer to concentrate my efforts on HF. If my picture doesn't show up please go to : http://hometown.aol.com/yardleyite/page1.html Happy bidding and 73!

Adrian,

Welcome to the group. The Hammarlund HQ-150 offers a q-multiplier and a crystal filter. It is a bit older in style than the equally good HQ-145 and HQ-160 models. These are still fairly modestly priced though the readout is not too good in any of the aforementioned models. There are available a couple of outboard LCD digital displays available which will easily interface to most of the older receivers.

I hope you can find a bargain!

regards from Tanzania,

Dave Heil 5H3US, K8MN

No. So far you're the only one to make that rather unsupportable
conclusion.

Did you read this thread? From the start? I doubt it. Let me copy in one
of my earlier comments:

>> >> I'm not quite sure if there is a correlation between gun control and
>> >> taking away our frequencies, aside from the general issue of
government
>> >> control.

I thnk Dan Fox's reply was tounge in cheek, so why don't you chill out
Lenny?

>
>If I had any doubt of my pro-gun control position

I'm anti-gun control and proud of it. If you don't like it, that's just
too bad. Deal with it. I don't back down from my positions just because
someone doesn't like it.

>
>Another hint: Scientific studies regarding the danger, if any, of exposure
>to RF, are not at all likely to have been designed to take away your
>frequencies, even if funded by the government....

[snip]

Lenny, chill out...take a deep breath and some valium...learn to recognize
humor when you see it. Me thinks YOUR the one so paranoid about us anti-gun
folks....If you don't want to own a gun that fine by me.

Subject: What a Bargain !

In article <8ghetkgup1@laurel.tc.umn.edu>, "George R. Gonzalez"
wrote:

> If he'd invested the $595 in 1955 in a 6% bond, it would be now worth
> $8,189.
>
>

In 1968 when I was 16 I had the opportunity to use, and the option to purchase a SX88 from a local older ham who had purchased it new in the mid 50s but had just "upgraded" to Drake equipment, I think an early 4 line. I used the receiver along with my old DX 100 for about a month and wished I could afford the $300 he was asking for it back then. It was way ahead of my SX110 in performance but $300 to spend on a ham radio receiver, even an SX88, back then was as far away from me as the $6,000+ it sold for on e-bay.

After I returned the SX88 to its owner,I used the SX110 for a few years and purchased a NC303 that IMHO was a better receiver on the ham bands than the SX88, and I only paid $125 for it.

The SX88 gained its reputation as the rock solid receiver that went on the first Clipperton DXpedition. The group that went to Clipperton sang its praises in many Hallicrafters ads during the mid 50s. I did not realize that there were so few of them made (anyone have a total?). If I had purchased the receiver in 68 I probably would have sold it at a hamfest in the early 70s for much less than I paid for it when I decided that I really needed something like the TS 520 or the Yaesu 101 more than a couple of boatanchor Heath and National units. Today I wish I had the 88 and the 303 and maybe the DX100 back.

That the SX88 went for as much as it did tells me that there is a lot of money out there chasing a dwindling number of collectable goods. This happened in the US rare coin market in the late 70s and the collector

car market recently. Usually these things run in cycles and follow the fortunes of the economy.

BTW,

The SX88 went for $595 in 1955. According to the Consumer Price Index ((http://stats.bls.gov/cpihome.htm)this would be $3800 today and it It went for almost 100% more than that. As one writer pointed out it did not beat a 6% bond return, but was it possible to get a 6% bond in 1955?

Likewise, I seriously doubt that a perfectly-restored '64 Mustang is
"worth" $50,000, or that a '57 gull-wing 300SL Mercedes is "worth"
$1,000,000-plus, but they are collectables, and get that much.

A perfect HQ180 would qualify as a collectable, or certainly, will be
pretty soon.

From: Bob Weiss
Subject: 1614 Replacement for Ranger?

A 1614 is an industrial variant of the common 6L6, and can be replaced with
the 6L6GC, which is still being manufactured. A plain vanilla metal 6L6
would probably work, as well.

From: "HAMEXAM.COM"
Subject: =AD: Prep for HAM/FCC tests (yes, new tests too!). Download today!=

**** YES! This software is now updated to reflect the April 15th
**** changes in FCC licencing structure for Amateur Radio. The software
**** contains questions for the new and old ham tests as well as
**** the unchanged professional tests.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test
preparation software for the FCC/HAM plus some Professional tests
available for shareware download at http://www.dauntless-soft.com.
(aka http://www.hamexam.com -- easy to remember address--tell your

mates!) The program will drill you for the following elements:

ELEMENT
2 (NEW) Technician
3 (NEW) General
4 (NEW) Extra
2 (pre April 14, 2000) Novice
3A (pre April 14, 2000) Technician
3B (pre April 14, 2000) General
4A (pre April 14, 2000) Advanced
4B (pre April 14, 2000) Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online registration is available--a $30 registration unlocks ALL the questions and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the software. That's less than $3/test.

This software is based around the same engine that drives our FAA test prep software that has helped many pilots score very highly on those exams. (Yes, we got a new hobby and decided it was time to write software for it, too!)

Thanks for your time. We look forward to your visit!

From: Matt Erickson
Subject: Broadcast Transmitters ??

Using a BC transmitter on the ham bands is not LEGAL! It's a matter of
bandwidth, the AM generated by a BC transmitter, is much wider than
a rig designed for ham use. Read Part 97 and you will see.

From: "Lamb"
Subject: Drake 2-B dial mod

Hi:

Have never heard of that mod - but the Drake was too "fast". No doubt the
ball bearings are getting sloppy. In that case, there is no way to repair
the drive and a replacement is in order. I have removed and replaced
bearings when I had to but that only solves 1/2 of the problem. Most of the
reduction drives were common - so look for a replacement.

73, Colin K7FM

Date: Mon, 22 May 2000 15:12:21 GMT
From: Gary Schafer
Subject: Drake 2-B dial mod

Bill

Some of the reduction drives can be tightened up by bending in the tabs
that hold the thing together. This squeezes everything tighter. Too bad
drake did what they did to that dial. The rest of the receiver is great.
The dial on the 1A was much better than the 2A or 2B.

Good luck
Gary K4FMX

From: lmgus@swbell.xx.net (Gus)
Subject: GE Radio

Hello, I am looking for some help in identifying a radio. This radio
was made by GE. It is in a large metal box with a rack inside. About
3 feet or so wide x 3.5 feet or so tall x and about 1.5 feet deep. It
has a remote DC head (this is what a guy here called it) with a desk

microphone. This is not a mobile rig. Originally it was used for business freqs around the 6 meter band. There are 4 invidual units mounted on the rack in the box. The top unit is the transmitter and contains 3 tubes along with one xtal and various parts. the next unit appears to be nothing but an amplifier. There are 4 transistors in it and a cooling fan. The third unit is the reciever and really dosen't have very much to see. There is a copper sheild that covers most of the contents of this unit with a few holes in it for tuning. The last unit is really just a control board. There are two relays and a view power switches on it. On the back side of the rack is a board with 4 large paper capacitors and several 1 watt resistors.

The information I have gotten off the box is as follows

General Electric

Station Comb: DM74RAW33
Transmitter Type et-s5-8

Made in Lynchburg VA USA

I think I heard that it might be a GE MASTR series, but i do not know if this is correct or not. Thanks for any help. If you need more information or pictures let me know and I can get you some more information.

I also have a RCA model CMLL4MMB mobile radio that i am looking for information on. This radio has a remote mount head. It is only one freq although it has a place for 3 more in the rcvr section. This was a UHF business radio.

Any information on either radio including user manuals and schematics are welcome. thanks

Date: Mon, 22 May 2000 21:39:14 -0400
From: Jim Campbell
Subject: GE Radio

It sounds like you have a GE Master Professional (Master Pro). There should be three tubes in heat sinks. The smaller one is an 8106. I've forgotten what the number on the other two is but it is the same on both. Rated at 100Watts output. In the VHF low band that radio had 3 or 4 splits. That is, the frequency determining parts (caps and coils) changed from split to split. If yours is a lo-band HI-split it may tune into six easy. If it is a mid or lo split it might take a lot of work.

Send me the ER- number off of the receiver and the complete ET- number with REV and I'll see if I still have a book on the units. I'll see if I can give you a little more help.

Don't get alarmed that there are blank holes in the chassis. There is a big hole for the noise blanker and most base stations didn't have a noise blanker.

I don't remember the RCA numbers so can't help you on it.

Jim, K4YM

Subject: Looking for dual arc 5 rack

Thanks fer info-Ive gotten 2 or 3 different answers on my request- The only
dual racks inre arc5 are double xmitter racks? Is this correct? Im not one to
destroy gems of ww2-! I wanted to side by side mount a pair for ham use and
total cw op fun. I also saw in my old conversion manual that they put a rcvr
rack into a double xmitter rack and it looked great.Ofcourse the stuff was
easily available then. Anyways 73s Lew-KlNDV If I can find separates -Ill
take ur suggestion

From: Steve Fried
Subject: Speaker for Hammarlund?

I believe the HQ150 used the same speaker as the HQ140X. This was an all metal
enclosure not the S200 speaker. The S200 was a speaker used with the HQ160,
170, 180 types. The S200 had a grill cloth front. The HQ150 speaker had a
metal front with perforations. Am I not correct on this?

From: simserv@inmind.COM (Phil Bartells)
Subject: Tubes for sale, mobile comm types

I have the following tubes for sale. These were purchased in a GE Mobile Communications tube caddy and are all New in the Box, except for 2 of them which have no box but are still new. All are GE manufacture unless noted. They date from the mid to late 60s, and have been stored in a basement since then. Guaranteed to be new, returns OK unless filament is gone, buyer pays shipping both ways. Prices shown are per tube, and are about 70% of list price. Multiple purchases will be discounted, shipping is extra. HEY, If you don't like the price, make an offer, I might say OK! Email with any questions but I won't be in email contact from 5/24-26 and will respond on 5/26.

Thanks for the look, 73... Phil

Hi Adrian,
One of the better known (and used) general coverage receivers
of the valve era is the RCA AR88. I have the standard AR88
and also the AR88LF, which goes down to 74KHz.
There are lots of these sets around in the U.K., they are quite
often seen being sold at radio rallies. Expect to pay anything
between 40 to 70 quid for one. The only problem is the sheer
weight - 110lbs!, a true "boatanchor" in the real sense, very
solidly built, but I would recommend the AR88 anyday in preference
to some of the highly-priced over-rated modern rubbish.
Best wishes,
Duncan G4DFV.

Don't know about the availibility in the UK, but here in the US there is quite a following for the Collins designed R390 and R390A. These were built for the military by several contractors in the 50's, 60's (some even later than that). They are quite a radio. At 26 tubes(valves) and 85 lbs., they are also in the "heavy metal" boatanchor realm.

Good luck,

Barry - N4BUQ

Adrian and Dave:
I will second that. I just got an excellent condition HQ-150 and it sounds wonderful. The radio is sensitive and looks great. In fact, it dominates the room. I have several digital receivers but this old set seems to pull in just about anything the modern ones do. Last night I listened to programs on Radio New Zealand from here just north of Boston MA. The damn thing is built like a tank!

I have one R-390A in decent shape for sale.
Front panel is in good shape. Minor scrapes have
been touched up. Knobs could use a repaint.
Mechanically and electrically ok.
Has bottom cover. No top cover.
Replacement meters.
Aligned and re-tubed about 2 years ago.
Copy of manual.

This was Walt Bauer's personal R-390 for
those of you who knew him. I have been keeping
it as a spare for the one I have in operation but
decided I need the space more than a spare.

$325.00

Pick up only in Owosso MI or will meet up to
150 miles.

I can email pictures to anyone interested in seeing it.

Mike Srock

The B40/A/B/C all use a CV303, commercial equivalent EF22 for the BFO. They can be found at rallies. If not Wilson Valves still list them.

2771. RCA RF Amplifier Single 4-400

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-29 00:00:00 UTC
From: Chris <ck5@ix.netcom.com>
Message-ID: <3932BCEE.600@ix.netcom.com>
Source record: 65944
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

I have a beautiful Commercial RCA RF Amplifier 24-54MHz. It's is a grey hammetone 3' cabinet with heavy power supply on the bottom. It has four meters and two holes so you can view the nice glow of the tube and a nice blower. Reminds me of a Globe King in size. I have pictures if anyone wants to see this. $400 about 200lbs
73 Chris VE3NGW/W4 Florida

2772. Wilcox 96D Transmitter for sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-29 00:00:00 UTC
From: Chris <ck5@ix.netcom.com>
Message-ID: <3932BD21.57C3@ix.netcom.com>

Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

I have a Wilcox 96D transmitter for sale. 1953 built. This is the one
with the works in a drawer slide out cabinet. Tall and narrow.
Has two 250THs in it now but two 450THs can be used. Excellent design
with large Jennings Vac variable. No power supply.
It is in very nice condition. I have JPGs on request.
$300 pick up or you crate from FtLauderdale Florida.
Chris 73 VE3NGW/W4 Florida

2773. Electrovoice 418 mic stand new old in the original box

Bought one for $50 that had an open IF transformer. After fixing it, I found it's performance O.K. but not great.
I traded it for a Heathkit SSB transceiver, then traded that rig for other stuff. Quess that I should have kept it for the big money on E-Bay.

From: "Bob Bachus"
Subject: Drake 2-B dial mod

I don't know if this will help or not, but I ran across these guys
searching for something else. I have two 2-B's and someone had
attempted to increase the tuning ratio by reducing the drive shaft
diameter on a lathe. This however reduces the drag - less surface area
for the string - and it makes slippage a problem if you turn the knob
too fast. The reduction gears offered below - and I know nothing about
the company - may be a solution. Please keep me in the loop - I would
be interested in how you resolve the problem.

From: n2cqr@erols.com (Bill Meara)
Subject: Drake 2-B dial mod

Thanks to all who provided advice and suggestions.

Last night I pulled out the old reduction drive I did so by just loosening the shaft and putlling it out (without messing up the string arrangement!) Sure enough, the drive was really very loose. It liiks to me like it may have been damaged at some point. I move a lot, and I think the tuning knob may have been hit an pushed to the side at some point, seriously loosening up the whole drive.

I found an old catalog that offered replacement drives: Oren Elliott Products of Ohio. I last dealt with them several years ago and they were very friendly to amateurs. I was please to find them on the web (just to a Yahoo search for Oren Elliott). I've ordered a replacement drive. I'll let you guys know how it works out. I'm looking forward to smooth and reasonably slow tuning with my 2-B.

BTW: For those of you who have un-moded 2-Bs: How does the string shaft come out through the front panel? Is there just a hole there? It looks like the diameter of the hole on my front panel was significantly increased to accomodate the reduction drive.

>with REV and I'll see if I still have a book on the units. I'll see if I
>can give you a little more help.

I looked over the unit and found a bunch of numbers with revisions. I
think these are the ones you want.

Transmitter type ET-55-A
on the transmitter is 4ET55 and then handwritten by it is A51

in the receiver is 4ER39 and then hand written by it is C79

There were two large tubes marked 7984 USA and one small tube (did not
get a number on it) that were in heat sinks.

On the Transmitter cover was a small diagram with 19C303686P2 REV 3
on the boards in the transmitter PL19E500877g 6 and PL19C30354G8

On the receiver cover was another diagram with 19D40481P6 REV 3
on the boards in the receiver PL19E500873G6 REG 6

On part of the panel with power and volume was the numbers
4EP38A12 REV A and 4K010A12 REV A

There were 4 transisters in the case by them selves with the numbers
185 700PI 7752
185 115876 7445
185 6760PI MEX 8426
DELCO GM 115267 7109

I know that you did not ask for these but I found out that at one
point someone decided that it did not need full power and put in
smaller transisters. I guessing that it is one of these parts.

I hope that these will be one of the ones you are looking for. If not
let me know and I will look again.
Thanks for the help.

Subject: Heathkit knobs & paint

Hi all

I've just acquired a lovely old Heathkit SB-102, and I'm on the look out for
two or more of the dark green Heathkit knobs as supplied with the SB series
of radios. Must be in good condition, with silver inserts intact. If you
have one or more of these going spare, please e-mail me with the price you'd
want inclusive of P&P to the UK. Alternatively, if you know of a supplier
for these knobs, I'd really appreciate their contact details.

I'm also looking for one of the solid metal dial calibration knobs for the
same series of radios, but again it must be in very good condition - the one
I have has been polished so much that the shiny coating has all but
disappeared.

Finally, anyone know of a contact in the UK or abroad who can supply the
original Heathkit bluey-green paint? I'd like to have the case of the radio
re-sprayed, but only if I can find the original colour.

Thanks in advance.

Subject: NEED HELP with ILLEGAL BROADCAST XMTR

I operate an old AM Broadcast transmitter on 160-meters.

Is there a way I can easily shunt the illegal high-frequencies to
ground so that I can comply with FCC bandwidth rules.

I was thinking of installing a mechanical filter in series with the
mike cable.....maybe a 5pF 10Kv vacuum cap in series with the
mod transformer......how about a tuned band-stop filter on the
RF output tuned to each of my lower and upper sidebands.

Any other Broadcast Transmitter owners out there with more ideas?

Pat

Anyone knows that a mechanical filter is an rf devise and has to be put
in the antenna line.

What "illegal high-frequencies?" There are no specified bandwidth in the
FCC rules other than "good engineering practice." If you think the

transmitter was poorly engineered, then limit the audio bandwidth at the low levels (i.e. the line-level feed to the transmitter). You can built a filter or use an equalizer to cut the higher frequencies.

Date: Tue, 23 May 2000 19:50:07 -0500
From: "Bismarck Wichy"
Subject: NEED HELP with ILLEGAL BROADCAST XMTR

Pat,

The only way to do it is to control the audio freqs going into the high level modulator. There are many ways to do this.

You could make yourself a low pass audio filter going into the audio pre-amp stage. This works but I don't suggest it because you will have to use a computer to model the filter and then build it. There ARE formulas you could use but in the end, it's pretty much a cut and try thing... as all of our voices are vastly different.... but you could do it and if done correctly will provide average performance. You could add a volt amp and make an ALC circuit of sorts.

The next method I suggest is to purchase an active audio equalizer. There are a bunch of cheap ones for CB'ers but I recommend going with W2IHY's unit. I heard many 20M DX'ers using it and can be adjustment many different ways... go to WWW.W2IHY.com for a demo on it - even comes as a kit.

The last way is the way "real" broadcast stations do it. Purchase an Orban Optomod (or OptoCrud as we BC engineers like to call it). It cost 6 g's BUT it is well WORTH it. It's a audio equalizer and compressor built into one. When properly setup for AM - nothing can touch it. PERIOD. You will have to buy it new as you seldom find it in the used market and when you do they are almost the same price as new.

A cheaper route is to use a cheaper commercial audio limiter - compressor like CBS Labs Audio Solidstatesman. You can find these all over the place for $450 and that's about what they are worth.

So to sum it up - limit your audio freqs to restrict your RF bandwidth.

I assume now you have nothing but a Mic to your broadcast transmitter. As you found out - it doesn't take much to go over 100% modulator creating splatter and making you "Mr Popular" with your SSB/CW buddies. If your "flying by the seat of your pants" and your transmitter has a "modulation meter" I suggest you stay less than 30% on average - your peaks will still be hitting 90 and 100 + even then.

If you have an OptoMod you will find your average will be at 85 - 90 % while peaks will still be at or below 100% (or 120% Positive if your transmitter is setup for it). Like I said - it's expensive but worth it....

If you need more help, give a call to your local AM station. Most AM BC engineers are hams. and who knows... if you like tinkering with your toy - you might find a job doing it for real....

hope that helps ... WD0HCO

Hey Pat, maybe you could find one of those foreign correspondent courses about
radio and stuff. You know like the voice of america guys took. I bet they know
how to limit the bandwidth with their antennas. Then you wouldn't be risking
burning up those mechanical filters.

Geezz, look at what you've gone and done now!

Subject: NG Charter Suggestion

Here is a suggestion.... take it for what it's worth.... What about
using FGS for those interesting eBay auctions and other comments?

FGS stands for "FOR GOODNESS SAKES"

It goes along with FS and FA subject headers.

Lets those that want to read that sort of stuff (I do) and allows others
to pass on it.

Sound like a good idea?

From: "Leith Jennings"
Subject: Suitable replacement for Ranger insulated VFO coupling

I had the same problem and solved it by the use of a Dremel moto tool to pop out the rivets. Then I used the Dremel to sand down a piece of PC board to about half thickness. Then I marked out the board and drilled 2.5mm holes and used 2.5mm screws to put it back together. The Dremel was then used to grind down the screws to rivet size and the whole thing was far better than the original. You do have to be careful in getting the marking out correct or the two sides will not turn concentrically

My Ranger is literally a total rebuild and it's coming along quite nicely. Hope this helps

=======
Ah more fodder for the Auction Bashers!!!
They should see the 57 Chevy Convert that just sold here for $30,000 -
original about $3,000
OR the Texaco Airplane model that sold for $19.95 -- now $172.50
ETC
Collectibles ARE!!

$30,000? Prices must be coming down. I saw a black '57 convertible with red interior and tri-power with a STARTING bid of $35,000 in Sun Valley Idaho in 1988! Don't remember what it finally sold for.

It finally sold for $6800 but it was a fully restored (mechanical and electrical) unit.

Frankly, even fully restored, a $6800 pricetag is a wee tad on the nuts side. I'm sure the fellow who sold the radio is quite happy with the arrangement, however ;-)

A 1957 Chevy convertible is one thing, but an SX-88 ... well, it's just another radio ... :-)

Why does it auction so high? I notice the sx-88 model came out in
1954-55. Surely some of the later models, the sx-101, for instance,
were better electronically?

This is the rarest of the rarest so for someone that has the money or
two people that have the money and really want it so what.

This has nothing to do with how it works.

Not many made and hardly ever see a good one for sale.

Rarer than the SX-115.

Some people have more money than common sense. Common sense isn't very
common.

Date: 23 May 2000 20:28:53 EDT
From: WA0KDS
Subject: THE ! ! ! Classic Hallicrafters - F/A

If you had lots of money then how much you pay for something is really
not an issue and has NOTHING to do with common sense. Common sense is
when the guy buys the item for big money and then throws it into a leaky
storage shed never to be seen again. I have been a witness to this kind
of sickness to many times.

Take the advertisements on TV when they tell you to buy their fancy new
Truck for $35,000 then take it out into the roughest outback you can
find and distroy it. So why the H buy a new Truck to do this.

Same goes with the radios. Might as well buy an S-120 for $500 and
destroy it.

Subject: Tubes for sale, mobile, ham, cb types

I have the following tubes for sale. These were purchased in a GE Mobile Communications tube caddy and are all New in the Box, except for 2 of them which have no box but are still new. All are GE manufacture unless noted. They date from the mid to late 60s, and have been stored in a basement since then. Guaranteed to be new, returns OK unless filament is gone, buyer pays shipping both ways. Prices shown are per tube, and are about 70% of list price. Multiple purchases will be discounted, shipping is extra. HEY, If you don't like the price, make an offer, I might say OK! Email with any questions but I won't be in email contact from 5/24-25 and will respond on 5/26.

Thanks for the look, 73... Phil

Subject: What a Bargain !

Just when you thought eBayers couldn't get any sillier! This SX-88 closed at $6800.00! I know, it truly is one of the rarest of radios, and the rig is one of the hottest receivers ever designed, current models included, but let's touch our feet down on Earth for a moment!

The photos are very good, and reveal, contrary to the text decription which claims the knobs (and *everything* else) to be perfect. The knobs have bits of pitting, scratches, mild discoloration, and worn finish. The re-paint on the black trim parts of the cabinet appears to be uneven and visibly thick in spots. The lettering on the front panel is good, but in spots it is slightly faded. Overall, this is a quite good looking rig, but not "mint", whatever that means.

I'll take it on faith that the radio works flawlessly. But $6800.00 is far too much money for it! I would say $3K to $4K, certainly no more. Not that I would pay that much for *any* radio, no matter how much money I had burning a hole in my pocket, not unless it was early Marconi or Collins prototype! Or maybe Mahlon Loomis' induction set! Once again, we are reminded how badly internet auctions warp value--this price has nothing to do with history or engineering; it's about wish-fulfillment and instant gratification. I wonder if the "winner" will follow through on his bid? I suppose that will depend on which he possesses more of--money, or brains?

This memo is to all who have given faithful service for the preservation of democracy and freedom throughout the world, not only here in the United States. Today I got a phone call from a Bank telemarketer and was taken by the fact that capitalism is alive and well in the country I fought and served for. I could not believe it but then again it is what sacrifices veterans have given that preserves that right to be working or not on a day where we all should pause and reflect on those who died to keep these freedoms. I went to a parade today to observe and remember. Sadly the turnout was small. All those who benefit from those fallen comrades deeds were busy enjoying their freedom of choice to stay home and not attend.

Keep those military radios going folks. Those like all the history items that are kept for display or use could have been most likely used by some of those brave souls who gave so much for a sometimes undeserving and forgetful nation.

Be it as it may, I am happy and grateful to all those who served and to be a part of the group of those who do remember.....

Just look at all this controversy I find... Forgive the confusion- it has the factory 11 meters. In addition (the one guy got it right), my Yaesu tech friend (the other one was also right) installed the two extra 11-meter crystals in the 10-C/D slots. The amp and the display are sold. At this time, I'd let the 101-E and the ext. VFO go for $300.00 firm + shipping from 91406. If anybody's interested, respond email to: toomuchstuff@pobox.com. Radio comes with 1 set new driver and finals (NEC) and several sets of good, used tubes, factory owner's manual and factory service/mods manual.

Source record: 65974

I need a speaker enclosure about the size of an LS-3 (approx. 8" high,
6" wide, by about 3-4" deep). Condition is not too important, if all
it needs is a re-paint. The one in particular I'd like to get has a
coarse mesh grill on it. But, I'm open to offers of whatever. I need
it for a WW2-vintage RCAF receiver. Just something that's metal and
looks like it "belongs"...hi!
Thanks.

2802. FA EV-619 desk mike similar to "Frequency" mike

Source record: 65979

Hi. I have a Heathkit HW-9 for sale. It has two mods. One mod is a spotting switch on the front, and a Curtis keyer board, mounted inside on a standoff spacer. There is a speed control on the rear panel, and a jack for keyer paddles. It does have the WARC bandpack installed. Condition is very good. Works well. Original construction and operating manual included. $275/obo plus shipping, or will consider military surplus HF manpack gear or vhf lowband gear, such as PRC-68, 25, 77, 126, 127.
Thanks. Jim W7LS

Have forsale a very nice looking Drake T4XC with the AC-4 power supply. the T4XC needs a new set of finals. only putting out 40-50 w's. I tried a spare set that I have and got 130 w's out of the radio. the serial number is 25646 on the T4XC and 44934 on the AC-4.I am asking $300 shipped u.p.s. in the u.s. I have a copy of the manual for the T4XC.I also have a MS-4 speaker that I could throw in for $50.so if you have a R4C and need to make a complete station this is the setup for you. From: "Mike Srock"
Subject: FS: R-390A/URR RECEIVER

I have one R-390A in decent shape for sale.
Front panel is in good shape. Minor scrapes have
been touched up. Knobs could use a repaint.
Mechanically and electrically ok.
Has bottom cover. No top cover.
Replacement meters.
Aligned and re-tubed about 2 years ago.
Copy of manual.

This was Walt Bauer's personal R-390 for
those of you who knew him. I have been keeping
it as a spare for the one I have in operation but
decided I need the space more than a spare.

$325.00

Pick up only in Owosso MI or will meet up to
150 miles.

I can email pictures to anyone interested in seeing it.

Hi Adrian,
One of the better known (and used) general coverage receivers
of the valve era is the RCA AR88. I have the standard AR88
and also the AR88LF, which goes down to 74KHz.
There are lots of these sets around in the U.K., they are quite
often seen being sold at radio rallies. Expect to pay anything
between 40 to 70 quid for one. The only problem is the sheer

weight - 110lbs!, a true "boatanchor" in the real sense, very
solidly built, but I would recommend the AR88 anyday in preference
to some of the highly-priced over-rated modern rubbish.
Best wishes,
Duncan G4DFV.

From: n4buq@aol.com (N4BUQ)
Subject: Newbie with a question

Don't know about the availibility in the UK, but here in the US there is quite
a following for the Collins designed R390 and R390A. These were built for the
military by several contractors in the 50's, 60's (some even later than that).
They are quite a radio. At 26 tubes(valves) and 85 lbs., they are also in the
"heavy metal" boatanchor realm.

Good luck,

Barry - N4BUQ

From: "Brian Denley"
Subject: Newbie with a question

Adrian and Dave:
I will second that. I just got an excellent condition HQ-150 and it sounds
wonderful. The radio is sensitive and looks great. In fact, it dominates
the room. I have several digital receivers but this old set seems to pull
in just about anything the modern ones do. Last night I listened to
programs on Radio New Zealand from here just north of Boston MA. The damn
thing is built like a tank!

From: Andy <bea@mediahouse.it>
Message-ID: <8gttrv$131$1@nslave1.tin.it>
Source record: 66041

I have this old vintage rig, and i like the glowing of it's' tubes.
It had been modified by one of the previous owners
with 88,45 and 11 meters.

I tested the radio on all bands and i have measured a power output
of approx. 160-170 W on CW.
On 11 meters band the power is very low, 60-80w.

the 11 meters xtals are inserted on 10c and 10d bands, 10a
and 10b position are fitted with original 28-28.5 and 28.5-29 xtals
the power on 10a and 10b is about 120-140w.

I was asking myself that perhaps 10c and 10d bands haven't' been
retuned after the insertion of the 11 meters xtals. How can I tune
this bands to obtain the correct power output?

is it possible that the tubes are exausted?

please answer at bea@mediahouse.it

bye

PLEASE do! Those of us who are a bit to young to have lived through it can get a sense of what it might have been like when we can see and touch some of the real stuff. Who knows where that radio was in 1944?

That tangible, palpable sense of history that makes a difference in people's lives comes from their ability to feel like they were there, and these radios are bits of history that are vivid reminders.

Thanks to the posters who preceded me on this thread.

Thanks to Chris Cooper for the info on the B40 BFO valve, which is a =
CV303, equivalent to a EF22. My apology to the readers for my earlier =
sarcastic comment about a nil response. I'd forgotten that last weekend =
was a holiday weekend. Most people in their right mind would have been =
out enjoying the good weather, instead of being glued to a computer.

Regarding the P104 receiver, I do know that it requires a separate power =
supply, which connects via a cable terminated in a 6-pin Jones plug. =
This appears to be identical to the Jones plug as fitted to the Air =
Ministry R1155 receiver. There is a good chance that the Museum of =
Communication will have the correct power supply.

I'll keep you posted on developments at the visitors' centre for the =
Tall Ship at Glasgow Harbour. As well as a workshop facility, part of =
which will be a display, we hope to have a mock-up of a ship's radio =
cabin, dating from WWII. The Marconi CR100 will be used for this. To =
encourage a "hands on" experience for the visitors, it is intended that =
two listening booths will be provided, one probably with the =
aforementioned B40, and the other, with the P104, provided I can get it =
working.

Bye for now, and 73 from John GM0KTO

Subject: Collins 75A-4 Parts?

I need the meter sensitivity pot for a Collins 75A-4 receiver - mine is one of the earlier models where the pot is mounted on top of the chassis. Anyone have a parts rig or know where I can find a replacement pot? Please reply via e-mail.

73,

Subject: FS: Shack Cleaning List (revised)

Shack Spring Cleaning List 5/24/00

All items are as is. Items will be listed as working or not. Most items I can supply digital photos of (or can take). Prefer payment to be US Postal, Bank or International Money Orders, checks are ok, but will hold up shipping until they clear the bank. Shipping is additional. Digital pictures can be supplied for most items. On with the list.......

National SW-3 using the 32 and 33 tubes....this rig is clean and works well. It does have a few items to note....a "bird brain" put a heaphone jack in the lower right corner of the rig (removed now). I carefully filled it and texture painted the patch job, which matches the original black texture paint very well....The repair job is virtually not visible as pictures show. One of the coil sockets was cracked...just a bit and was repaired. An original National coil set for 80 meters is included with the rig. Also, I believe I have 4 empty coil forms, maybe 6..... made by a fellow in IN...that will go with the set for your winding pleasure. These are very nice quality coil forms. This is really a neat radio. The best regen out there....(my opinion) Unfortunately the doghouse power supply does not come with the set. I used it with a little hombrew power supply that I wish to keep. Selling Price for the above $400 Prefer pickup, but will ship. OFFERS??

Military Spy Radio...GRC-109.....I have the 3 pieces, Transmitter T-784, Reciever R-1004 and Power Supply PS-2685. This rig works quite well. The reciever was aligned and is quite accurate. A manual comes with the unit. Selling price $300 Unit is heavy, but shippable.

AEA CP1....RTTY demodulator terminal unit. Not sure if it works, it was used with a C-64 on RTTY. It is clean and unfortunately I dont have the manual for it. Price: $25

Drake C-Line... R4-C, T4XC, MS-4 and AC-4 all interconnecting cables and manuals. no mic....160-10mtrs... Sherwood mods are in the R4-C, all xtal filters too. This is a great station, used it to work through RS-12 all the time....nice for split band operation...but I cant keep all these rigs.....hi Price: $545 I will throw in a new set of finals too. Prefer pickup, but will ship...heavy

SBE-34....This is a compact travel transciever, solid state, except for the driver and finals. It works, but could use an alignment. The service manual an operating manual come with the rig....The original SBE mic does too...this rig also has a Collins 2.1khz filter in it as originally supplied. The radio is clean and in good condition...it does not appear to have been in a smoking enviroment....I dont smoke...so none of these rigs have been exposed while they have been staying here in the shack :-) This rig is also capable of 12 VDC operation, though I have not tested that feature. Price: $175

Morrow Twins with Homebrew Supply......The MB-560A and the MBR-5. The two rigs are joined together (by their feet), but can easily be separated. They work well and the supply easily powers them....it is a beast....hi A manual copy comes with the setup. I prefer pick up on this item, unless the Power supply is not wanted. Power supply is not shippable. Price either way is $325

Heath HG-10 VFO....Good condition, but could use a bit of tlc. I have never used this. It was purchased as a spare that was never needed....Price: $50

Harvey Wells "Z Match" ....this has a stock wattmeter/swr meter in it....nice condition. No manual. A rare unit. All original. Price: $165 (Holding)

Yaesu FRG-7 Shortwave Reciever....This unit has many of the "Gilfer" mods. Works ok but, could use a fresh alignment. (Can be tricky to lock the mhz, but it does lock.) Rig is clean and has great audio and accuracy. Manual comes with unit. "D" internal battery tray is NOT in the radio. Price: $175

Hallicrafters S-38.....Rough condition, rusty on the inside, but with "tlc" could be brought back, not working, but original right down to all of the capacitors from what I can see. Missing bottom cover, was cardboard I believe? Price $35

Heath HD-1418 Audio Filter, brown series....works ok , but speaker output low. Good condition. Comes with original manual. Price: $40

Drake Theta RTTY Terminal unit, Mint condx stand alone unit with a B/W monitor. Original manual. $215

Universal M-900 Shortwave Decoder with B/W monitor. All in excellent condition. With manual. This is a stand alone unit....no other computer needed $300

Heath SW-717 Shortwave Receiver.....excellent condition $135

Heath HR-1680 with the HS-1661 Speaker.....very good condition, Receiver works well and looks good too! Will not separate the pair. Manual included $215

Kenwood AT-200 Antenna Tuner good condition, manual included $150

Lampkin Freq Meter good condition, no book $35

Subject: Hammarlund S meter

Anyone have an s-meter (or plastic lens lens cover) for a HQ-150? It may be the same as the one for the HQ-160. It has an orange background. I just aquired one and it has what looks like a cigarette burn mark on the plastic - works fine but the radio is so clean looking that I'd like to replace that plastic if I can.

Thanks

Subject: Help w/ drake tr-3

Hi all,
I just picked up an old drake Tr-3 transciever and having no experience with tube gear, and no manual, i was wondering if anyone could help me get it on air. It seems to work fine and it's real pretty. But I'm not real sure about transmitting. I got a mic but it dosen't have a PTT button. Which of the three 1/4" jacks on the side is for it? How do I adjust the PLATE and LOAD controls?and those unlabeled knoblets on the side? what are they? do i need a tuner/swr meter? any info you think could help me would be greatly appreciated.

Pat Sed:

> I operate an old AM Broadcast transmitter on 160-meters.

Few years back, we had somewhat the same problem around here on 2M. Some guys decided that an FM signal shouldn't occupy much more BW than a CW sig. Someone figured out where the deviation pots were in their radios and they turned them down to, I think, +/- 3Kcs....It was a royal Pain in the tush to have these "enlighted" ones around, because after you cranked up the volume to hear them, someone w/the customary +/- 5 Kcs. would come on and blow your speaker cone across the room.....Of course, nobody could tell 'em any different, because *THEY* had 1X2 calls, big Swedish cars, and 300+ countries, compared to *our* HR-2B's and HW-202's...

The channel width in the AM BC band is 10 Kcs. Most of the older Xmttrs I ever had experience with started to roll-off rather drastically above 4 Kcs. Some even sounded muddier than an ATT "long lines" circuit...

Splatter, and all the other byproducts of over-modulation, are a different story, though......

Speaking of PCB (Printed Circuit Boards) and a bit of nostalgia wasn't it Zenith that used to advertise (50's / early 60's ?) that they used 'Hand Wiring' instead of using those inferior, troublesome printed circuit boards in their TV's ??

Re: Zenith 'Hand Wired' vs 'Troublesome Printed Circuit Boards'...

I was servicing TVs in the late 50's when that Ad was popular. Zenith was correct! The early printed circuit boards were best at 'Failing'. Zenith was the one brand of TV that could be sold and not seen again for several years. When you did have a service call, it was usually the rectifier tube. And the next long time later, a tube in the tuner if you were 50+ miles from the station like we were..... I still have my memories of really poor engineering designs and equally poor manufacturing processes. Ah, the good old days! Not everything worked like it should have, but we all learned and here we are. Sure has been fun watching it happen.

From: tontoe2001@aol.com (Tontoe2001)
Subject: NC-183D/NC-300 Comparison

the 300 is a better overall receiver as far as all aspects. But is that not true of all Ham band only Vs. General coverage receivers? The answer from most will be yes. The virtues of both receivers must be decided on by what you intend to do with it. The regular 183 by the way is better than the 183d as the latter suffered from its dual conversion if shifting around a lot even after alignment as they have aged. Hence much worse sensitivity on the higher bands. All of them are in my opinion (remember I said My opinion) are very good ol boatanchors in the literal sense...p

Subject: NC-183D/NC-300 Comparison

i've had both but not at the same time..
the 183 is general coverage..
the nc300 is hamband..
i'd say they're equal on sensitivity, stability, and selectivity..
perhaps equally bad!!
get the one that's in best shape..
cheers

From: "Lamb"
Subject: NC-183D/NC-300 Comparison

Many years ago my friend had an NC 183D which he was very proud of. One day the local radio dealer talked him into bringing home a Drake 2B. The 2B ran circles around the NC 183D. It was more sensitive, more stable, more selective and the frequency calibration was more accurate.

We checked the alignment and found it was within specifications. He sold his NC 183D and bought a Drake 2B.

The NC 183D is dual conversion so has less image problems than the 183. But, it is also noisier internally.

Neither receiver will receive as well as almost any modern receiver. Both look like they are out of the 50's and are nice to look at and heavy. It that is what you want, buy either or both.

It's a lot simpler just to pull one of the modulators.
Half the number of tubes in the modulator....
half the number of sidebands...half the bandwidth!

And as a side benefit..... look at how much you'd save
by not lighting that other filament!

From: "David L. Stinson"
Subject: NEED HELP with ILLEGAL BROADCAST XMTR

Hello, Pat.
All the smart-alecs aside, your transmitter is not
"illegal." I've been a ham for near 30 years and
here's one thing I've learned- If a fellow ham
starts telling you that this or that is "legal"
or "illegal," you better check for yourself
because 9 times out of 10 he's as full of it as a goose. ;-)

But this ain't one of them times (Of course not!
I'm talking this time! (heh heh!).
There is no fixed standard for bandwidth of
an AM transmission, barring spurious emissions
like key clicks, parasitics or unintended mixing products
like "splatter." And remember- a lot of guys yell
"splatter" when the real problem is that they
have their noise blanker engaged....duhhhh!

There is nothing illegal about your AM transmitter,
assuming it's run according to manufacturer's specs.
The engineers who designed it had to follow certain
standards and those standards will do fine on the
ham bands. It would be better if you used a
graphic equilizer in the audio line to the transmitter
so you can cut down on bandwidth. I'd suggest cutting
everything under 100 cycles and above 4000 cycles
as a starting point. No one is going to come clap
you in irons and if someone on the bands tells you
that, he's wrong.
Kind Regards,
Dave AB5S

Oh, the humanity, how far technical knowledge has sunk.

In the 60's every ham knew you needed a sharp crystal filter to cut those
pesky sidebands.

I suggest you get two large crystals of potassium cyanide (available at
bigger pest-control stores). Rub them with sandpaper until they're 1.60mm
(160 meters divided by the number of thousanths of an inch per inch) thick.

Now warm up your transmitter real well (turn all the knobs all the waaaay to
the right), and drop the crystals onto the hot output tubes (if the crystals
slide off,
the tubes aren't hot enough yet). You want the crystals to melt and
siizzle.
Now you wont have any problems with the FCC....

Subject: NEED HELP with ILLEGAL BROADCAST XMTR

Pat,

Actually what the guy probably meant when he said broadcast transmitters
were illegal on the ham bands was there "size". The legal size is a 19
inch rack width and most broadcast transmitters are much bigger than
that! If you could dismantle it and put it into smaller cabinets, I am
sure it would be ok then. Of course you still need to come up with a way
to suppress the negative splatter though.

That's why you put "compression" in the audio chain, Gary.
If you put enough compression in the line, you can just
fit it in the 19 inch rack if you push hard.

So.... let's say you're running a BTA-5F on 160 meters....
All the cabinets together are... ohhh.....about 15-20 feet wide.

How many db of compression do you run....
or should it be expressed in pounds per square inch?

My guess is db. Maybe fitting into the 19 inch rack is what
they mean by gain "reduction".

And if you're gonna run it on 80 meters, do you need more or less?

(Damn, I haven't had this much fun with a thread in a long time!)

Here is a suggestion.... take it for what it's worth.... What about
using FGS for those interesting eBay auctions and other comments?

FGS stands for "FOR GOODNESS SAKES"

It goes along with FS and FA subject headers.

Lets those that want to read that sort of stuff (I do) and allows others
to pass on it.

Sound like a good idea?

Subject: Radio Restoration Question..

Hello..

Is it possible to purchase laser printer/ink jet printer paper that will
allow one make your own ' rub-on ' letters/numbers? I've seen the type
where the plastic is affixed to a sticky back (like sctoch tape) but I
was wondering if this rub on stuff is available.

Also, I would appreciate if someone would explain how artwork stencils
are made so that one can airbrush panel labels, etc??
Thanks - Jim

Try Digi-Key Part #TTS-5-ND.

It is normally used for transferring PC artwork directly to a board, but can
also
be used for panel labels.

Subject: Suitable replacement for Ranger insulated VFO coupling

Thanks Leith,

I was kind of right in step with you on the pc board material. I'm in the process of procuring some "filler" layers of glass epoxy pcb material which is .007" thick. This should be just right to allow some flexibility. I think I have the answer to maintaining concentricity of the 2 shaft

couplings. First drill a hole in the material the same diameter as the shaft coupling. Then use the drill as a shaft, by running it through 1 coupling then through the material, then through the other coupling. tighten the screws, and mark the holes on the material. Haven't tried it yet, but sounds good in theory.

7 3,

Subject: SX-88 now over $5000 on E-Pay

So the description claimed.

The pictures, however, told another story.

Pitting, scratches, and missing detail on at least three of the large
knobs. A very amateurish repaint on part of the case. Minor fading of
some of the lettering.

It still looked very good, but it certainly was not "Fully Restored" and
that price is more in line with what you would expect for an original
radio--unrestored perfect condition.

The buyer is going to get what he deserves (assuming he actually follows
through with the deal--fully one-third of all winning bidders on eBay
lots that close at over $500.00 never fulfill their promise to buy),
since he (temporarily) seems to have more money than brains.

No I don't but this will probably do just fine.

Set your preselector to the center of the band you are working. Start
at the ten meter band first. Then go to the 80 then 40 etc.

Dial up the center of the band you are aligning.

Turn on the xtal calibrator and adjust all your mixer, driver,
amplifier pots for maximum signal on s-meter. You will have either 1
or 2 adjustable caps for the transmitter section. After you get the rx
up to snuff, and without moving the preselector, adjust them for
maximum RF output. Remembering to keep the drive low, or you will
overtax the poor final and power supply.

Hope that helps.

As for the oscillators a frequency counter would be nice. Otherwise
use a external rig to check it with.

For the U/Lsb adjustments...The same. Use a known good rig and adjust
for same quality on U/L positions.

Dan/W4NTI

>Would like to try to make it operational again and perhaps put it on 10FM.
>Any source info would be deeply appreciated. Please E Mail direct.

Steve,

The Sonar Model G is in Sams Photofacts volume CB-6. I have it at home.
I can make you a copy of it if you like. I wouldn't want to see you hack
the set up to put it on FM, but it would be great on 10m a-m. Those old
Sonar CB's always sounded great with their push-pull plate modulation,
especially when a good mic was used!

If you wanna get on 10m FM, I have a nice Comtronix FM-80 10m FM rig for
sale or trade! :)

P.T. Barnum would have loved ebay!

Date: Wed, 24 May 2000 07:53:49 -0700
From: Ham
Subject: What a Bargain !

If you analyze the situation, perhaps the price for this SX-88 ***IS A BARGAIN!!!!***

Well, let's see, in 1954 or 55 when the receiver was made a new car would be $2,000 maybe. Now a much better, more durable and long lasting vehicle is maybe 10 times that.

Where I live my house was a new tract house in 1955 and cost $15,000. One of the identical houses with a very minor addition to it for extra space sold for $1,100,000 a month ago after being on the market for 3 days with multiple offers over the asking price. That's a price increase of over 70 times? Make it a 60X increase for an identical house since this one had a very minor addition to it.

Without looking up actual cost of living increases over that period of time, let's use 10X as a rule of thumb and be conservative to base our prices on.

This receiver is for all practical purposes "new" and maybe even better than new with some modern replacements for some components with limited life as a result of our nearly 50 years of hindsight. Don't kid yourself, the Hallicrafters that were NEW during that era were nicely built but a bit of thick paint on the back panel wasn't unusual! Hey they couldn't even decide on proper knobs or color paint on many of their receivers and transmitters!

So, 1/10 th of $6800 is $680. This is equivalent to buying the receiver in 1955 for $680 then.

** Is that unreasonable? What did it sell for new? My 1955 handbook says $595 -- not that far from my ballpark equivalent of $680.

I'm sure that only a few were willing to pay that much for the receiver in 1955. My NC-125 which was a very expensive Christmas gift in 1952 when I was an SWL was ($109 with speaker -- dealer's price not retail) and my parents and I considered it a very expensive gift.

So, given the scarcity (not many made and few for sale just like houses around here) I think that though the price is astronomical, it may be more reasonable than we all want to admit. Items that are considered desirable and scarce these days demand a high price. We are exposed to these high prices due to the connectivity that the Internet provides with the worldwide market and the possibility of finding that "one person" with both the strong desire for that item and the money to pay for it. Something that was very very difficult to do in the "olden days."

If one were to use the same type of extrapolation, a Collins KWS-1 would cost $15,000 or more I'd suspect. Maybe rather than gripe about Hallicrafters prices, we should be buying up "mint" KWS-1s for the going price of $2,500 or so but here again there are more of them around than there are SX-88s!

I'm afraid as much as we'd like it be so, we "ain't in Podunk anymore!" we are now citizens of a vast world and the market is worldwide!

Subject: What a Bargain !

A million bucks for a "tract" house??? Where do you live? You can get a
nice
brownstone in Manhattan for less than that!

Seriously, this sort of then-and-now inflation/value analysis is deeply
flawed in
its very concept. Even the most gifted economists get into deep trouble
when
trying to calculate what the contemporary selling price of goods from a
previous
era might be. All those subordinate comments in TV documentaries to the
effect,
for example, "in 1825 the first steam-driven industrial potato mashers
cost
$185.33, and that would cost blah-blah million today. . ." are nonsense,
and only
serve to awe those who, by no fault of theirs, don't know any better.

The people
who study this sort of stuff all day can't even come up with a
consistent model
of inflation that would allow them to agree on the current value of a
1930/1875/1825 dollar, ad infinitum. Once you reach back more than about
25
years, economic models become completely unreliable, the reasons are
obvious, so
there really isn't any point in talking about "value" in this way.
Money, in a
qualitative sense is what has been most subject to inflation up to
about 1900.
Before then, increasing geometrically as you go back, money was far less
important or central to life, and was used much less often than now,
certainly
not on a daily basis.

Add to the mix that we are discussing the value of a thing that is
neither a true
antique (as Marconi's 1896 demo gear would be if it still existed), nor
is is
still in production, and the problem is compounded. Also, several
generations of
radio receivers have developed since 1955, when the SX-88 was
introduced. So,
from both an engineering and a marketing standpoint, the rig is hard to
evaluate,
because there isn't anything on the market today that is directly
comparable to
it. The only terms that make any sense when coming to a consensus about
the
dollar value of an SX-88, or most any other ham or shortwave radio of
the era
1930-1975, is its aesthetic appeal, and its place in electronic history.
The list
or street price of the SX-88 (or any other model) when new is really not
at all
relevant, since you can't make a direct, close comparison to a rig in
current
production. Performance isn't a primary consideration of absolute value
either,
since there are many receivers since 1955 that substantially exceed the
SX-88 in
all measureable specs. What we are left with is how attractive the model
is, its
relative importance as a piece of technological history, and to an
extent the
individual set's condition. Of course, if you were a 17-year-old new ham
in 1955,
you may have a certain nostalgia for this rig. There is not one thing

wrong with
that, and who can argue that nostalgia and emotion don't play a large role in
what we buy, and how much we pay for it. In a way that I can neither define nor
justify, I think these subjective measures are entirely appropriate and sensible.
The only problem is that my nostalgia is apt to be quite different from yours,
since I was 17 in 1979. Accordingly, I tend to be dewy-eyed about Drake C-lines
and TR-7s. Is a C-line worth $6800.00? Not yet, though one day it may be! But if
that day comes, and that price is paid, it won't be because of any cold calculus
of adjusted-year-dollars, or comparisons of new prices and that year's state-of-the-art.

I am hopeful that keeping and operating grand old radios will remain within the
reach of the majority of us who have an income of less than a hundred grand a
year. The worldwide market has a very short attention span, and is fickle. That
is in part at least balance to the finite supply of BAs. It is that finite supply
that alters and corrupts irrevocably the mantra the astronomical eBay prices are
OK because that is just supply-n-demand, that is just the free market, that is
just capitalism. Where things that have not been manufactured for over 30 years
are concerned, this marketplace bears closer resemblance to the market for
religious relics in medieval times than to modern capitalism. Do we all know how
honorable, admirable, and just that was?

de Will KD7BFX

If you analyze the situation, perhaps the price for this SX-88 ***IS A BARGAIN!!!!***

Well, let's see, in 1954 or 55 when the receiver was made a new car would be
$2,000 maybe. Now a much better, more durable and long lasting vehicle is maybe 10 times that.

Where I live my house was a new tract house in 1955 and cost $15,000. One of the identical houses with a very minor addition to it for extra space sold for $1,100,000 a month ago after being on the market for 3 days with multiple offers over the asking price. That's a price increase of over 70 times? Make it a 60X increase for an identical house since this one had a very minor addition to it.

Without looking up actual cost of living increases over that period of time, let's use 10X as a rule of thumb and be conservative to base our prices on.

This receiver is for all practical purposes "new" and maybe even better than new with some modern replacements for some components with limited life as a
result of our nearly 50 years of hindsight. Don't kid yourself, the Hallicrafters that were NEW during that era were nicely built but a bit of thick paint on the back panel wasn't unusual! Hey they couldn't even decide on proper knobs or color paint on many of their receivers and transmitters!

So, 1/10 th of $6800 is $680. This is equivalent to buying the receiver in 1955 for $680 then.

** Is that unreasonable? What did it sell for new? My 1955 handbook says $595 -- not that far from my ballpark equivalent of $680.

I'm sure that only a few were willing to pay that much for the receiver in 1955. My NC-125 which was a very expensive Christmas gift in 1952 when I was an SWL was ($109 with speaker -- dealer's price not retail) and my parents and I considered it a very expensive gift.

So, given the scarcity (not many made and few for sale just like houses around here) I think that though the price is astronomical, it may be more reasonable than we all want to admit. Items that are considered desirable and scarce these days demand a high price. We are exposed to these high prices due to the connectivity that the Internet provides with the worldwide market and the possibility of finding that "one person" with both the strong desire for that item and the money to pay for it. Something that was very very difficult to do in the "olden days."

If one were to use the same type of extrapolation, a Collins KWS-1 would cost $15,000 or more I'd suspect. Maybe rather than gripe about Hallicrafters prices, we should be buying up "mint" KWS-1s for the going price of $2,500 or so but here again there are more of them around than there are SX-88s!

I'm afraid as much as we'd like it be so, we "ain't in Podunk anymore!" we are now citizens of a vast world and the market is worldwide!

Complete AM Station For sale: Hammarlund HQ-170A-VHF Receiver, Multi-Elmac AF-67 Transmitter (160 to 10 meters), Rare PS2V Elmac Power supply, even rarer Factory cabling between PS and AF-67. All manuals, all work. On the air now. Good condition.
Just supply the antenna, mic, key, and antenna relay. Prefer to sell as a set $350.00.

Hallicrafters SR-150 Transceiver with PS150-120 Power supply. Power supply works, SR-150 needs some work but lights up, receives, and puts out power. With Original Manual. $200.

Rare Yaesu SP-980P Speaker patch excellent with original Manual and cables. $80.

Can deliver to the Atlanta Hamfest June 2 or 3 or will make arrangements to deliver or ship.

Reply via e-mail to thompson@mindspring.com

Better safe than sorry. Go to your local hardware store and get a "lead testing kit".
For about $3 you get some pieces of sensitive paper that you can test the equipment with.
Better than losing a lot of brain cells... or ending up with stunted children.

(ok, you all can start with the rebuttals now....)

2834. Heath V7A VTVM High Voltage Probe Question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-30 00:00:00 UTC

Source record: 65905

Does anyone have the specifics on what size resistor was used in the Heath V7A VTVM high voltage probe? I found a probe at a flea market with a 1090 Megohm resistor inside and am wondering if it will work.

Also, with a Heath HV probe, what is the factor used to read DC voltage on a V7A VTVM?

Thanks.

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment

I have in good condition two 212Z-1 Remote Amplifiers. These are solid state, 4 Channel AC or Battery operated portables in cases for on the spot broadcasts. Freq response 50-15KHz gain 90dB. These are excellent for AM Transmitters requiring line level audio input. Built in 400Hz tone for setups and program monitor for headphones. All XLR inputs and also telephone connections. With a really large VU Meter in the center makes it a real great addition to any station. $425 each plus shipping.

We are in the process of moving, and I ran across my first transmitter, a Globe Scout 65 bought from WRL in 1953. It hasn't been used since I joined the Navy in 1959, but it looks pretty good.

Are their manuals/parts available for it? Or, should I just throw it on the junk heap with other stuff?

Curious,

geo., K5AIE

Source record: 65908

Why don't you put it on the air. Books are readily available from dealers on the net (e.g. W7FG Manuals). Parts? No problem, really..especially tubes. The old rigs are worth money again and AM is popular! If its nice and you get rid of it, you may never find another similar one. Besides, its your old rig!!!

Source record: 65910

I'm VERY sorry to inform everyone that the second annual
CC-AWA Summer Swap Meet in Raleigh NC has been
CANCELED.

This is due in part to a scheduling conflict with the
NC State Fairgrounds and my trying to plan a meet in a city located
more than 3 hours away from where I live. It really makes it hard
to try to put everything together when it's that far away.

Hence forth, ALL CC-AWA swap meets will be required to
have a local person to handle the planning.
Our other 3 swap meets, Greensboro NC, Columbia SC and
Spencer NC all have local members doing the planning.
I will take care of sending out notices to the AWA and ARC
and posting them on the NG's and our web page.

We now have an opening for a swap meet in the summer of
2001. If anyone would be interested in hosting this event
please let me know. If possible I would like to have a firm
date and location by the first of September.

73,

Ron

Vern,

I just looked inside my Heathkit model IMA 100-11 HV probe, and it has a 1090 Meg resistor in it. The label says that it is X100 for 11 Meg input VTVMs. So, a 1000 volt source should read 10 volts on your VTVM - provided that it is has an input of 11 Megohms.

hope this helps,

Bill

Hello All,
I have a "new" SB receiver that needs some filters. If anyone has a CW and/or SSB filter(s) that they will part with please let me know. I do not have the exact part numbers but I think any of the 3395 KHz IF filters will work. Please let me know the condition and your price of what you have. Thanks very much.

2851. older mic cable WANTED!!

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-30 00:00:00 UTC
From: Sandy Gerli <angerli@home.com>
Message-ID: <39331D47.F6C3CB5F@home.com>
Source record: 65981

Hi, gang,

I need some of the older straight mic cable: about .25" OD, black rubber jacket, with one shielded/2 unshielded conductors inside: the shielded one is white typically, the other two are red and black. All are #20 or #22. This was usually the OEM cable for the Heathkit/E-V 638 and newer desk mics. Must have been common back in the '70s...just TRY and find it now...!

Does anyone have some of this I can get hold of? I have three mics with cracked, rotted cable I'd like up replace with some fresh stock. There must be some of this cable available somewhere. I cannot find a Belden number for this; it may not be made by them anymore.

I'd appreciate any suggestions. 73,

2876. Info Wanted: KW ELECTRONICS KW 2000 B TRANSCEIVER

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-31 00:00:00 UTC
From: "Dr. Edward H. Scissons" <psa@sk.sympatico.ca>
Message-ID: <xsdZ4.6135$eAM1.18612598@tomcat.sk.sympatico.ca>
Source record: 65856

I am looking for information about the KW ELECTRONICS KW 2000 B TRANSCEIVER.
I have heard of this rig but know nothing about it and have never seen one.
Any information appreciated.

Thanks.

Ed VE5VX

Source record: 65859

Hi All,
I have a Hallicrafters S20R for sale. It is all original, knobs, bottom plate, everything. I don't want to chopitup for parts as it is quite restorable. The only thing that I can see that is missing are the 2 strips on the sides. I believe that it is functional, but the buyer should put it on a variac to make sure that it doesnt fry. I have 2 photos that I can send to interested buyers. I am asking $80.00 for this vintage set. Email me directly for the photos at: nc183d@aol.com and see for yourself...The buyer pays shipping for this item.
rgds,
Mark S.

2880. FS: Hammarlund HQ-110 $85

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-05-31 00:00:00 UTC

Works just fine. Comes with original manual. Includes a neatly
installed product detector which allows CW and SSB copy with the AGC on
and the S-meter working (a great improvement if you've ever used one of
these receivers).

Pictures at:
http://myweb.accessone.com/~stockb/radios/HQ110frontrr.jpg
http://myweb.accessone.com/~stockb/radios/HQ110back.JPG

$85 plus shipping from Seattle.

(Please do not reply to me or to the list.
Reply to Robert. Thanks.)

Please be on the lookout for these military radios
stolen from Robert Downs,
"ROBERT W. DOWNS" <RWDowns_WA5CAB@compuserve.com>
Of Houston, Texas. Thanks!

Groups,

The following items were stolen from my storage building the night of
29/30
May 2000. If any of you see or hear of anything, including someone who
suddenly has a complete SCR-284 packset radio, please let me know. The
Houston Police Dept. Incident Number is 68850900-D.

SCR-284 packset radio consisting of:

BC-654 Receiver-Transmitter s/n 47775 with J-48 key and PE-104 Vibrator
Supply s/n 52186.

CS-41 Bag containing GN-45-A Generator s/n 10214

BG-58-A Roll (Bag) containing:
2 GC-7 Crank
LG-2-A Leg
2 LG-3 Leg
4 LG-13-A Leg
IN-106-A Insulator
MS-49 through MS-56 Mast Sections plus extra MS-49 and MS-50
15' W-142 Wire

BG-102-A Bag containing:
P-19 & HS-30 Headset
CD-501 Cord
RL-29 Reel with CP-12 & -13 Counterpoise
RL-28 Reel with GY-11 & -12 Guy
T-17-D Microphone Contract # 10612-Phila-44
4 GP-27 Stake
2 PE-104 Vibrator Supply s/n 12424 & 4431

CS-76-B Bag containing RM-29-A Remote Control s/n 2504
BX-31-A Box, Spare Tube & Vibrator (fully stocked)

SCR-694 and AN/GRC-9 components:

CW-140/GRC-9 Bag containing RT-77A/GRC-9 Receiver-Transmitter s/n 4726
(all
3 tags match)

BG-175 Bag

2 BG-174 Roll (Bag) (one WW-II and one Korean War style) each
containing:
6 MS-116-A Mast Section
2 MS-117-A Mast Section
2 MS-118-A Mast Section (missing from WW-II bag)
CD-1086 84" Cord
2 GC-7 Crank
IN-127 Insulator
LG-2-B Leg
2 LG-3 (WW-II) or 2 LG-3-B Leg
1 GP-27-A (WW-II) or 4 GP-27-Fr

For the four of you who noticed that there are three PE-104's with the
SCR-284, the two in the BG-102 are filling the space that should be
occupied by two BA-43 Batteries, which are made of unobtanium.

Date: 2000-05-31 00:00:00 UTC
From: mc@REMOVE.sover.net
Message-ID: <3934fa92.1786216@news2.sover.net>
Source record: 65931

I will be making a copy of my 1960 original TM11-6625-274-12 for a friend. This is the Operators and Organizational Maintenance manual for the TV-7(*) series tube testers. It will be a high quality copy including the schematic and switch chart which is not found in the Operators manual. It is from the Depot Maintenance manual but I thought it would be good to include it.

I am willing to make more copies while I am at the copy center as I am there anyways with the manual so if you need a copy please e-mail me. Cost will be $12.00 mailed in the USA. I will mail overseas but the postage costs will be higher depending on where it will be mailed to.

Cordially,

Michael Crestohl

Subject: CC-AWA Summer Swap meet CANCELED

I'm VERY sorry to inform everyone that the second annual
CC-AWA Summer Swap Meet in Raleigh NC has been
CANCELED.

This is due in part to a scheduling conflict with the
NC State Fairgrounds and my trying to plan a meet in a city located
more than 3 hours away from where I live. It really makes it hard
to try to put everything together when it's that far away.

Hence forth, ALL CC-AWA swap meets will be required to
have a local person to handle the planning.
Our other 3 swap meets, Greensboro NC, Columbia SC and
Spencer NC all have local members doing the planning.
I will take care of sending out notices to the AWA and ARC
and posting them on the NG's and our web page.

We now have an opening for a swap meet in the summer of
2001. If anyone would be interested in hosting this event
please let me know. If possible I would like to have a firm
date and location by the first of September.

73,

Ron

Subject: Collins 212Z-1 Remote Amplifiers for sale

I have in good condition two 212Z-1 Remote Amplifiers. These are solid
state, 4 Channel AC or Battery operated portables in cases for on the
spot broadcasts. Freq response 50-15KHz gain 90dB. These are excellent
for AM Transmitters requiring line level audio input. Built in 400Hz
tone for setups and program monitor for headphones. All XLR inputs and
also telephone connections. With a really large VU Meter in the center
makes it a real great addition to any station. $425 each plus shipping.

Subject: Globe Scout 65

We are in the process of moving, and I ran across my first transmitter, a Globe Scout 65 bought from WRL in 1953. It hasn't been used since I joined the Navy in 1959, but it looks pretty good.

Are their manuals/parts available for it? Or, should I just throw it on the junk heap with other stuff?

Curious,

geo., K5AIE

From: "D. S. Platt"
Subject: Globe Scout 65

Why don't you put it on the air. Books are readily available from dealers on the net (e.g. W7FG Manuals). Parts? No problem, really..especially tubes. The old rigs are worth money again and AM is popular! If its nice and you get rid of it, you may never find another similar one. Besides, its your old rig!!!

Subject: Heath V7A VTVM High Voltage Probe Question

Vern,

I just looked inside my Heathkit model IMA 100-11 HV probe, and it has a 1090 Meg resistor in it. The label says that it is X100 for 11 Meg input VTVMs. So, a 1000 volt source should read 10 volts on your VTVM - provided that it is has an input of 11 Megohms.

hope this helps,

Bill
KC0LE

Subject: lead in boatanchor paint?

Does anyone know whether the paint used on the metal front panels and
cabinets of boatanchors typically contains lead? If it does, is there
much of a hazard when either sanding the old paint off or using paint
remover solvent?

Date: Tue, 30 May 2000 14:42:10 -0500
From: "George R. Gonzalez"
Subject: lead in boatanchor paint?

Better safe than sorry. Go to your local hardware store and get a "lead
testing kit".
For about $3 you get some pieces of sensitive paper that you can test the
equipment with.
Better than losing a lot of brain cells... or ending up with stunted
children.

(ok, you all can start with the rebuttals now....)

PLEASE do! Those of us who are a bit to young to have lived through it can
get a sense of what it might have been like when we can see and touch some
of the real stuff. Who knows where that radio was in 1944?

That tangible, palpable sense of history that makes a difference in people's
lives comes from their ability to feel like they were there, and these
radios are bits of history that are vivid reminders.

Thanks to the posters who preceded me on this thread.

charset="iso-8859-1"

Thanks to Chris Cooper for the info on the B40 BFO valve, which is a =
CV303, equivalent to a EF22. My apology to the readers for my earlier =
sarcastic comment about a nil response. I'd forgotten that last weekend =
was a holiday weekend. Most people in their right mind would have been =
out enjoying the good weather, instead of being glued to a computer.

Regarding the P104 receiver, I do know that it requires a separate power =
supply, which connects via a cable terminated in a 6-pin Jones plug. =
This appears to be identical to the Jones plug as fitted to the Air =
Ministry R1155 receiver. There is a good chance that the Museum of =
Communication will have the correct power supply.

I'll keep you posted on developments at the visitors' centre for the =
Tall Ship at Glasgow Harbour. As well as a workshop facility, part of =
which will be a display, we hope to have a mock-up of a ship's radio =
cabin, dating from WWII. The Marconi CR100 will be used for this. To =
encourage a "hands on" experience for the visitors, it is intended that =
two listening booths will be provided, one probably with the =
aforementioned B40, and the other, with the P104, provided I can get it =
working.

Bye for now, and 73 from John GM0KTO

From: "W4DAS"
Subject: WTB: Heathkit CW and SSB filters

Hello All,
I have a "new" SB receiver that needs some filters. If anyone has a CW and/or SSB filter(s) that they will part with please let me know. I do not have the exact part numbers but I think any of the 3395 KHz IF filters will work. Please let me know the condition and your price of what you have. Thanks very much.

Doug W4DAS

Does anyone know K8BVJ (Jack Buccchieri)? We consummated a deal on some
merchandise 10 days ago. I was informed that the money was on the way,
and I have not received it nor heard from him since. I have sent him 4
e-mails with no replies...they have all gone unanswered. I notice he
has several listings on this group...I wonder if anyone else has had any
dealings with him. From my experience...I would recommend CAUTION and
BEWARE. Please e-mail any comments you may have on him privately, off
line.
Thanks,
Joe, W5LX

I just finished a transaction with Jack last week, where I bought a
piece of equipment. He answered all e-mail promptly, and did a fine job
of packing and shipping the gear, as I noted in my "GOOD GUY ALERT"
posting. I note the transaction's turned around the other way in your
case, though.

> Please e-mail any comments you may have on him privately, off

Subject: Crystals Needed

Now that I have my Viking II up and running, and no VFO, I need some FT243
crystals. I am looking for 3870, 3885 and 1925 kcs. Tried calling Peterson
Radio in Iowa but they must be on vacation. Anyone have some of these
frequencies surplus to their needs or know where I can buy them. I called
International and they told me that they no longer produce the FT243 style.

Regards,
Bob W6TR

Subject: Heathkit HX-10 "Maurader: question

Greetings,

I've recently acquired one of these which appears to be in very good condition. Anyone out there running one? I haven't seen many around on eB** or at hamfests so I'm wondering if it was a limited production item. Seems to work very well, but I would like to talk to someone who is still using one and find out if there are any "gotcha's" or quirks I should watch out for.

From: WB3KUM/9
Subject: Heathkit HX-10 "Maurader: question

I just bought a HX-20 transmitter and fixed station PS, same vintage. There is a matching HR-20 receiver and mobile supply. These are not rare, but were not BIG in the 1960's. Johnson, WRL, Hallicrafters and National were bigger sellers as well as a large amount of surplus WW2. SSB was JUST getting started and AM were still king. They will pop up regularly but infrequently on E-Bay, newsgroups, swapmeets, etc.

If you see a HR-20 receiver, don't confuse this with the HR-10 mate to the DX-60B, it will look simlar to the HX-10 and HX-20 with those all chrome knobs, give me a shout. I am working on the matching mobile

supply now.

Best of luck and 73's

They were 'Hand Crafted'. Dad sold Zenith back in the 60's when he ran a TV & appliance store. Best I remember, the early PC boards were prone to crack around the tube socket connections, due to the heat, I guess. They have come a long way since then...

Hey Pat,

You're to be commended for wanting a clean signal. The suggestion to pull half the modulator tubes was a good one for warm climates, but up there in Green Bay I'm guessing you want all the heat you can get in the winters. Therefore, my suggestion is a high level bistable multivibrator made from two 304THs and driven directly from the RF output connector. This will divide your sidebands by two, resulting in halving your bandwidth. It will also give you that Big Testosterone Sound. Since this is a bistable circuit you'll want to drive the plates with alternate half-cycles of your HV secondary for the best neutralization and purity.

73,
Mike, KK6GM

Mike,

Your theory is flawed. Because you are cutting the bandwidth in half, the heat from the finals will also be cut in half, which as you pointed out may not be desirable. Your idea sounds good on the surface but I am not sure it will accomplish all that is intended. Of course the multivibrator will increase the efficiency (reason for the drop in heat) but this will only work properly if the ac power phase is connected properly.

Subject: Raytheon RL-10 Program Limiter

Hello All,

Was wondering if anybody has any information
on this rig. I recapped it and got it running. Looks
like the thing can crank in about 30 db of limiting
and is balanced in and out. Vintage lineup, P/P 6J7'S
P/P 6SJ7'S to P/P 6F6'S. A 6H6 sends control voltage.
Adjustable "Recovery Time" of 1 to 5 msec. A multi-meter
switched to read the KATH. "voltage" of all 6 active tubes
and a position for "limiting" in DB. Rack mount with
a medium dark brown 19"X14" panel with a removable insert
panel that lets ya get at the tubes. It's so UGLY I have
to put it on-line!! Any info greatly appreciated.

Subject: Swan HF-700-S SSB Transceiver Schematic

We own a Swan HF-700-S transceiver; however, the manual is missing pages 22 & 23. These are the pages that contain the schematic diagram of this unit. Can someone help?

Thanks,

John Steffes

I've been selling on Ebay for over three years.
My "no pay" rate is about 12%.
In three years I have never, ever had a sale
that went over $200 go unpaid.
Maybe I've just been lucky.

Kind Regards,
Dave Stinson AB5S

Subject: Want: Old "K3PVL Print" QSL Cards (1960's)

Hi,
Just wondered if anyone has in their possession any QSL cards printed by K3PVL? These cards would be fairly plain in design and would have been printed in the early to mid 1960's. I believe the words "K3PVL Print" was at the bottom center of the QSL card. The reason I'd like to get a couple of them is that my dad was K3PVL and he had a small QSL card printing business at home in Pennsylvania when I was a kid and thought it would be nice to have some as a souvenir of his work and to be able show him again now that he is in his 80's.
Thanks,
Jack

Guys,

Another way to look at this auction was that there were 4 other people willing to pay $4,000+ and three others that went over $2,500 for this item. I know that at every hamfest I visit for the next year, I will be looking under the tables for that elusive trophy boatanchor, to clean up, and sell on Ebay, to help defray the costs of my kid's college education!

Great Thread!

==========
Folks there are collectors out there who know what they are doing. One bidder I know of has bought thousands of dollars of Hallicrafters gear, manuals etc. They will pay a premium for near new radios and very rare items. I suspect in a few years they will sell it for a lot more. Or open a museum -- who knows.

Some fodder for the Auction Bashers.
The first Texaco Airplane Model sold for 19.95 (5 or 6 years ago -- now $192.
Sun Records Elvis Presley Singles Set -- $51
20+ Assorted New In The Box Barbie Dolls -- $525.00
57 Chevy Convert -- $35,000
Lieca IIIB Camera $342
Johnson Invader -- $4200
Hammarlund HQ-180 Shortwave Ham Receiver -- $1775.00
ATWATER KENT #735 CATHEDRAL -- $665.00
Atwater Kent Variable Condenser 1923 --- $617.78

Nikon S2 with 5cm, 1.4 Nikkor S-C with case. -- $1,030.00
Schwinn Black Phantom Bicycle Classic Bike -- $1125 and its a 1995
reproduction
Schwinn whizzer bicycle -- $2176.00
40's or 50's Zippo Gift Package lighter mint! -- $465.00
MICHAEL JORDAN UD FINAL FLOOR AUTOGRAPH 19/23 -- $3,605.00
Babe Ruth Autograph.....100%..REAL....MINT -- $475.00
All these can be verfied on E-Bay except the 57 Chevy -- my buddy bought
that one!!

If you don't understand the world of collecting -- don't knock it. But I'll
bet the next time you see a Hallicrafters, National et al at a garage sale
for $15 -- you get educated real quick!

The auctions are a mecca for collectors -- it allows collectors, sellers,
buyers to find sought after items WORLD WIDE. How long would you search for
an Hallicrafters Model SX24 in your home town??

I am not a collector but Auction Bashing is "Free Market Bashing" IMHO

Subject: WTB: Clock with cover for HQ-145 (interchangeable?)

The clock on an HQ-170 I had was put on an HQ-145. I also bought a
loose one at a fest and it fits the 180, 170, 150, 145... so one could
surmise that they're fully interchangable.
